

FARMERS' PROFITS HELD INADEQUATE

Secretary Wallace Cites Distorted Price Relationship as Retarding Prosperity

MAKES ANNUAL REPORT

Washington, Dec. 5.—American farmers, comprising about one-third of the country's population, had their... work and large production this year, still laboring under a serious disadvantage as compared with other groups

of workers because of the distortion of relationship of prices, Secretary Wallace, of the Department of Agriculture, told President Harding and Congress yesterday in his annual report.

"There is food in superabundance," Mr. Wallace said, "and this contributes to the prosperity of business and industry for a time, but the inadequate return which the farmer is receiving, and has for three years, inevitably must result in readjustments in the number of people on the farms in the cities, which will not be for the continuing good of the Nation."

There has been a greatly accelerated movement of farmers, and especially farmers' sons, from the farms to the cities and industrial centers, the Secretary reported, during the past year, August and September twice as many persons left the farms for the cities as normally.

"The Secretary renewed his recommendation for rural credits legislation, asserting that action should be taken promptly to increase the maximum which a Farm Loan Bank may loan to an individual from \$10,000 to \$25,000."

Congress Prodded Up Windy Fair Directors

Continued from Page One

of, but that magnificent project faded like a dream.

The Mayor Picks His Man. Meantime no earnest or intelligent effort had been made through newspaper and other publicity avenues to attract attention to Philadelphia's great vision.

Mayor Moore, on his own responsibility, assumed to name a Chief of Publicity. The committee of directors declined to sustain his choice, and a compromise was finally effected by creating the position of assistant to the President at \$1500 a year to save the face of the Mayor, who was president of the association.

Little evidences of life or animation have been given in all the ensuing months by the Mayor's appointees, either in the guise of publicity promoter or assistant to the president.

Meantime enterprising organizations and private citizens began boosting the Sequi-Centennial.

The Elks fathered a superb scheme of sending a delegation to the Pacific Coast to advertise the Centennial across the continent.

Patriotic and fraternal organizations passed resolutions heartily endorsing the idea.

Encouragement came from all directions, with profers of such help, was at command.

The Chamber of Commerce and various societies of business and professional men backed it to the limit.

So engrossed were the board of directors in their own inertia or their squabbles among themselves, that the plan of appealing to the President and to Congress for enforcement and aid became lost sight of.

Fiddling Annoys Washington. They were rudely recalled by the emphatic declaration of members of the Philadelphia Congressional delegation that unless prompt action was taken, assistance from Washington would be hopeless.

In any event, no financial aid need be reckoned upon until concrete evidence of Philadelphia's intentions in the matter was presented to the Congress.

Ententive promise of assistance was tardily obtained from Washington. In the first flush of enthusiasm over the project, distinguished architects were appointed to suggest a plan for the Centennial and outline its scope.

Elaborate and comprehensive designs, which embraced a portion of Fairmount Park as a site, the beautification of the park and the construction of buildings and palaces that would at once be a glory and honor to the city, were suggested.

Then followed a series of acrimonious wrangles over a "Council over a site." Individual members sought to impose their wishes upon the directors, but finally the Parkway and Fairmount Park site was selected.

Pull-Backs Get Busy. During all these months an element of opposition had been gradually gaining a foothold. Members of the board, whether from motives of petty jealousy, personal disappointment, or what not, started a back-fire directed toward the one star of the constellation.

The North Philadelphia Manufacturers' Association was drawn into the maelstrom of discontent, as an opposition voicing various pleas and excuses for inaction.

Samuel M. Vauclain and E. T. Stotsbury were leaders of the opposition.

Mr. Stotsbury arriving from a few weeks spent abroad announced that the nations of Europe were too poor to contribute to the Sequi-Centennial, and any American enterprise such as was contemplated.

The fact that these same nations had contributed a total of more than \$7,000,000 toward representation at the Brazilian International Exposition in Rio Janeiro, seemed to have escaped Mr. Stotsbury's vigilant attention.

Weeks prior to this, however, Mayor Moore had ordered the Council to a budget of \$119,000,000 for city improvements which he declared were necessary preparations for the Centennial Exposition.

The Mayor's Wet Blanket. To the casual reader and thinker, nothing is more striking than the blanket the whole proposition so much as this budget estimate of Mayor Moore's.

If his Honor had deliberately designed to be slow to the Sequi-Centennial he could not have contrived a more effective method.

Council appreciated Mayor Moore's proposition at its real worth.

With a steady eye on his \$119,000,000 budget, then ridiculed it, and finally laughed it out of the Chamber.

On the other hand, while the months were passed in delay and indecision, the Chamber of Commerce together with fifty-two other civic and political organizations continued to fight for the original idea for a Sequi-Centennial Exposition.

