The Centre Democrat.

BELLEFONTE, PA. AGRICULTURAL. NEWS, FACTS AND SUGGESTIONS.

Every farmer in his annual experience discovers something of value. Write it and send it to the 'Agricultural Editor of the Democrat, Bellefonte, Penna.'

CLOVER which lies exposed to rain after being cut, may lose by washing more than one-half its ash ingredients.

In the matter of ensilage, it will be a perfectly safe course to adopt the most excellent rule of practice laid down by the eminent David Crocket, Esq., and when we have, by careful observations of the experiments of others, arrived at the point at which we are 'sure we are right,' we may accept his advice and 'go ahead.'

Now is the time to do effective work in the orchard. Trim, wash, and hunt for borers. Go to work, it is one of those jobs that cannot be postponed without serious loss.

FREQUENT stirring of the soil in the cultivation of all so-called hood crops, is one of the bulwarks of good farming, and particularly in a dry time. We have faith in it, and, as much as in us lies, we practice it.

Whether the object of your attention be the garden, the potato lot, or the cornfield, do not let the weeds get a start. They are never so easily killed as before they come up.

Ewes that have failed to breed, or have lost their lambs, should be pushed forward toward fattening with all possible dispatch, that they may be ready for marketing with the early lambs.

Where a district is made up of all sorts of soils there will be a lack of unity in praying for rain.—Acot's Oem.

So far as our observation goes there is no 'lack of unity' upon this subject at this present writing—June 6. Weeks of clouds and cold rains in May and early June constitute a 'spell of weather' having a tendency to produce perfect accord among farmers as touching this one thing.

Somebody advises to mix a small proportion of kerosene with castor oil for lubricating purposes. We have tried it, and find the mixture a decided improvement upon the oil alone.

We believe this practice originated with and was first given to the public by us. At all events we have used the mixture for a number of years on all our farm machinery, and know of nothing so good.

The season is at hand in which the township supervisor of roads—"path-master," in some States—will start on his annual tour of alleged road-mending.

Nothing seemed to make strawberries swell rapidly, and produce a large crop of fine fruit, like two or three thorough soakings of water just when the fruit was about half-grown.

Good hay means that the grass must be cut at the proper time and must be cured—not dried to a crisp in the hot sun.

EXAMINE fruit trees around the stems to see if the borers are at work.

Raising Tomatoes.

HINTS ABOUT THEIR CULTIVATION FROM AN ACKNOWLEDGED AUTHORITY. From the Germantown Telegraph.

Many persons find much profit in pinching back the branches of the tomato, and it is a good practice when it is judiciously done. It may be done, however, and injury result. In the first place it is no use to attempt it after the flowers have fallen.

The idea is to force the nourishment into the fruit at the earliest start; for it is at that time the future fate of the fruit is cast. A few leaves beyond the fruit is an advantage. It is only the growth that is to be checked. And then much damage is done by taking off the leaves as well as the fruit.

Our contemporary omits to say that the plants should be tied to stakes or trellises, but what it does say necessarily implies this, as the plant cannot be successfully pruned as suggested when allowed to straggle all over the ground.

Whether the object of your attention be the garden, the potato lot, or the cornfield, do not let the weeds get a start. They are never so easily killed as before they come up.

Is Millet an Exhaustive Crop?

B. C. S. inquires as to whether millet is an exhaustive crop. Any crop that will cut, on rich land, five and six tons of cured fodder, will draw upon the fertility of land no matter what the variety or kind, but that it is proportionately more so than other crops I do not believe.

As a test upon this point, I raised five crops of millet in succession upon a field that had been badly run by a former owner, but it gave about two tons of cured fodder per acre, without much falling off; though purposely I used no fertilizer. I should have no hesitation in seeding land to grass after a crop of millet. I should plow it, thoroughly drag and top-dress with manure, sow the millet about the 25th of May, or even ten days later, and cut it as soon as the heads showed nicely. This can be done in 80 days, or even less, if the season is favorable.

The plan that I would recommend would be to follow the millet with wheat, using some standard brand of phosphate and bone meal mixed. A spring-tooth drag will admirably fit the land for the drill, and no reason exists why land necessarily fertile, and then managed as described, should not, with this trifling additional labor, produce two paying crops, the wheat and clover, after the millet.

Curing Clover Hay. Correspondence Rural Sun. My plan is to start the mower at two or three o'clock in the afternoon, after all water has evaporated, and the heat of the day is past.

Under the above caption the April number of the American Agriculturist publishes an excellent article advising broadcast manuring, from which we quote a paragraph: "The growth and vigor of all plants or crops depend chiefly upon a good supply of strong roots that stretch far out, and thus gather food over the widest extent of soil."

In commencing farming, I followed the prevailing practice and planted pumpkin seeds—getting a fair crop of corn, plenty of vines, and sometimes a good crop of pumpkins. While pursuing this practice, it required a longer time for my corn to ripen than it has since discarding the pumpkin vines.

That Old Hoe. In with that old hoe a man can do but four-fifths as much work in a day as he can with a new one, labor costing \$1.50 per day and a new hoe 65 cents, at the end of two and a half days' work I am a loser by using the old hoe, even if it did not cost me anything.

The Christian Union reports an instance of 962 of "those big, brown, buzzing beetles which produce the grub so mischievous in garden and grass-land, captured one evening last June by means of a lighted lantern suspended over a pail of water in a raspberry bush.

MAN may construct steamships and railroads, disembowel the earth for ores, measure the mountains of the moon, and make his voice heard across old ocean, but God alone can make a strawberry.

WOMAN CAN SYMPATHIZE WITH THE HOPE OF WOMAN. THE RACE.

LYDIA E. PINKHAM'S VEGETABLE COMPOUND.

A Sure Cure for all FEMALE WEAKNESSES, including Leucorrhoea, Irregular and Painful Menstruation, Inflammation and Ulceration of the Womb, Flooding, PRO-LAPUS UTERI, &c.

For all the ailments of the generative organs of either sex, it is second to no remedy that has ever been before the public; and for all diseases of the KIDNEYS it is the Greatest Remedy in the World.

LYDIA E. PINKHAM'S BLOOD PURIFIER will radiate every venous humor from the system, and is a great help in all cases of the system. As marvelous in results as the Compound.

For both the Compound and Blood Purifier are prepared at 232 and 233 Western Avenue, Lynn, Mass. Price of either, \$1.00 bottles for \$1.00. The Compound is sold by mail in the form of pills or of lozenges, on receipt of price, \$1 per box for either. Mrs. Pinkham freely answers all letters of inquiry. Enclose 3 cent stamp. Send for pamphlet. Mention this Paper.

LYDIA E. PINKHAM'S LIVER PILLS cure Constipation, Biliousness and Torpidity of the Liver. 25 cents. Sold by all Druggists. "G" (3)
