NEWS, FACTS AND SUGGESTIONS.

THE TEST OF THE NATIONAL WELFARE IS THE INTELLI GENCE AND PROSPÉRITY OF THE FARMER.

Every farmer in his annual experience discovers something of value. Write it and send it to the "Agricultural Editor of the DEMOGRAT, Bellefonte, Pennia," that other farmers may have the benefit of it. Let communications be timely, and be sure that they are brief and well pointed.

THE acreage of sorghum in Kansas is double what it was last year.

RURBING the horse morning and noon with a handful of smartweed will prevent the flies from troubling him during the day.

THREE Cotswold ewes belonging to Sam Byars, living on the Dutch Ridge pike, gave birth to ten lambs. and one to four. Who can beat this in the sheep business?-Augusta (Ky.) Bulletin.

Mesers. Editors:—
The above is a good likeness of Mrs. Lydia E. Pinkham, of Lynn, Mass., who above all other human beings may be truthfully called the 'Dear Friend of Woman,' as softle of her correspondents love to call her. She is sealously devoted to her work, which is the outcome of a life-study, and is obliged to keep six lady assistants, to heip her answer the large correspondence which daily pours in upon her, each bearing its special burden of suffering, or joy at release from it. Her Vegetable Compound is a medicine for good and not evil purposes. I have personally investigated it and am satisfied of the truth of this.
On account of its proven merits, it is recommended In Spain it is the custom of every one who eats a fruit to dig a little hole and plant the seed, and the roads in that country are lined with trees. the fruits of which are free to all. Some one says: "The man has not lived in vain who plants a good tree in the right place."

A RICH lumberman in northern Michigan has salted a small lake and planted it with ovsters. Salt costs very little at Saginaw, and as the It permeates every portion of the system, and gives new life and vigor. It removes faintness, fathlency, destroys all craving for stimulants, and relieves weakness of the stomach. It cures Bloating, Headaches, Nervous Frostration, General Debility, Sleeplessness, Depression and Indigestion. That feeling of bearing down, causing pain, weight and backache, is always permanently cured by its use. It will at all times, and under all circumstances, act in harmony with the law that governs the female system.

It costs only \$1, per bottle or six for \$5., and is sold by druggists. Any advice required as to special cases, and lake has no outlet it is easy to keep the water salt. He expects to raise as fine oysters as can be found on any of the bays of the coast.

THOSE who place high value on improved stock should keep in view It costs only \$1. per bottle or six for \$5., and is sold by druggists. Any advice required as to special cases, and the names of many who have been restored to perfect health by the use of the Vegetable Compound, can be obtained by addressing Mrs. P, with stamp for reply, at her home in Lynn, Mass.

For Kindrey Complaint of either sex.this compound is unsurpassed as abundant testimonials show.

"Mrs. Pinkhams Liver Pills," says one writer, "are the best in the world for the cure of Constipation, Biliousness and Torpidity of the liver. Her Blood Purifier works wonders in its special line and bids fair to equal the Compound in its popularity.

All must respect her as an Angel of Mercy whose sole ambition is to dogood to others.

Philadelphia, Pa. (2) Mrs. A. M. D. the fact that the use of inferior stock of any breed will not give satisfaction. In order to improve the animal must be vigorous, of good form, and up to the standard of purity. Breeders wrong their customers and injure their reputation in allowing any but good stock to go from their stock

SINCE it is claimed that an acre of fish-pond will produce more food than five acres of ground, why should not farmers raise their own fish as systematically as they do hogs or cattle? And why should they not turn their attention to fish culture as a regular industry and so ree of profvantage of good markets? There I rick the tomatoes—the smoothest soil to nitrates. are few farms that, with a little labor d best shaped—and scald them 8. Clover not supply a fish pond.

Overworked Farmers. At this season of the year when

the cultivation and harvesting of farm crops claim the constant attention of farmers, and when excessive heat makes hard work so depressing, there is danger from overwork with the ambitions farmer, who has his entire mind on the safety of his until nearly full; then place them in ers of our country work too hard for cook till I think they are heated the good of their health, and very through; then I seal them. I use often it is entirely unnecessary. Farmers who have a number of workmen under their supervision can usually accomplish as much by their minds as by their hands, and with less fatigue. There is much in the management of farm laborers, and to direct one's hands so as to accomplish the greatest amount of work in the least time is one of the secrets of successful farming. The farmer who toils incessantly through the day in the hot sun, or perhaps in the rain, besides doing chores morning and night, finds little pleasure in life. And he realizes less, too, from his labor than he expects. A more suc. glass. cessful farmer will hire his hard work done, and keep himself fresh and vigorous, and his hands encouraged by performing less work himself and directing and showing others. In every large business where laborers are hired, a person is needed whose chief business it is to plan, lay out and direct work, and it holds true as much on a farm as in a machine shop, carriage manufactory or store. A great fault with farmers is, that they have too little system about their business. More thought and less hard labor will do wonders on some farms, and the owners would reap the reward in greater freodom and more

Tar the Noses of Sheep

The months of July and August are the ones when sheep in many localities are subject to a most aggravating annoyance from fly (oestrus bovis) which seems bound to deposit its larvæ in the nostrils. It infects wooded districts and shady places where the sheep resort for shelter, and by its ceaseless attempts to enter the nose makes the poor creature almost frantic. If but one fly is in a flock they all become agitated and alarmed. They will assemble in groups, holding their heads close together and their noses to the ground. As they hear the buzzing of the little pest going from one to another, they will crowd their muzzles into the loose dirt, made by their stamping, to protect themselves, and as the pest succeeds in entering the nose of a victim, it will start on a run, fole Two of them gave birth to three each lowed by the whole flock, to find a retreat from its enemy, throwing its head from side to side, as if in the greatest agony, while the oestrus, having gained his lodging. place, assiduously deposits his larvæ in the inner margin of the nose. Here, aided by warmth and moisture, the eggs quickly hatch into a small maggot, which carrying out its instincts, begins to crawl up into the nose through a crooked opening in the bone. The annoyance is fearful, and maddening, as it works its way up into the head and cavities.

