

Kaufman's Cheapest Corner, Pittsburg, Pa.

MIRACLES DISTANCED AND WONDERS ECLIPSED!

A WELL KNOWN STAR VISIBLE TO ALL A CENTRE OF ATTRACTION

TO EVERY VISITOR AND STRANGER IN THE CITY

SUCH IS

KAUFMAN'S CHEAPEST CORNER.

83 TO 87 SMITHFIELD STREET.

THE LARGEST and ONLY RELIABLE ONE PRICE CLOTHING HOUSE in PITTSBURGH.

OUR CLOTHING

Is Correct in Designs. Faultless in Fit.

Manufactured with extra care in regard to durability and delights everybody. PRICES THAT HAVE NO EQUAL.

MEN'S DEPARTMENT.

THE PEOPLE DELIGHTED: DON'T BE PERSUADED:

With Our Famous London Sack Suits, To purchase elsewhere until you have in Domestic, Dark and Fancy Goods, seen Our Excelsior London Frock Suits, in Domestic, Dark and Fancy Goods, from \$3.50 to 12.00.

IT WILL PAY. EVERYBODY PLEASSED

To come any distance to see Our Fam- With our choicest silk and satin trim- ous London Sack Suits in Finest im- med Excelsior London Frock Suit, in ported Fabric, from \$10.00 to \$22.00. in finest French and English from \$12.00 to \$25.00.

BOYS' DEPARTMENT.

Boy's "Harvard" Suits from \$2.12 to Children's "Oxford" Suits, from \$1.50 to \$6.50. Boy's "Windsor" Suits, from \$4.00 to Children's "Croquet" Suits, from \$2.37 to \$9.25. Boy's "Brunswick" Suits, from \$7.50 Children's "Dengremont" Suits from \$13.75. \$3.50 to \$7.62. Don't forget to ask for our leader Boy's Largest assortment of Children's "Kilt" "West Point" Overcoats. Suits in the City.

Our Elegant Hat and Furnishing Goods Department.

And elegant they are, both in their appointments and in their stock, such a varied assortment for man, boy and child, has never before been collected in any one Pittsburgh store. Now as to our prices. They are low—lower than they can be found anywhere else. No way can this be more easily demonstrated than by a visit of inspection, which costs nothing.

YOU ARE INVITED

To make our Stores your headquarters when visiting Pittsburgh. It is the most central point in the city. We have a commodious package department, where you are invited to leave your bags, bundles, baskets, etc., and receive a check for them. We will take good care of them for you. We have nice toilet rooms, fine passenger elevator and comfortable chairs, in fact every thing to make it convenient for you.

Again, we say come to our Stores, we want all residents around and about Pittsburgh to become acquainted with us and make themselves perfectly at home at

Kauffman's Cheapest Corner,

83 TO 87 SMITHFIELD ST., Cor. DIAMOND STREET.

We send without charge or any obligation to purchasers, samples of clothing, etc., we give prices of our entire stock in our low catalogue for Fall and Winter which is mailed free to all who send their address. Hundreds of orders are filled daily goods expressed to every State and Territory, with full privilege of return and refund of money if they are not satisfactory.

WHOLESALE AND RETAIL.

WEEKLY CINCINNATI TIMES.

Eight large pages—24 columns—and only costs One Dollar a year, and is received as a beautiful picture or useful book to every subscriber. The content, largest, largest, clearest, and best weekly paper published. It is more generally taken the country over because it is the best, and it is made the best because it has the largest circulation, and therefore the largest advertising rates. It is the easiest paper to get subscribers for, and our terms to agents are as extra and liberal as any.

THE CINCINNATI TIMES-STAR

Is the best and cheapest daily paper published in the West. Eight pages—24 columns—and only six dollars a year, or 12 cents a week. The Daily Times-Star is the only eight page paper in the country published at this price. It is independent in position, but aims to be fair in its reporting, and just to all parties, individuals, sections, and nationalities. If you want all the news attractively and honestly presented subscribe for it. The largest circulation of any paper published in Cincinnati. The postmaster will receive your subscription if there is no agent in your place.

The Centre Democrat.

BELLEFONTE, PA.

AGRICULTURAL.

NEWS, FACTS AND SUGGESTIONS.

