BELLEFONTE, PA. AGRICULTURAL. NEWS, FACTS AND SUGGESTIONS.

THE TEST OF THE NATIONAL WELFARE IS THE INTELLI GENCE AND PROSPERITY OF THE FARMER. Every farmer in his annual experience

discovers something of value. Write it and send it to the "Agricultural Editor of the DEMOCRAT, Bellefonte, Penn", a," that other farmers may have the benefit of it. Let communications be timely, and be sure that they are brief and well pointed.

Look Ahead.

One of the principal duties of a careful husbandman is to make frequent forecasts. "What work, what feed, what marketable produce have hibition without opning his mouth, I before me? The future is certainly mysterious and hidden, but on the other hand I know there is a winter to that all go to the Fir-all take provide for, a succession of crops to prepare for, and a large family of live stock to care for. Like the bees rious exhibits that are made by othand the ants, we must reckon on certain events that come with each year, are to be met as certainly as sunset and sunrise, or, shall we say? as our annual bills at Christmas time.

Stewing Tomatoes.

In our early married life we stewed tomatoes as we had always eaten them of the farm, garden, and household. at our mother's table-that was, stewing until fairly done (cooking about 30 minutes) and seasoning liberally with butter, pepper and salt. The Major kindly interrogated us as to whether we liked tomatoes so "wanervous woman. The round of breaktery," and were they cooked enough, etc. To all such question we answer. evitable dish-washing, chafes and irritates our hearts and lives. Oh, if the ed with a smiling "yes," actually pitying a palate that preferred the strong, burnt taste of long-cooked it could be so arranged that life would tomatoes. Soon the request came go on for awhile without this weary round. The men find food for thought that we would please cook tomatoes and variety of duties in their out-offor him until the pieces were stewed to a pulp and the juice sufficiently door toil; for them seldom are two days' labor alike. But not so with a evaporated to make a thick sauce-in fact, to cook them gently for three or four hours. We have grown now to perform, and who knows that they like them so cooked, and when seasoned with plenty of butter and salt sity to have a change in their lives. with a dash of pepper, we think they and a trip to the seaside or the mouncannot be beaten.

Be Sure the Land is in Good Condition.

"I don't advocate thin seeding as day House" how the children were the general rule," says a writer in the all busy preparing for it, each having Husbandman, "because I know that not one field in ten is well fitted. Get bition, and a prize is of so much that condition and anything beyond value in eyes that are unused to the three pecks is thrown away. I want lottery of life. The thought and care it understood that when I recommend necessary in the preparation of any thin seeding it comes after thorough article for exhibition brighten the fitting. Get that fact well in mindattend to the fitting-and there is no anticipations. To strive to excel is earthly use of distributing seed that good discipline for young or old, and won't have room to grow. But it's we are glad of even this break in the of no use to talk about it, for nine routine of living. Let father or husbushels of wheat, or three of oats home worthy of the name. need crop. I have seen wheat this year as the tired hands. To do this there is thick as I want to see it, and only nothing better than the county show acre. But, mind you, the land was kindness and interest .- Rural New

Go to the Fairs?

Milking.

A. Willard, in Rural New Yorker. The first point to be observed by milkers is extreme kindness to dairy stock-no loud talking or rough treatment of any kind should be allowed while milking. The animal should become well acquainted with its milker; should be made to feel a perfect trust and confidence in this person's good intention, so as to be kept as quiet and free from excitement as possible. This is best effected by petting the cow, handling her one, every on making it a point to gently and speaking in low, kind, cheery tones. Cows that are frightened, that are kicked and beaten for every misstep they make while being milked, not only fall off greatly in their yield of milk, but their milk is rendered unwholesome and often so much so as to cause disease and death to persons partaking of it. The changes which milk undergoes under such circumstances have not been fully explained, though as a physioers. In this way the day at the Fair logical fact the unwholesomeness of such milk has been long observed, and made record of, by the medical profession. It should be borne in mind, therefore, that anything which that has been used as a means for the cow uneasy, lessens the quantity frets, disturbs, torments; or renders better understanding of the products and vitiates the quality of her milk.

The quality of milk that a cow gives depends much upon the mode, time and regularity of milking. Cows do best that have one regular milker, and the time of milking should be carefully attended to and not be subjected to variations from day to day The bag should be brushed of any loose hairs, and in case of any dirt on the udder it should be cleansed by washing with a cloth and fresh water. For if the cow has been driven through any muddy places and thus become smeared, any dirt accidental. ly falling in the pail will communicate its taint to the milk. The practice of wetting the hands and teats with milk before milking is a very vicious practice. This should always be avoided, both for the comfort of the animal and the cleanliness of the milk. The milker should have short finger nails, for long nails will be sure and mind for renewed labor. And to hurt the teat and cause irritation what interest attaches to a trip to the to the cow. There are two methods of milking-the one may be called stripping, or catching the teat between the finger and thumb and stripsomething to show at the City Exhiping down the whole length of the teat. This plan is not to be recommended. The better way is to grasp the teats, one in each hand, diagonally across the bag, and press out the milk-the second, third and fourth eyes and fill the soul with pleasant fingers doing the main work, while the upper portion of the hand and first finger prevent the milk from returning to the udder : the milk should be drawn rapidly, and the udder farmers out of ten think they know band not forget that those who look completely emptied of its contents. better. They will go on sowing two after his comfort and make him a In the flush of the season, or when cows are yielding the most milk, from because they can't persuade them- recreation and amusement to lighten 11 to 12 cows per hour will be about selves that any less will bring a full the cares of housekeeping and rest the rate for a competent hand. A slow, dilatory milker makes a great loss in the yield of milk and if possithree pecks of seed were used to the with its variety and its neighborly ble ought never be allowed to milk, except, perhaps, when cows are going dry at the end of the season. As the last drawn milk is the richest in but. ter, great care should be taken that and this is important, not only on account of the value of such milk, but because the habit of leaving a part of the milk undrawn has a tendency to dry up the cow and weaken her capacity for yielding a full flow of milk another season. To be a good milker is an accomplishment which some persons can never attain. It requires a muscular hand, honesty, or conscientious integrity in the discharge of duties. good nature, or complete control of ONE of my neighbors thinks that temper, at least while milking, and a scrupulous regard to cleanliness. Unless perfectly trusty hands can be employed in milking the dairyman should give personal attention to the milking, and if he does not milk himself he should see to it that those in the salt out of the corn. She also his employ perform the work properly finds tomatoes very delicious, indeed, in every particular; for it is upon to fry them in slices in beef suct, pack the manner in which this work is perthem in jars and fill up with hot suet. formed that his profits from the dairy will be in a great measure regulated -one blow on the spine with a milking stool in the hands of a passionate, ill-tempered man, or a kick on the udder, may ruin a cow forever.
