BELLEFONTE, PA.

AGRICULTURAL.

NEWS, FACTS AND SUGGESTIONS. THE TEST OF THE NATIONAL WELFARE IS THE INTELL GENC. AND PROSPERITY OF THE FARMER.

Every farmer in his annual experience discovers something of value. Write it and send it to the "Agricultural Editor of the Democrat, Bellefonte, Penn'a," that other fagmers may have the benefit of it. Let communications be timely, and be sure that they are brief and well pointed.

WE regret to learn that an epidemic of some sort is prevailing among the swine of Chester county. The papers from which we obtain this news do not give any idea of its

AT a late meeting of the Fulton, Lancaster county, Farmer's Club, poultry or pets, is included. The one of the questions discussed was irrepressible Stoddard will be on "does lime pay?" Most of the mem- hand, and will publish a daily edition bers agreed that lime had been useful, but that the land was now so the World, devoted exclusively to the full of it that they were warranted in great show and its interests. As illus-

THE attempt to organize a National Agricultural Society to which we referred in our issue of the 30th ult., has crystalized, and a duly authorized committee has issued an address to the public, stating the aims of the society, and calling a convention of all interested in the subject at the Metropolitan Hotel in New York on the 10th of December. The address is largely signed by representative agriculturists and public men lars to the farmers; but their influthroughout the country.

WE particularly request the attention of all our readers interested in farming, and particularly young farmers to an article in another column on this page, under the head of "A Farmers' Lecture Course." The article is entirely self-explanatory, and we only refer to it here to give the scheme our hearty approval, and urge all who possibly can to avail themselves of this opportunity for improvement in their calling. We know of no other way in which the same amount of information can be so pleasantly and cheaply secured; and the authorities of the College are entitled to hearty commendation for this effort to disseminate correct agricultural information.

Roast turkey, with cranberry sause, flanked by well-grown and handsomely-blanched celery, is pretty good living, and we hope that every farmer's family to whom the Demo-CRAT makes its weekly visits will have just such a dinner to-day. No one better deserves it, and no one can more easily have it than the farmer. Not a farmer in Centre county but can have just such a dinner, and all of it home-grown except the cranberries, ("and the sugar of which they require a good deal," says our "better half," who is peeping over our shoulder), provided he or his family will take a little pains and forethought to secure it. The farmers of America are not only feeding all America but nearly all Europe as ing put in proper condition. Now is well, and who should be better fed the time to gather them up, clean than themselves?

> AT the late meeting of the Virginia State Grange, the Master, in his annual address, insisted that the Department of Agriculture should be "dignified to a position in the Cabinet;" said of agricultural papers that "they have saved thousands of dolence for good is far greater in the educational feature than in the pecuniary one," and suggested that "if farmers would devote more of their means to the education of their sons and daughters than to adding acres to their farms, they would have no reason to complain that all the executive and legislative positions of the country are filled by professional men." This is all very true, and very well put by Master Baylor; but with his sweeping denial that anything has ever been done for agriculture; that "for this there has been no thought, no sympathy, no exertion; it has been suffered to languish from neglect by those whose duty it was to foster and encourage it," we cannot wholly agree. Master Baylor must be wilfully closing his eyes.

For the necessarily limited space

which we devote to agricultural sub-

jects, we cannot pretend to give even hints as to the work which needs attention from week to week, nor do we think it advisable so to do. Just now, however, we want to call attention to two very important matters which our observation teaches are too often neglected, viz: the timely and proper care of farming implements, and the opening of surface drains on the wheat and clover fields. Even on the best regulated farms, tools are sometimes during the lasy months, either left lying out where last used, or hastily and carelessly thrown under the sheds without beand oil them, and carefully put them out of harm's way for the winter. If From the American Poultry Yard. WE learn from the American Dai- they need repairs from ordinary wear

The first and largest one is ed with it. This supplies a sort of a "special" of one hundred dollars cheap varnish that may be rubbed on cash, offered by Stoddard, editor of with a cloth very thinly. The rosin our valued contemporary, the Poul- will shut out air and moisture, and

Milk-Producing Feed.

A correspondent of the Stock Jour nal states that he is short of hay for his dairy, and can buy bran at \$11 per ton, and corn meal at \$18 per ton, and asks from which he will get the best result in milk, proportioned nal is full of instruction, in plain, well-chosen words, and we quote it entire for the benefit of the many of our Centre county farmers who find themselves in much the same situation as the Journal's correspondent :

Bran is peculiarly a milk producing food. Its large percentage of albumin-oids supplies the casein in the milk and replaces the muscular waste of the cow's system. It has been determined, by numerous experiments, that the milch low requires, for a large yield of milk, a nitrogenous food, such as pea-meal, loats, oat-meal, bran, good clover hay, ste. Corn meal may be fed with good lover hay, or with any of these nitro enous foods, but it contains too large The following table give a analysis of the digestible lements in bran, corn meal, and clover

The proportion of digestible elements fixes the value of a food. The German claim, in their experiments, to have de termined the precise proportion digest ible in most of the feeding stuffs. The values given are those of the German tandard, but in this country can only e said to be the proportional value oarse wheat bran is determined to be worth \$1.04 to corn meal \$1.11 per hundred pounds; and as wheat bran has a nutritive ratio of 1 to 3.9 and corn meal to 8.6, showing how much more nitro enous the bran is, and, consequently, ow much better adapted to feeding ilch cows with common hay or straw. But we should advise our correspondent to feed 1 lb. of corn meal to 3 lbs. of bran, which will give a mixture containing one of nitrogenous to 4.3 carbo hydrates—a well balanced food to add to hay or even straw. Bran is very rich in the mineral elements of food—rich in the mineral elements of lood—rich
in phosphate of lime and potash,
to build and supply the waste of the
cones. It is not all digestible, but this
part goes to enrich the manure. It is
cound, where cows are fed bran on pasture, that the pastures grow better year by year. The mineral constituents amount to nearly five times as much in amount to hearly hee times as much in bran as in corn-meal. It is evident then that, at the prices mentioned by "Ohio Farmer," bran is the cheapest food; but as corn-meal is richer in starch and fat, it is well to mix a small proporand this especially in winter, when car-bon is required to keep up animal heat. Bran at \$11 per ton, is cheaper than hay; and it is better to make up the deficiency in bran and corn meal, in the proportion given, than to buy hay : be sides, you cannot get a good yield of milk in winter on hay alone.