The best known remedy is tar, in which is mixed a small amount of crude carbolic acid. If the scent of the acid does not keep the fly away he gets entangled in the tar, which is kept soft by the heat of the animal Any kind of tar or turpentive is useful for this purpose, and greatly promotes the comfort of the sheep and prevents the ravages of the bot in the head.

Canning Tomatoes.

cessful in canning fruits generally, are apt to fail with the tomato. A lady says: "We have ten acres of fruit of all kinds and I take a great and more numerous, and more leaves es, some canned last fall, and some a after hay. year ago, not mentioning my other fruit. I will tell you how I canned it, especially those who have the ad- my tomatoes-both red and yellow which are gradually changed in the

some with the blossom ends; then I nitrogenous spring top dressings. take the juice that has run out of some that I have peeled to cook, having no seed nor pulp, and add a little salt and pour on my whole tomatoes crops. Probably one-half of the farm- a kettle of cold water, and let them nothing but glass jars-two quart jars-and after the cover has been on about five minutes, I take it off, so they will settle, letting the gas out; then I fill up with juice and seal again, and my cans are always full to the cover. A great many have not learned this. You have no idea how nice they look through glass; they show every vein and rib, and look as if they were put up raw, and when used they are just as if they had just been taken from the vines-and if you don't believe me, try it this summer. I always keep my fruit in the dark, and it don't fade through the 1. THE best soil for wheat is rich

clay loam.

2. Wheat likes a good, deep bed.

3. Clover turned under makes just

4. The best seed is oily, heavy, plum and clean. 5. About two inches is the best

depth for sowing the seed.
6. The drill puts in the seed better and cheaper than broadcasting. 7. From the middle of September to the last of October is the best

time for sowing.
8. Drilled, one bushel of seed per acre; if sown broadcast, two bushels

9. One heavy rolling after sowing does much good,
10. For flour, cut when the grain begins to harden; for seed, not until it has hardened. Save the Hay.

Corn will be scarce and high next Winter. That will send up the price of pork and beef to high figures. The only way to take the proper advantage of that condition of things is to save all the hay possible, to help make up the deficiency. Scarcity of corn will make high prices for all kinds of feeding stuffs, including hay. Therefore, whether or not one has a home demand for hay, for feeding, he should cut all the grass that Nature gives him this year. It is too often the case with Western farmers that they save only the cream of the grass crop, leaving that which is more scant, to fall down and go to waste. Every farmer this year should cut clean the thick and thin grass alike, cure it as well as the season will allow and store in stack or barn for Winter use or sale. Saving the products usually wasted, means the difference between large and small prof-

The Value of Clover.

Prof. Voelcker is one of the strongest advocates for clover in a farm rotation, and gives these as his conclusions upon its value and general character:

1. A good crop of clover removes from the soil more potash, phosphoric acid, lime, and other mineral matters, which enter into the composition of the ashes of our cultivated crops, than any other crop usually grown in this country.

2. There is fully three times as much nitrogen in a crop of clover as in the average product of the grain and straw of wheat per acre.

2. Clover is an excellent preparatory crop for wheat.

4. During the growth of clover, a large amount of nitrogenous matter accumulates in the soil. 5. This accumulation, which is

greatest in the surface soil, is due to decaying leaves dropped during the Many people who are quite suc- growth of clover, and to an abundance of roots containing, when dry from 13 to 2 per cent. of nitrogen. 6. The clover roots are stronger

deal of pride in canning fruit. I get fall on the ground, when clover is nearly all the prizes at the fairs. I grown for seed, than when it is wish you could just peep into my mown for hay; in consequence more cellar to see my tomatoes and peach- nitrogen is left after clover seed than

7. This crop causes a large accumulation of nitrogenous matters

8. Clover not only provides abundand expense, could not get water to and skin very carefully; take the ance of nitrogenous food, but delivstem out with a pen knife, taking care ers this food in a readily available not to cut the tomato so as to let form, as nitrates, more gradually and the juice or seed run out; then I place | continuously, and with more certainty them in the cans, some of them with of good result, than such food can be the stem end next to the can, and applied to the land in the shape of

> It goes without saying that oats is grown as feed for stock. Has it been demonstrated that the usual adopted mode produces the best results? If not, is it not worth inquiring into, by means of some carefully conducted experiment? We incline to think, judging from a limited experience in the matter upon our own farm, that oats cut before ripening, say when the grain is "in the milk," and treated and fed on hay, will furnish more and better feed than when allowed to ripen, threshed, and fed in the usual way. If this be true, the gain would be considerable, if the saving in labor should be added to the increase of the feed. Is not the experiment worth trying? Where "cut feed" is used for the teams, as is often the case on farms-and always should be a profitable modification of this plan may be made by cutting the oats while at the same stage of ripening binding it in sheaves, as usual, and using it in place of the time-honored rye-straw. Very much less than the customary amount of "chop feed" will answer, and the very unpleasant labor of threshing the oats will have been saved.

BAKED eggs are sometimes relished by those who find fried ones greasy and indigestible. Butter a deep earthen pie-plate then put in the eggs, taking care not to, break the yolks of any; put a little lump of butter on each egg, and a little pepper and salt, too. If the oven is hot, the eggs will be cooked sufficiently in four minutes. As soon as the whites are firmly set they are done.
