Can You Tell?

Sending Invitations

Dear Madam—I am having a Halloween party and I am going to send written invitations. I would appreciate it if you would be so kind as to tell me a nice way to decorate the note-paper and word the invitations. Please tell me the meaning of the name Madge.

The yellow correspondence cards, and put a row of witch and black cat stickers across the top. The invitations may read, "You are cordially invited to be present at a gathering of the witches on the night of October 31." Also put "H. S. V. P." and your address on the card. Madge is a nickname for Margaret, which means a pearl.

Wants Lively Games

Dear Madam—Would you kindly tell me through your most helpful column a few good, lively games to be played at club meetings for boys and girls, and also some lively games to play during the meetings. I have the names of a number of children which I will fully appreciate. DOROTHY E.

If you'll send me your full name and address on a stationery card, with a request for the kind of games you want, I'll surely see that you get them. I have a very good list, with directions for playing each one. It is too long to publish here.

What Makes Rain? Rain is the vapor of the clouds which, becoming condensed by a fall in temperature, forms into drops of water. In other words, rain is simply the return to the earth in the form of water of the moisture which has been absorbed by the air in the form of vapor or clouds.

The nearer one gets to the Equator the heavier the fall of rain. This is because the hot air absorbs a great amount of vapor. Rising into the higher regions of the atmosphere, the vapors are suddenly condensed by the cold currents from the poles into heavy rains. Sometimes, although rarely, we get rain without the presence of clouds. This is caused by a sudden change in the weather from warm to cold, which causes the moisture of the air to fall to earth without the presence of cloud formations. Some parts of the earth are rainier than others, due to the fact that they are situated in tropical or torrid latitudes, and at a great distance from the ocean, so that the atmosphere in these places is naturally in a continually dry state. Mountain localities are more rainy than flat ones, because the mountains attract the clouds. Also the clouds that are flying low over the mountains are driven by the wind to meet with cold currents of air.

It will be great fun finding the most becoming one in the lot.

An elastic section down the back contributes pliability. Made of plain coutils and figured broches in topless or medium-bust styles. Fittings without charge.

They have such large collars and cuffs of the popular black furs—and they are so luxuriously lined either with jacquard-figured crepes or plain peau de cygne or crepe de chine. The fur is mostly the Manchurian wolf-dog that is nearly as soft and even more durable than real wolf. Some coats have caracul fur collars.

The other coat pictured, at \$58.50, has elaborately embroidered back and sleeves and is trimmed quite extensively with black fur. Other new fur-trimmed coats are \$25 to \$65—made of bolivia, velour or llama cloth. Mostly in black, brown or navy.

Chinchilla coats, \$16.75 to \$27.50.

More of Those Fine Natural Muskrat Sports Coats at \$125

Seal-Dyed Coney and Natural Marmot Coats, \$90

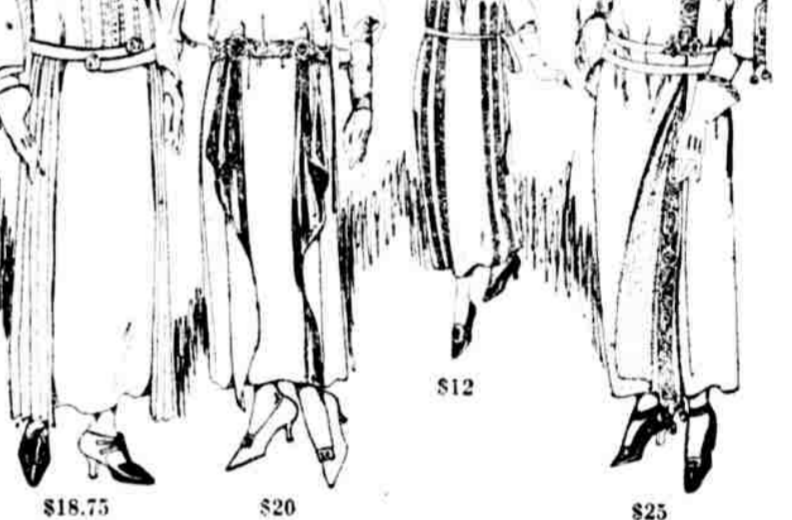

Think of getting an all-fur coat at less than a hundred dollars! Not merely a fur coat, but a GOOD coat of selected fur picked because the skins are of the better sort, thick and soft and durable. Both kinds are crepe lined and both are 33 inches long.
