Yesterday

49 in 50 suffered tooth troubles. Dingy teeth were almost universal

This was the situation which has existed for years. Tooth troubles were constantly increasing, despite all care. Very few escaped them. Beautiful teeth were seen less often than today.

The reason lay in film on teeth-the cause of most tooth troubles. No ordinary tooth paste can effectively combat it. So the tooth brush left much film intact, to night and day threaten serious damage.

How film ruins teeth

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film.

Film also holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Thus the beauty of teeth and the health of teeth were constantly attacked by that film.

New combatants found

Dental science then made a search for effective film tombatants. Eventually two ways were found. One acts to curdle film, one to remove it, and without any harmful scouring.

Many careful tests proved these methods efficient. Authorities endorsed them. Then leading dentists everywhere began to urge their use.

A new-type tooth paste was created, based on modern research. In five great ways it brought effects which old ways did not bring. Then these two film combatants were embodied in it. The name of that tooth paste is Pepsodent.

Today

Pretty teeth are seen everywhere. Millions are fighting film

Now millions of people have adopted that new teeth cleaning method. The results are seen everywhere, Look about you at the glistening teeth.

So it is almost the world over. Careful people of some fifty nations have discarded old ways for the new. And largely by dental advice.

Other new effects

Pepsodent also brings other effects which research proved essential. It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

It multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay. It was found that old tooth pastes, based on soap and

chalk, brought just opposite effects. That was one reason why they proved so ineffective. Pepsodent polishes the teeth so film less easily adheres.

Pepsodent, with every use, multiplies these natural tooth-protecting agents. Then those forces wage a constant fight against tooth enemies.

Watch the new results

If you don't know these benefits, we urge you to make this test. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

That test will be a revelation to you. The results will amaze and delight. Then you will know that you and yours can protect the teeth in better ways than now, Cut out the coupon so you won't forget.

repsodent
