AGRICULTURAL.

NEWS, FACTS AND SUGGESTIONS.

THE TEST OF THE NATIONAL WELFARE IS THE INTELLIGENCE AND PROSPERITY OF THE FARMER.

Every farmer in his annual experience discovers something of value. Write it and send it to the "Agricultural Editor of the Democrat, Bellefonte, Penn'a."

Analyses of Fertilizers.

The manufacture and sale of commercial fertilizers afford so good an opportunity for adulteration and fraud, that it has been thought wise in many of the States, our own among the number, to re-protect those who buy and use them.

To all whose employments cause irregularity of food and irregular hours of sleep, the greatest blood purifier, Liver Regulator, and Life and Health Restoring Agent on earth.

To all whose employments cause irregularity of food and irregular hours of sleep, the greatest blood purifier, Liver Regulator, and Life and Health Restoring Agent on earth.

found in hardly any of the fertilizers analyzed; in most cases it occurs as nitrogen in organic matters; now, this organic nitrogen in bones, blood, meat, etc., is readily converted into ammonia and is hence an extremely valuable component of fertilizers.

Careful examination of a fertilizer will generally suffice to indicate in which of these forms the nitrogen is present and thus serve as a guide in comparing values.

A word as to the valuation of the fertilizers given in the reports. These represent not always the actual value, to the farmer in any given locality, but the sum of the commercial values of the several ingredients shown by the analysis to be present in the sample.

The Philadelphia (Pa.) North American, in a recent editorial says: "The granges of this State are displaying an amount of vitality which indicates that they have lately been working more steadily, if with less flourish of trumpets, than during the heyday of their early incorporation."

There are many features in the organization of the Patrons of Husbandry which are highly commendable, not the least of which is the broad and liberal plank which recognizes in woman the true helpmeet and consequent equal of man.

THERE is less excuse for feeding a good milk cow stingily than any other farm animal. She does not ask any credit; she makes prompt daily payment; and her product is a cash article.

If he has not the food at hand, prudence and good judgment, as well as humanity, requires him to furnish her full rations at all times, without regard to a favorable or unfavorable season. We always counsel dairymen to make an earnest effort to produce all the food for their herds upon their own farms.

The first principle of profitable dairying requires that they feed abundant food to keep up an even flow of milk, whether they produce or purchase the food.—National Live-Stock Journal, Chicago.

THERE is a great deal more variation in the quality of stable manure than is commonly supposed. The success of farmers who fatten stock during the winter is mainly due to the facts that they feed rich concentrated food, and that fattening animals utilize mainly the carbonaceous portions of the food which are of little value for the manure pile.

In this way the phosphates and nitrogen in the food go to the fields in probably more available forms than they can be got in commercial manures.

STABLES should be warm enough so that horses may be comfortable without blankets; then the blankets will do good service as coverings when the animal is left standing out in the street.

The practice of covering a horse with a blanket in the stable, to be removed as soon as he is taken out, is like a man wearing his overcoat in-doors and taking it off when he goes out in the open air.

In fattening the old cow, get all the milk out of her at the same time that you can. The milk will be rich and ought to pay for the feed, without much interfering with the fattening process.

It will take a little longer to get her ready for the knife, but not a great deal.—Farm Journal.

I know of scores of fine poultry houses which have been equipped by "taste," with gables, and partitions, and feeding troughs and hospitals, and the best birds, and bet some smart old lady near by with her old four-barrels on "the flats," and her condemned bushel baskets hung to a beam, will have eclipsed the man of taste utterly in her tale of profits.

I CAN make more pork with clean shelled corn soaked 12 hours in pure spring water, than I can with new, soft corn. I will keep my pigs in better condition, and my feeding floors and pastures will not be covered with cobs.

The waste in feeding new corn is greater than the cost of shelling the old.—Cor. Ohio Farmer.

TO CLEAN MILK STRAINERS.—Fine wire milk-pail strainers that become stopped up may be readily cleaned by rubbing with a damp cloth dipped into baking soda.—Rural New Yorker.

No farmer should be satisfied unless he can yearly increase the productive capacity of his land. The more of his profits he can find in this permanent form of investment the greater will be his gains for years to come.

The entire corn crop of Mr. F. A. Barlow, Norton county, Kan., raised at a cost of \$55, was shipped as a present to Father Clarkson, of Iowa. It consisted of "a small and shriveled nubbin weighing three and a half ounces."

THERE are few cows so constituted that their milk cannot be largely improved, both in quantity and quality, by a careful attention to the wants of the animal. Good feed and a warm barn will go far toward accomplishing this desirable result.

According to The Jones Homestead, the threshing in the central part of that State "shows wheat to be from four to nine bushels per acre."
