

Knitting the World's Underwear

Another Philadelphia Industry Paces All Other Cities

From the blanket-weight itchy woolens that warm the Siberian to the feather-weight balbriggans that make the tropical sun endurable—

All are products of Philadelphia's endless knitting mills.

Her gigantic output (24 million garments) exceeds any other city of the country, and includes every kind and quality of knit underwear.

Remember this, Mr. Philadelphian—you who are about to change your light balbriggans for the extra warmth of winter garments—

Be sure that those you buy were made in Philadelphia, and give a real, material indication of your pride in the industrial supremacy that has made Philadelphia the "world's greatest workshop."

And you, Mr. Philadelphian—who may be a factor in this great knitting industry—remember that Drip-Lak, the textile lubricant that cannot possibly drip, throw or creep from bearings, is a Philadelphia product also.

It completely discounts all losses from oil stains and needle marks; in fact, it does many things that are exclusive and constructive, but its greatest work is to symbolize Crew Levick service—a service that for fifty-seven years has striven not just to make the best lubricants, but to search out special compounds like Drip-Lak, that the wheels and bearings of Philadelphia's industries might run smoother and faster and produce a better product.
