

RADIO IN THE HOME

By HENRY M. NEELY

With the apparatus shown in this illustration a storage battery can be kept in good condition for a number of years. To the left is a "rectifier," by means of which you can charge your battery by plugging an electric light socket; next to the storage battery hooked to the charger, next to that is the hydro-meter syringe, which will tell you the condition of your battery at any time, and next to that a bottle of distilled water which should be added to the solution about once a week to keep the plates of the battery immersed.

Your Storage Battery Needs Attention
Once you have your "B" battery installed in your set and properly hooked you will not have to bother much with it so long as the electricity that gives energy to have plenty of "kick" when the electricity ceases to be going through there is only one thing to do—throw the battery away and get a new one.

Fortunately, though the plate of your battery bulb requires a powerful current, it uses very little of it and a "B" battery ought to last you for six months or more.

The storage battery, however, is a different proposition. Here we have a piece of chemical mechanism which is called upon to deliver quite a heavy current, to give a good deal of power and to give it steadily in a long service.

The dry cell is not fitted for this strenuous work and, while four dry cells hooked together will give you fairly satisfactory service in lighting your set for a short time, they very soon reach a point where the service becomes most undependable. Though there may be a good deal of life left in them, it is not the kind of life that will do for your purpose.

Four dry cells at forty cents apiece make \$1.60, and I doubt if they would last more than a week with any efficiency left at the end of that time. They would not take many weeks at this rate to cover the cost of a first-class storage battery.

With the storage battery you will have three very great advantages. First, the current you draw from it is steady and just the kind of a current you want for radio purposes; second, it will stand up efficiently many times as long as the dry cell third, when the charge is exhausted it is an expensive matter to have a new charge put into it or put one in yourself by hooking it up with your house lighting current and it is ready to begin all over again.

NEW ROADS FOR AUDUBON

Six Street Ordinances Pass Borough Commissioners

Good-road advocates of Audubon, N. J., had their fining at the meeting of the Borough Commissioners last night. Six ordinances, for the concreting of streets within the limits of the borough,

The man who puts the bubbles in it
You have perhaps noticed the silvery bubbles in Clicquot Club Ginger Ale and that they stay in it a long time. "Putting in the bubbles" is an important part of making Clicquot. The spring water, drawn from the bed-rock through aluminum pipes, is quite cold but not cold enough. By refrigeration, the temperature of the water is forced down almost to freezing. Then the water is carbonated. That's what makes Clicquot so lively, so full of sparkle. Warmer water would not take the carbonation so well, nor would it hold it so long after the bottle is opened. So the man who puts the bubbles in Clicquot watches the thermometers and keeps the temperature just right. And every part of the making of Clicquot Club is just as carefully guarded. No ginger but real Jamaica ginger is used, only pure cane sugar sweetens it, and the happy blend of Clicquot is made with the addition of fruit juices. No wonder they all like it. Order Clicquot Club Ginger Ale by the case. Should you desire a change in flavors at times, you can get a mixed case with Clicquot Ale, Sarsaparilla, Birch Beer, and Root Beer.

Clicquot Club GINGER ALE

THE CLICQUOT CLUB COMPANY, Millis, Mass., U.S.A.

Today's Programs

Philadelphia Station (WPT) (Strawbridge & Clothier)
1:15 P. M.—Public Ledger radio news bulletin.
3:30 to 4:30—Concert by Strawbridge & Clothier Male Quartet (John Owens, Edward Lewis, Harold Simmons, John Vanderloot), assisted by Lorretta Kavanagh pianist.
5:30 to 6—Baseball score.
Evening concert beginning at 8 o'clock—Fannie Blumstein, soprano; Harry L. Geller, clarinet; Harry L. Geller, alto; phone; Louis J. King, cornet; Edward Hoeller, trombone; Joe McCarthy, drums and traps.
8—Recital by Daisy Jean, Belgian cellist, harpist and soprano, accompanied by Jean Wisniewski.
Philadelphia Station (WIP)
(Gimbel Brothers)
1:45 P. M.—A varied musical program.
2:30—Recital by F. O. Barock, dramatic baritone, assisted by Mrs. Frances Babcock, pianist.
3—Dance music.
3:30—Final baseball score.
7:15—"Uncle Wip's" bedtime stories.
7:30—"Uncle Wip's" radio call of children writing to him.
Newark, N. J., Station (WAZ) (Westinghouse)
6 P. M.—Review of the iron and steel industries and their relation to general business conditions.
7—Animal stories, by Florence Smith Vincent.
7:30—"Interpretation of Drug Labels," by Dr. Robert Hubbard, Bureau of Chemistry, United States Department of Agriculture.
Concert by the Original Keystone Symphonians: Billy Bacon, Jr., piano; Howard Carroll, bassoon; John Smith, violin; Bob Geller, clarinet; Harry L. Geller, alto; phone; Louis J. King, cornet; Edward Hoeller, trombone; Joe McCarthy, drums and traps.
8—Recital by Daisy Jean, Belgian cellist, harpist and soprano, accompanied by Jean Wisniewski.
Pittsburgh Station (KDKA) (Westinghouse)

INCOME TAX DUE

Tomorrow Last Day to Meet Second Installment
Pay that Income Tax!
Tomorrow is the last day on which the second installment of Federal income tax can be paid without a penalty being imposed.
Blakely D. McCaughn, Collector of Internal Revenue, reports the returns for this section are coming in very slowly, and that he expects a rush of payments at the Federal Building.

Uncommon Sense : The Mind Is Burglar Proof

By JOHN BLAKE
WINGS, as has been observed for many centuries, take wings. They depart in various ways. Sometimes they are dissipated by those who acquire them, sometimes they are squandered by their inheritors. Often they are taken away from those who possess them by gentlemen with scheming minds and designing plans to do that sort of thing.

Very recently a man who operated a racket-shop in New York was sent to prison as a common thief because his reputation consisted in taking away from his working people the fruits of their labor.
There are many other persons in the world still at large and pursuing this same business. Some of them are hold-up men and burglars, some are swindlers and some are people who pretend to be business men, but really are sharper in disguise.
Everywhere are ways to take away the hard-earned money that others have accumulated. It is all very wrong, of course, but unhappily it is the way of the world.
There is one absolutely safe investment which no one can steal or flick or blow just back of the eyes of the young man or woman who knows the best way to invest his or her money.
That investment is in education or training, whichever you please to call it.
No robber can break into the brain
