BELLEFONTE, PA. AGRICULTURAL. NEWS, FACTS AND SUGGESTIONS.

Every farmer in his annual experience discovers something of value. Write it and send it to the "Agricultural Editor of the Democrat, Bellefonte, Penn'a."

If a fence board is loose one nail driven in to-day will fasten it; if you wait till to-morrow it may require three.

ANY one who wishes to keep a small quantity of apples nicely for family use will find it a good plan to pack them carefully in bran.

SOME people do not appear to know that buckwheat cakes are best when made partly of wheat flour—say one-third.—Farm Journal.

THE American Dairyman, which has in some manner missed its way to our table for some weeks, has again put in an appearance and is very welcome.

If you have no strawberry bed we extend you our sympathies, and suggest that you immediately set about preparing a bed for next spring's planting.

NICHOLS, SHEPARD & CO. Battle Creek, Michigan. MANUFACTURERS OF THE ONLY GENUINE VIBRATOR THRESHERS, Traction and Plain Engines and Horse-Powers.

GOVERNOR CULOM, of Illinois, has issued his proclamation bearing date November 1, prohibiting the importation into that State of horned cattle from certain counties in the States of Connecticut, New York, Pennsylvania, New Jersey, Delaware and Maryland.

White Grules. We have never known a season in which the larvae of the "May beetle" or "June bug," commonly known as white grules, have proved so destructive as the past one.

With a short crop and high prices it becomes those who have corn that they intend converting into pork between this time and spring, to feed it out liberally before the severe weather of mid-winter sets in.

THE man who plans a barn with modern improvements should be careful that his wife has modern improvements in her kitchen.

Two Visions.

Agnes M. Machar, in November Century. Where close the curving mountains drew To clasp the stream in their embrace, With every outline, curve, and hue Reflected in its placid face,

The plowman stopped his team to watch The train, as swift it thundered by; Some distant glimpse of life to catch, He strains his eager, wistful eye.

And he, as all day long he guides His steady plow, with patient hand, Thinks of the flying train that glides Into some new enchanted land,

Where, day by day, no plodding round Wears the frame and dulls the mind— Where life thrills keen to sight and sound, With plows and furrows left behind.

Our Grain Crop and its Commercial Importance. The current issue of the Scientific American contains a very interesting leading article under this caption and devotes nearly its entire first page to a series of illustrations referring to it.

The enormous and wonderfully rapid increase in our grain crops is attributable to several causes. Primarily we have the invention and improvement of agricultural machinery, by which the cultivation of the great West has been made possible.

Next we have the vast extension and improvement of our railway and water lines, making possible the profitable transportation of the large surplus to Eastern and foreign markets. With this extension of means has come an important lowering of freight charges, which has made it possible to place American grain in the markets of Europe at prices at which it can compete successfully with European grain.

Of course the vast immigration of farmers who have swarmed into the Northwest, a full regiment a day for every day in the year, is an element of the problem of no mean significance; but their labor has been largely invited and made profitable by the cheapening of the transportation of their crops to the East and to Europe.

Ten years ago it was the belief of railroad men that grain could not be carried from Chicago to New York for less than 24 cents a bushel. The rate has since been lowered to 20 cents, and for special rates, it is said, on good authority, to half that sum.

Ten years ago it cost nearly as much to get a bushel of grain from Buffalo to New York as it now does to carry it from Chicago to Liverpool. The influence of a reduction of a cent a bushel in transportation charges would be incredible if we did not know how narrow is the margin of profit in the handling of great staples.

Something over half of the entire export grain trade of the country is done at this port, where the elevators and great warehouses have a storing capacity of nearly twenty-five million bushels. A very large part of the grain passing through the city, however, is loaded directly from the canal boats into the ocean steamers, as shown in our illustration.

steamer will carry 150,000 bushels; from 80,000 to 90,000 bushels is a large cargo.

Packing Fruit. Select perfectly sound specimens of apples and pears, says Dr. Calder, and pack them in boxes or barrels in common land plaster or gypsum, using first a layer of fruit and then a layer of plaster, using as much fruit as possible without having the specimens actually touch each other.

THE cow is a most prompt paymaster for all she exacts as food. Let us see the inducements she offers her owner to feed her well, in drouth or plenty. Her milk becomes rich in October, and much less milk will make a pound of butter or cheese than in June or July.

It is known that coal ashes improve the texture of the soil. It is held also by some (the writer included) that if used freely they increase the productive capacity aside from the mechanical effect, and this in some seasons to a considerable extent; but why, with the little fertilizing material they possess, has not been made clear.

PLANTS feed on nothing but soluble food. The more soluble the food the more readily assimilated and the greater and more rapid the benefits derived from the application. Of so vital importance is this truth that when the difficulties of application or the cost of transportation are not excessive, manure may be advantageously converted into liquid by the addition of water before being placed at the disposal of the plant.

A cow is not a God to create, but only a chemist to sort out and store up; therefore, when we demand milk from a cow, we should feed her the proper ingredients out of which milk is made. The best of milk cows, if ignorantly and scantily fed, return small, if any, profit; a poor cow, so fed, entails a positive loss.

As an article of food apples rank with the potato. If families would only substitute ripe, luscious apples for pies and sweetmeats a lot of sickness would be prevented. A ripe, raw apple is digested in an hour and a half; a boiled potato takes twice that time.

MORE butter is spoiled "at the pail," than during any other process through which the milk and butter passes. The udder is not properly cleaned, or the hands of the milker are foul, and in many ways the milk receives that which ever after remains to contaminate.

MORE apples are lost every Winter from being kept too warm than from any other cause.