These organizations felt, as all forward-looking associations of their kind felt, that the good name of Philadelphia was at stake and must be upheld.

When the proposition first came to a head, the project, they transformed it into what amounted to a Pennsylvania exposition, and finally to degrade it to the level of a county fair, they resolutely set their faces against it.

They have been and are the bulwark of the Sequi-Centennial movement to whom, in the end, the credit must largely be given for whatever is accomplished.

Senator Pepper's Dream

The climax of bizarre suggestions was reached when United States Senator George Wharton Pepper tentatively suggested the regrading of Chestnut street, and the transformation of Broad street into a glorified Midway Plaisance as a suitable adjunct to any project for a celebration of the immortal Declaration of Independence.

As the distinguished gentleman has vigorously asserted his right to be heard, and his sincerity when he outlined this nightmare of civic glorification, this combination of cabaret, circus, all-fresco cafe and sarsaparilla and not to mention the "shades of the past," which he has lost the combination. The complete index shows the reader his way to information on hundreds of thousands of topics contained in the articles in the work, in addition to those main topics which are indicated by article headings. It is a searchlight which can be turned instantly upon any given spot in the whole realm of knowledge.

Information 100% Available. The Encyclopaedia Britannica not only contains more information than any other so-called work of reference, but every item of this information is made accessible for instant use by a unique feature of this encyclopaedia, the index pages, of which there are nearly 1000. These pages contain 500,000 references, every alphabetically arranged. By means of the index you have immediate access to half a million items of knowledge.

If each of the articles—more than 40,000 in number—in the new Britannica is compared to a cabinet filled with all the information on a certain subject, the index furnishes the pigeon-hole, each properly marked with its alphabetical label, in which this information is separated and sifted so that each pigeon-hole, or index entry, contains just that particular item of information that is needed at the moment.

No other encyclopaedia or general work of reference has this valuable index feature. Without this aid the owner of an encyclopaedia is much in the same position as the man with his valuable locked up in a safe of which he has lost the combination. The complete index shows the reader his way to information on hundreds of thousands of topics contained in the articles in the work, in addition to those main topics which are indicated by article headings. It is a searchlight which can be turned instantly upon any given spot in the whole realm of knowledge.

2000 Expert Contributors. The Encyclopaedia Britannica is the work of more than 2000 contributors who represent, some as scholars, some as industrial experts, some as explorers, financiers, chemists, surgeons, agriculturists, engineers, sailors, soldiers, administrators, and so on through a long list, every variety of profession and every kind of human interest.

They were selected solely with a view to their commanding knowledge of the subjects upon which they were invited to write. For example, a Dutch scientist wrote on light, a Columbia professor on ancient China, a German on the microscope, while the article on Mahomedan law came from the Hartford Theological Seminary, notwithstanding the fact that the British Empire has more Mahomedan subjects than any other country.

These contributors represent 23 countries, and include, among others, 368 Americans, 67 Germans, 48 Frenchmen, 14 Italians, 13 Dutchmen, 7 Russians, 3 Japanese, 11 Canadians, 3 Serbians, 3 Hungarians, 3 Rumanians, 8 Danes, 2 Czechoslovaks, 22 Austrians.

The Encyclopaedia Britannica in each of its editions has been written by recognized authorities, men and women who stand in the very forefront of the world's progress.

The Cheapest Book in the World. The Encyclopaedia Britannica is the cheapest book in the world. Its 32 volumes—without counting the 15,600 illustrations and maps—contain 49,000,000 words, which would make 476 volumes of ordinary text-book size. These 476 text-books would certainly cost as much as \$1100, yet the Britannica costs only a small fraction of this sum.

On the other hand, no collection of separate books could equal the Britannica in usefulness and completeness. The 476 ordinary volumes would occupy a great deal more space and be far less convenient for reference. The Britannica on India paper takes up ONLY THIRTY-FIVE INCHES OF SHELF ROOM.

Moreover, the Britannica is far more than a mere book of reference for occasional consultation; it is a complete library of information for every-day use and constant reading. It is a book for recreation as well as instruction.

It is clearly of great advantage and convenience to the reader that he should have this vast amount of material bound together in 32 compact volumes, carefully edited to insure that every subject of human enquiry is adequately covered without overlapping; and provided with a complete index which enables him at once to turn to any subject upon which he requires information. For, to find an authoritative answer to any question that occurs, he need only consult one work instead of hunting among 476, and that one work costs him less than one-tenth of the price of all the others put together.

An Up-to-the-Minute Work. With the single exception of the new ENCYCLOPAEDIA BRITANNICA, practically all general sources of knowledge are out of date. But the new Britannica—Twelfth Edition—brings the story of mankind down to the year 1922. Think what that means! Other books are badly out of date because more revolutionary changes have happened in the past few years than in any previous 100 years.

