

“They Have Built for Us Again and Again”

THE manager of the modern industrial plant demands rapid construction, well-controlled costs and good work. When a constructor is asked to help a great plant in its general development year after year it is clear the demand has been successfully met.

We illustrate our thirty-first job at the main works of the YOUNGSTOWN SHEET & TUBE COMPANY, placing the foundations of the new by-product coke plant. The owners have recently expressed their satisfaction with our service as follows:

“Stone & Webster are organized to take care of everything, and are equipped to do almost any kind of construction work with speed and economy. We aimed to avoid trouble by centering responsibility for a wide variety of work that might have been parceled out among several contractors, and the results surpassed our best expectations. They have built for us again and again.”

Our experience of 30 years as a construction organization shows that satisfaction is best assured if we work *with you* rather than *for you*, and if we begin when your plans for new plant or additions are first taking shape. Any of our offices will be glad to give you full information.

STONE & WEBSTER.
