## OES ANY WORTH-WHILE WOMAN LEAD A SHELTERED LIFE?

Jares From Which Jane Austen's Heroines Were Shielded Courted by the Modern Girl-The Folly of Always Being Late

THERE any such thing as a "shelred" life? A girl who for several years had been out in the business world rried a short time ago, and in discussthe marriage one of her friends said believed that, although she was fond of the man, her main reason for taking the step was her desire to lead a sheltored life.

But isn't a sheltered life, as we interpret it, rather out of the picture of the ern woman? Who wants to lead the rapid existence of a mid-Victorian peroine, shielded from the hard knocks would receive in the world, but denied well many of the privileges of a freer

This young woman who married held a good position in an office. Her work was teresting, if exacting, and she received a fair salary. The man she is marrying is a clerk, working at a livable wage. But he is just that, a wage-earner, and probably never will be in the salaried class. She will be obliged to do her own house work. She loves it and has many plans for her little home. Then there will be babies. And suddenly it will come to her that this so-called "sheltered" life is not all "beer and skittles," but a conglomeration of Irish stews and fried eggs, with a generous sprinkling of milk bottles.

She will wonder how she ever imagined her life a hard one when she spent eight hours in an office and had her evenings, Saturday afternoons and Sundays to herself to do with what she pleased. But, after all, she will tell you it is

being a "10 o'clock scholar," her friends will not take her at her word, but at her reputation, and actually plan for that well-known ten-minute lapse. It always seems the height of absurdity not to tack those ten minutes on the first part of the day and so catch up.

Several days ago a number of us had planned to meet at 6 o'clock for dinner. Knowing the reputation of one man for always being behind hand, that man was told to be there fifteen minutes in advance of the others. Then plans were changed slightly, and the meeting was Herbst. ## COOK, DIG OR FIGHT, GIRLS' WAR SLOGAN

Two Berks County Maidens Offer Their Services to Uncle Sam

HAVE PARENTS' CONSENT

READING, Pa., Aug. 10. The first girls from Berks to offer their services to the Government for actual service in the army are from Bechtelsville. They are Alice M. Herbst, 17; and Martha Mary Pennypacker, 23. Both have the

consent of their relatives to go to France.

The girls are not looking for ornamental jobs or for places where there will be no danger to them personally. They are willing to go right to the front, not to remain in towns at the rear. They do not seek positions in the hospital or Red Cross service. They are willing to take any assignment in actual service. They will cook, dig or fight. Both are willing to handle weapons, if necessary, although they admit the deadliest equipment they have handled thus far is pots and pans, knives and forks and other fixtures of the kitchen.

Both are descendants of German famil lies, but they want to help to hammer the Kaiser, they say. "Some one must do the unpleasant work that women can do. We can cook, bake, wash dishes, scrub and do lots of things that will not be dignified, but will be mighty useful," Miss Pennypacker said. "I would be willing to cook a sample dinner for President Wilson to convince him that he ought to let us go."

Both wirts are employed in a kritting

Both girls are employed in a knitting mill, but have been thoroughly trained to cook, bake, wait on the table; sew, clean house and do other work that housewives must do. Miss Pennypacker says American wome

#### U.S. WOUNDED TO BE TREATED IN FRANCE

None to Be Sent Back to This Country, Army Medical Officers Plan

AMERICAN TRAINING CAMP IN FRANCE, Aug. 10.

All of the American wounded will be treated in France and none will be sent to the United States, according to the pres-ent plans of the officers in charge of the first expeditionary force. The closest cooperation between the army medical corps and the Red Cross is already assured. The health of the Sammees continues un-

usually good. A medical report just issued shows but 2½ per cent sickness in cam; although the average was 5½ per cent when the men were back home. The all-ments that have made their appearance are trylal. They include mostly mumps, measles and colds. Jellied consomme or bouillon should be served in bouillon cups and eaten with a bouillon spoon or a teaspoon.

The shortage of the personnel of the medical corps is noticeable. There is but one medical officer with eleven assistants for every 800 men. For the same number of men in the French army there are two 3. It is not good form to use side dishes for vegetables at a dinner. medical officers and thirty-seven assistants. Both the British and French had the same difficulty at the beginning of the war but soon remedied it.

This is a most unusual request. Gray hair is very beautiful and becoming, but most persons are content to let nature take her course in the matter. If your hair begins to turn gray, frequent shampooings with ammonia in the water will make the change more rapid. A few drops of bluing in the last rinse water will also prevent it frem having a yellowish tinge.

## IN THE MOMENT'S MODES

Fall Sweater Models Show Many New Ideas

Fall sweater models are beginning to appear in the costume shops, adding further emphasis to the fact that the sweater has become an all-year-round article of the wardrobe. Revealing, too, that sweater styles change with each season—change so radically that in order to keep within hailing distance of the mode one must acquire a new sweater not less than twice within a year. The fall model pictured in today's drawing is of pure silk in Nile green shade. The girdle begins in the back as a belt, then becomes a sash, drapes around the waist, crosses in front and then goes back to tie in the back. The peplumlike arrangement of the skirt gives considerable fullness over the hips.

The one-button collar closing is distinctly new.

#### The Daily Ration

The amount of energy required by the body varies, of course, with the season, with the weather and with the amount and kind of work done. Hard physical work and exposure to low temperature demand the largest food supply. A person whose occupation is indoors in a temperature virtually that of summer does not require more food in winter than in summer. Any one who perspires very freely needs a larger amount of food than the average, because of the large amount of heat carried