In these few years—hardly more than a decade—twenty-four monarchs were driven from their thrones; the maps of Europe and Africa were torn up and remade; 120,000,000 men were given the ballot; the United States spent 8 1/2 times as much on war as in the previous hundred years; more coal, more oil, and more steel were produced than in the entire 19th century—and the American people spent more on motors, "movies," cigarettes, and education than ever before, more on education for example than in the 100 years from 1800 to 1900.

In the past few years Einstein announced his epoch-making Theory of Relativity, and Michelson at Mt. Wilson observatory made the first measurement of the diameter of a star. Other men of science found new methods of charting the hidden recesses of the mind. Still others discovered that matter is not a mere "dance of the atoms," but actually a dance of the electrons—particles of electricity infinitely smaller than atoms. These discoveries open possibilities so great that the mind stands aghast. And in the same period inventors perfected the radio, made aeroplanes safe for daily travel and discovered and applied new ways of "curing" rubber, welding metals, and manufacturing steel.

The changes, inventions and discoveries of modern times have already remade the world. They have revolutionized our lives. To learn the full story of all these recent developments, so important to you and to everyone, you have only to turn to the new Encyclopaedia Britannica. This great work is unique in that it is absolutely abreast of the times.

Every subject you want to know about, no matter how recent, is treated by an expert contributor, a world authority in his particular field. Here for the first time is an adequate and authoritative account of the way here for the first time is presented a complete and accurate survey of all the stupendous changes, events and discoveries of recent times.

Fill out and mail the coupon and you will receive by return post the interesting literature giving full details about the remarkable new edition of the Britannica.

The Daily Novelette

Hope By Jessie Douglas

HOPE thrust one toe into the water, withdrew it, shivered, cast a frightened glance behind her and then slipped down suddenly under the next great wave.

The sea water glistened on her cheeks, her blue eyes sparkled, her little patient mouth smiled suddenly.

She forgot that she was just spending two weeks alone at Noise Beach, she forgot that she was aching in every part of her brain and her body from weariness. Now, for this afternoon, she was part of the sea and the sky and the sand. The waves that rolled in were no more playful than she, the whitecaps tossed no more frothy spray than her sudden laugh. And she came hurrying, she was frightened suddenly. Terribly frightened; as though the sea had turned cruel and those waves roaring in had some evil intent in their touch. The glistening dome of the sky shut her in like a great smothering bowl of blue.

She turned over very deliberately and floated. She seemed to float for a long, long time; she felt as though some must have passed her by when she opened her eyes slowly and saw that she had drifted back—to the white sand.

"How plucky little thing!" Hope turned.

What she saw sent a sudden wild flutter through her heart. He was a young man with a brown skin and a pair of eyes that laughed at her and admired her and mocked her all at once.

"I'll race you to the edge of the surf," he said, studying her.

Now she was conscious of how she looked in his eyes. She gazed down hurriedly at her old black suit with its long, discolored sleeves, at the cotton stockings that wrinkled about her ankles; she put up a timid hand to the knot of dingy black that kept her hair from wetting.

"Coming?" Hope hesitated. Then she swallowed all her prejudices, all her timidity and gave him a shy smile. It was she who took the first break ahead, it was he who won the race; but as they came gasping back to the beach once more he said slowly:

"How jolly you'd look without all those lumpy things to hinder you from swimming!"

"Good-by," she answered, and fled surreptitiously up the beach to the house.

FLAMES SWEEP YARMOUTH, NOVA SCOTIA. YARMOUTH, N. S., Dec. 5.—The business section of Yarmouth was threatened today by a fire that destroyed the Princess block and was still burning this afternoon. The thought to be under control.

ELECTION COST ALLEGHENY REPUBLICANS \$31,653. HARRISBURG, Dec. 5.—William G. Dick, secretary of the Allegheny County Republican Committee, today filed an expense account showing receipts of \$34,500 and expenditures of \$31,653.87, leaving a balance of \$2,846.13. Of the money received \$10,000 was sent to the Republican State Committee. Mr. Dick also filed a statement for the Association of Independent Voters showing \$6,200 received.

Senator Pepper's Dream. The climax of bizarre suggestions was reached when United States Senator George Wharton Pepper tentatively suggested the regrading of Chestnut street, and the transformation of Broad street into a glorified Midway Plaisance as a suitable adjunct to any project for a celebration of the immortal Declaration of Independence.

As the distinguished gentleman has vigorously asserted his right to be heard, and his sincerity when he outlined this nightmare of civic glorification, this combination of cabaret, circus, all-fresco cafe and sarsaparilla and not to mention the "shades of the past," which he has lost the combination. The complete index shows the reader his way to information on hundreds of thousands of topics contained in the articles in the work, in addition to those main topics which are indicated by article headings.
