Showing the Wonderful Progress of 150 Years

A hundred and fifty years ago, when the stage-coach horn still echoed through England, and a young, unknown planter named George Washington was hunting foxes or surveying land in His Majesty's colony of Virginia, there appeared in three modest volumes a book which was destined to exercise a great influence throughout the world-a greater influence than any other one work in the range of English letters.

It was called "The Encyclo-paedia Britannica" and was prepared, according to its title page, "by a Society of Gentle-men" who were, incidentally, eminent scholars in their time.

The Origin of Encyclopaedias These men not only origi-nated the plan on which the Encyclopaedia Britannica was

built, but the very idea of an encyclopaedia, so familiar to us today, is the result of their work. What they planned was essentially an educational work -a new method of bringing the knowledge of specialists in cor-rect and scholarly form to the general public. The idea was revolutionary in its day, and its success has been an important means of diffusing education for 150 years.

Up through the decades this book has advanced, always ahead of the times, always entertaining, always absolutely correct in its statements. How successful both the idea and the book have been is shown by the fact that the reputation of the Encyclopaedia Britannica has steadily grown through 150 years and is greater today than ever; that the sale of each edition-and there have now been no less than eleven-has been greater than that of its predecessor, and that the total sale has been larger than of all other encyclopaedias in English, French, German, Italian, Rus-sian and Spanish combined.

Features of the Britannica The Britannica has lived and succeeded as a result of the the heavy books into light and easily-handled ones. India pa-

sorry to state that on account of the higher cost of all materials for the making of books, the Publishers are obliged to increase the price to us, and we to the general public. The present low prices will, therefore, be advanced by from one to three monthly payments (from \$3 to \$9), according to the binding, on or before December 20th.

How long it will be possible to maintain these new prices without another increase is uncertain. In any case, if you wish to purchase the Encyclo-paedia Britannica ("Handy Volume" Issue) at the present low prices, act at once.

way it has always been made: because it was written by the highest authorities, each in his own branch of knowledge; (2) because it appealed alike to the scholar and the general public, to the educated and those who wanted to be educated; and (3) because its publishers, editors and contributors have always considered it an educational institution, not simply or solely a money-making production. In fact, it is only because scholars and writers every-

where think of the Britannica and as an educational work that it making of books. is possible to secure ascontribu-

tors the leaders of thought the world over. From the time of the First Edition of the Encyclopaedia Britannica (1768) down to the resent, each edition has been larger than its predecessor. This has naturally been so, for the increase in knowledge during the past one hundred and fifty years has been unprecedented. As the work grew larger and larger, with the inclusion of more and more material about every topic under the sun, not only did the number of volumes increase from 3 to 29, but each volume naturally became bulkier and heavier until it became so large and cumbersome that it required some

Then it was that the publishers of the Britannica hit upon the invention of a thin India paper which should transform

per revolutionized the making of these books.

Its thin, tough sheets reduced the thickness of the volumes by two-thirds and the weight from 8 pounds to almost that of the ordinary magazine. At the same time the opaque quality of the paper throws the type up distinctly, yet prevents it from showing through on the other side.

In short, India paper was, as a prominent clergyman described 'an inspiration of genius," its use revolutionized the

There remained but one step more to bring the Encyclopaedia Britannica, with its wealth of information, within the reach of every one. That was a reduction in the price, so that the average man or woman, with the average income, the young man just starting in life, the wife and the daughter in the home, each might possess this work.

Published in Two Forms

This marvelous work is published in two forms-the high priced Cambridge Issue and the popular "Handy Volume" Issue. The Cambridge Issue (which has been called the "rich man's book") is printed in very large type, on large nages, with extra wide margins. This is substan-tially the same form in which the Britannica has been published since *768—148 years. The pages are 8% inches wide by 11% inches deep. This issue makes a splendid appearance in any one's library. The Cam-

less than 1500 sets are left.

Making it Available to All The original object in pub-lishing the "Handy Volume" Issue was to produce this great Issue was to produce this great library of knowledge at a pop-ular price, making it available to every person who has need of it. But its convenient form and ease of handling, even more than its low price, have been responsible for its tre-mendous sale. In six months, 75 000 sets have been sold.

75,000 sets have been sold. This "Handy Volume" Issue is identical with the Cambridge Issue, except in the size of page and type. The pages are slightly smaller and the margins narrower. But in its contents it is precisely the same—page for page, line for line, word for word—as the high-priced Cam-bridge Issue. Every plate in colors, every illustration, every map, is identically the same. It is also printed on genuine India paper. The "Handy Volume" Issue is sold exclusively by Sears, Roebuck and Co., of Chicago.

The Scarcity of India Paper India paper is made from a kind of flax grown in Germany, Belgium and Ireland. The war ended the getting of any flax from Belgium and Germany two wars are and the embarge two years ago, and the embargo of the British government has cut off all supplies from Ireland. The result is that no more India paper can be procured for years to come, for even should the war end tomorrow, there are other and more important crops

to be grown than flax. Every set of the Encyclo-paedia Britannica that could be made on India paper has now been made; when those on hand are taken, as they will be in the very near future, the work can no longer be purchased. We strongly advise, therefore, all who wish a set of this greatest of all reference works, in either the high priced Cambridge Issue or the popular "Handy Volume" form, at a saving of 60% in price, to order a set at once.
