Suspect Confection May Contain Poison—Said to Be Drug Addict

Woman Wields Gavel

State and county leaders arose and applauded in the Court room as Mrs. Warburton sat escorted to the chair.

Only One Objector

The resolution also provided that the chairman shall be recognized in the matter of appointments and State patronage and that she shall be the only member of the Republican women of the State.

Governor Greets Women

Governor Sproul, addressing the committee said: "I am glad to preside over this historic gathering, and I regret the enforced absence of Chairman Cowgill, who has rendered such service to the State, and also the absence of the 'elder statesmen' who are detained in Washington."

What State Committee Is; Duties of Women Members

Under the party system of government, State Committee members derive their importance from the influence they exert in the councils of their party and indirectly in the administration of the Government itself, if their party is in power.

STATE PARTY LEADERS—1921 MODEL

Today's meeting of the Republican State Committee brought men and leaders together on a party. One interesting group, from left to right, shows Mrs. Barclay Warburton, chairman of the State Republican Women's Committee; Governor Sproul and Mrs. Leonard Woods, of Pittsburgh, Pennsylvania's woman member of the Republican National Committee. Mrs. Woods is not related to Major General Leonard Wood.

NAVAL JEALOUSIES HANDICAP AIRCRAFT IN BOMBING TESTS

Triumph of Airplanes Would Check Building of Battleships

ALSO WOULD STRENGTHEN PLEAS FOR DISARMAMENT

By CLINTON W. GILBERT Staff Correspondent Evening Public Ledger Copyright, 1921, by Public Ledger Co.

Washington, June 18.—The test of aircraft against naval vessels, which began this week and will be continued at intervals next month, may be vastly important in their effect upon aircraft development in the future, and upon disarmament and upon the question of the value of the battleship.

The first tests against submarines will be of an great importance. The great war proved that the submarine was a useful weapon against the undersea navy, not a highly effective weapon, but there is no one weapon which is highly effective.

The test of the bomb-carrying plane against cruisers and battleships is the highly important one. In these, the question will be presented: Whether aircraft can locate a warship sailing alone on the ocean, whether the aircraft can hit the vessel with a bomb while it is underway, and whether a bomb hitting the vessel will sink it. The last test is twofold, whether bombs can sink a battleship and whether they can sink a less armored vessel, a cruiser.

For the test of finding and hitting a moving battleship the old Iowa will be used, without a crew, proceeding under steam and unattended and controlled by wireless from the battleship Ohio.

Game of Hide-and-Go-Seek The Iowa will sail the sea somewhere between Cape Hatteras and Cape Hatteras. Both army and navy aviators will search for the vessel with the purpose of seeing whether she can be hit by bombs will be used, there being no intention to take the risk of injuring or sinking the Iowa.

For the purpose of finding out whether bombs will sink cruisers and battleships, two German war vessels, the Frankfort and the Ostfriesland, will be employed. They will be located in the ocean, and the question solely is whether bombs dropped on them from the air will sink them.

The aircraft will first attack the cruiser Frankfort with bombs of various sizes, of which the largest will contain 400 pounds of TNT. After each raid the size of bombs, the Frankfort will be notified, and the effort will be to see whether the bombs will do the damage bombs of each size will do. It is generally expected that 600 pounds of TNT will sink the cruiser.

Against the Ostfriesland the first attack will be with bombs of 200 to 300 pounds, the second is 300 pounds of 500 to 600 pounds, and the third is 600 to 1000 pounds and the fourth with the largest available bomb, one containing 1000 pounds of TNT. The only way, in some cases, to sink a battleship is to drop 1000 pounds of TNT on the deck of the old Indiana, without sinking her. The Ostfriesland is a more strongly armored ship than the Indiana.

Test Would Not Be Final But detailed bombs will strike more vulnerable spots than one carefully placed on the deck. For example, a bomb exploding in the water close to the side of the battleship would probably penetrate her water below the belt of armor, and if it did, it would hit the boiler room from above, and it is still to be demonstrated that 2000 pounds of TNT striking on deck will do the same as a bomb of 1000 pounds striking on the side of the ship.

Conditions laid down for the test have to favor mainly the ship against the airplane. For example, the ship is made rather more difficult than it would be in the case of war. Airplane engines, and so on, would be repaired in the air, and the search for the ship would be made by a search plane, which would be used to discover that a single battleship was in the area, and so on. Moreover, it is provided that aircraft dropping bombs must be at a height of 1000 feet above the target, so the flyers can see the target, and so on. If the ship is to be safe from anti-aircraft guns, it is to be demonstrated that 2000 pounds of TNT striking on deck will do the same as a bomb of 1000 pounds striking on the side of the ship.