Feeding Troughs for Poultry

Feeding troughs for poultry, properly constructed, ought to be generally substituted for the wasteful practice of feeding from the ground. "reasons why" are obvious. Where there is a scramble for the food that their purpose to the President without is thrown helter-skelter the weak are prevented by the strong from getting their share until the latter are satisfied and the food is trampled in the dirt. It is no advantage to fowls to eat sand, dirt or gravel mixed with their food. The gravel and other indigestible substances necessary to the proper trituration of their food in the gizzard can be given separately, and should be. A simple trough may be made, defended by slats placed vertically or on a convenient angle, with spaces sufficient for the passage of the head, thus preventing the trampling and soiling of the food, which will not be wasted, as in the case where it is thrown carelessly on the ground.

This will answer for those who have but few fowls, and keep them in confined quarters, with food conwe are in receipt, from Mr. Bals, the The labor and expense of plowing have than to scatter it widely over a Democrat.

share as well as the strong, and all will do better than if the feed is dumped out to them in troughs and large quantities at a time. Remem-

In order to meet the wants of ability to successfully prosecute their calling, the Pennsylvania State College offers the following facilities:

On Monday, the 26th day of January, 1880, the Faculty will begin a special course of instruction extending through four weeks, consisting of two lectures on each of five days the week; and further exercises equivalent to a third lecture will be given daily. The course will embrace agricultural chemistry, botany, entomology, physiology, social ence, plowing, sub-soiling, fertilizers, grain crops, rotation of crops, stock breeding, fruit growing, dairying, soiling cattle, forest culture, rural law, rural architecture, farm mechanics, flower gardening, forage crops, drawing, roads, bridges, common schools, landscape gardening, vegetable gardening, book keeping,

meetings for discussion and the interchange of opinions and experiences will be held, to which will be invited persons who have become successful and noted in special departments of agriculture. On the other evenings the persons attending the course will be welcomed to the lectures, rhectorical exercises, society

on the payment of five dollars for the whole time embraced by the course. This sum will pay for rent, fuel and use of such furniture as the institution provides for students rooming in the building, viz: single bedstead, mattress, table, washstand and chairs. The occupants of each room will provide for themselves all other articles, including lights, bed clothes and towels. It will be seen, therefore, that persons not rooming in the building will have no payment whatever to make to the College.

Table board can be had in the neighborhood at \$3 per week; and, before the time named for the opening of the course, the officers of the College will endeavor to make arrangements by which farmers, and others in the vicinity, will receive boarders at lower rates.

The above course will be given, provided that by the 31st of December, 1879, applicants sufficient in number to justify the prosecution of the plan shall have notified the President of the College of their intentention to attend. All such persons, therefore, are urged to communicate delay; and he will at once send them such additional information as may then seem needful. Address,

Pres't. JAMES CALDER, State College, Centre county, Pa.

However plausible an agricultural theory, the careful farmer will not largely embody it in his practice until it has been satisfactorily tested by practical experiments under various conditions.

ADVICE to sheep owners-"Enact a dog law of your own. The dogs will prefer a fresh piece of meat with a little strychnia folded inside, to un-killed mutton."

HARDIN says: "Buy a big udder and it matters little what kind of a cow is attached to it, for all the other

THE present is probably as good a time as any in the year to cut out the canes of raspberries and blackberries that have borne fruit.

THERE is nothing on the farm that sooner feels neglect than the dairy

A good family paper, the CENTRE

Among Our Contemporaries.

Our old friend, the American Agriculturist, (we have read it regularly for near twenty-five years, and expect to read it regularly as long as we shall read anything, and are therefore entitled to call it "old friend"), has sent us its prospectus and premium list for 1880. As usual, its prospectus promises lots of good things for the new year, and as in our long acquaintance with it we have never known the Agriculturist to break a promise, we have reason to believe that the volume for 1880 will be a better one than any that has preceded it; and this is as high praise as we can give. Its premium list is simply wonderful, embracing no less than 847 good books, farmers who desire to increase their and 354 different articles, including almost every imaginable thing, from an 80-acre farm or self-rake reaper, down to a pocket comb or toy wheelbarrow. To aid in circulating the Agriculturist is always to do good, and by its arrangement for premiums it gives good pay for doing it. Whether

pay you to get the handsome premium list -published as a supplement to the October number, and in uniform style with it-as a picture book for the children, and it will be sent free of charge and postage paid, if you will send a request for it, with your name and address on a postal card, to the Orange Judd Co., 245 Broadway, New

THE PRACTICAL FARMER is just what its name indicates-practical. It is practical in its editorials, practical in its correspondence, practical in its advertisements, and, more than all, practical in its price. Sixteen large pages a week, and these all well-filled with just what every farmer needs to read for that particular week, is cheap at four cents per week, and at \$2.00 per year-the price of the Farmer-this is more than it costs. Its editorials are able, its correspondence plainly practical and timely, and, all in all, it is one of the best papers published for Pennsylvania farmers. Published at 518 Walnut St., Philadelphia, you want to subscribe for it or not, it will by the Farmer Company.
