BROWN CHEMICAL CO., Baltimore, Md. PATENTS. HALBERT E. PAINE, Late Commissioner of Patents. ST. XAVIER'S ACADEMY, NEAR LATROBE, PA.

The Centre Democrat. BELLEFONTE, PA. WE surrender a large portion of the agricultural space in to day's issue to the second of Mr. Diffenderfer's series of articles upon the culture of tobacco, as published in the New Era.

TOBACCO CULTURE. How to Grow the Coming Crop. WHEN TO PLOW THE GROUND—SOD AND CORN LANDS—THE BEST SOIL—PREPARING THE FIELDS—HOW CLOSE TO PLANT—RICH LAND NECESSARY.

NICHOLS, SHEPARD & CO. Battle Creek, Michigan. MANUFACTURERS OF THE ONLY GENUINE VIBRATOR. THRESHERS, Traction and Plain Engines and Horse-Powers.

THE REST LOCALITIES. Tobacco ground should be chosen as well for its locality as for its richness and productiveness. It should have a southern exposure, if possible. It ought to be slightly rolling, rather than flat, on account of the better drainage, which is of no little importance.

This also makes slaty, sandstone and free-stone formations appropriate for tobacco growing. The color of the soil has also much to do in influencing the crop. Just as the dark-colored soils of this county are largely to be credited with the rich, chestnut-colored leaf of which we boast, a light-colored ground will be likely to impart to a certain extent its color to the tobacco crop grown on it.

PROVED THE WISDOM OF THE PLAN AND amply repaid the outlay. Besides, it must be borne in mind, the manure is not intended for the food of the tobacco crop alone. Wheat commonly follows tobacco, and it is a well known fact that the crop of this grain grown on tobacco land is commonly the best raised on the farm.

THE PROPER CONDITION OF THE GROUND. The old adage, "A good preparation is half cultivation," is no where more applicable than in the thorough preparation of the tobacco field. Let no labor be spared to put the soil in perfect condition. The more complete and thorough the tilling, the more likely is final success to attend the grower's efforts.

THE DISTANCE BETWEEN THE ROWS AND PLANTS. Considerable difference of opinion exists as to the proper distance at which the rows should be apart, and also as to how closely the plants should be set in the row. The former varies from three to four feet and the latter from twenty-two to thirty inches. These matters should be controlled by the quality of the soil and the kind of tobacco planted.
