# MRS. WILSON CONTINUES HER EXPLANATION OF FOOD

And Describes Anise Seeds and Artichokes in an Interesting Manner-The Apple Is Good for You and Always in Season

By MRS. M. A. WILSON Convertisht. 1991, by Mrs. M. A. Wilson All rights reserved.) All afford a splendid variety from which to choose. If apples are wrapped in paper and stored on a ventiated she'f, they will keep many weeks in and their uses is no longer a fad cold weather.

of the epicure and the dictante, but a positive necessity to the busy house-wife, who must needs be brief in her daily tasks if she is to successfully ne-complish much that is so vitally neces-tion weight the transformation of the second second

sary today. Anise seeds are the minute seeds of an annual plant, cultivated in many parts of the civilized world, particularly in Spain. Egypt and many countries

of an annual plant, cultivated in many parts of the civilized world, particularly in Spain. Expot and many countries adjoining the Mediterranean sea. It is also raised in China, from where a pe-culiar star-shaped species is exported-it is known as the Chinese anise. The anise seed, as well as the Chinese va-riety, is used in fancy bakeries, for sirups and flavoring, as well as for sirups and flavoring, as well as for cordials, particularly about Christmas and Easter festivals. Apples. Modern methods of cultiva-tion today have brought the baselous applex to perfection. Its story is founded upon successful horticulturiar work, upon the original wild or erab apple. The wild or erab apple is the bicious fruit that graces the market tweive months of the year. Apple con-tains an abundance of mineral salts, and the malic acid content of the apple is of greatest value to persons of seden-tary habits.

habits.

ry habits. Its sparkling juice surely combines and ground very fine, packed into airthe glow of sunshine with the pristine tight entis and sold in markets as arthe glow of sunshine with the pristine glistening of winter foost, it is a won-derfully invigorating juice, abundantly supplied with phosphorus. The apple is a member of the rose family, related to the pear and quince and yet of a most matitive character. The apple is indigenous to the temin other numbers, similar to our own

perate zone and because of its general Artichokes. This plant resembles the usefulness and varieties, it is given a thistle and is cultivated for its flowery