THE TEST OF THE NATIONAL WELFARE IS THE INTELLIGENCE AND PROSPERITY OF THE FARMER.

Every farmer in his annual experience discovers something of value. Write it and send it to the "Agricultural Editor of the DEMOCRAT, Bellefonte, Penn'a," that other farmers may have the benefit of it. Let communications be timely, and be sure that they are brief and well pointed.

A CORRESPONDENT of the Philadelphia Record calls upon the superintendents of the public squares of that city to destroy the caterpillars' nests which may be found now upon the trunks of the trees, and thus prevent the ravages of the worms next summer. Farmers should apply the hint to their orchards.

A "COLD FRAME" is simply a "hot bed," minus the heat. That is instead of having a manure pile under it to generate heat, it is placed upon the ordinary soil of the garden. Of course, a layer of two or three inches of good, rich garden compost spread over the soil, or mixed intimately with it, will add largely to its efficiency. In this may be planted, in September, a few rows of "onion sets," one or two of the winter varieties of lettuce, a row or two of corn salad, and even a few radish seeds. All these will start nicely in the growing weather of the fall, and if, upon the approach of cold weather a few wheelbarrow loads of manure are banked up around the outside, and the sash put on—which should be covered with a few loose boards during the very severe weather and snow storms—the owner will be rewarded with a taste of "green stuff" at a time when it will be most highly appreciated.

BEFORE many weeks the cold fall storms will be upon us, and in all probability before many of us are fully ready for it, winter, with its demand for feeding and housing our stock, will be here. It is none too early to think of our preparations for meeting these demands. In very many cases, farmers will be better prepared with feed than with shelter. The importance of warm stabling is not appreciated as it should be, because of comparative ignorance concerning it. Prof. Sanborn, of the New Hampshire Agricultural College, conducted some feeding experiments last winter in which the effects of proper shelter were shown to be of great economical value to the stock owner. He provided specially warm stabling for fifteen cows, at a cost of \$30, and then changed them from this to a cold part of the barn, noting the amounts of food eaten, and the changes in the milk flow. Without stopping to give his figures in detail, it is enough for our present purpose to say that he found the total of feed saved, and milk gained by the use of the warm stabling amounted to eleven cents per cow per day. Mr. Sanborn says: "These facts were carefully taken over a period of nearly three months, and in their results show that I nearly got the cost of improving the stable for the first winter, or about one hundred per cent. interest for four months."

From a private letter we learn that a number of the leading farmers of Lycoming county are looking toward the organization of a company having for its object the improvement of farm live stock. This is a very wise step, and we hope to hear of the successful organization of the company. A company of farmers with this object in view, properly organized and wisely directed, cannot fail to prove directly remunerative, not only to the stockholders, but to every live-stock owner in the community in which it conducts its operations. Individual effort is not equal to the task of making the universal improvement in our farm stock which the best interests of the farmers demand, but there is scarcely a township, certainly not a county, in the country in which there could not be formed a combination of enterprise and capital, drawn entirely from the farmers, with strength to accomplish speedily this much to be desired end. To be able to chronicle the advent of such an

organization in every county in the land, would be to chronicle a long step in the real advancement of agricultural interests, and we should be glad to note Centre county as a leader in the good work. The stock interests of the county demand it, and we have an abundance of means in the hands of men well qualified for conducting such an enterprise. Why should we not have it?

Clippings and Comments.

Owing to the general scarcity of corn throughout the West, hogs were turned out to grass, causing a decided falling off in the number of fat swine.—American Cultivator.

It may be true that this will give us less fat pork than usual, but it is certain that what we do get will be all the better, and more healthful. An almost exclusive corn diet, and the abominably filthy manner in which it is fed, are in a large measure responsible for the many ills to which western swine flesh has fallen heir, and if a series of short corn crops will serve to teach pork farmers that there is a better way open to them they will not be surmised evils.

We know a farmer's daughter in Bucks county, Pa., who had two turkey hens this year from which she got and set 113 eggs. The pigs destroyed two nests of eggs after they were set for incubation; but she succeeded in getting sixty young ones raised in spite of wet weather, bad luck, and the usual vicissitudes of the business. She says she is going to get enough of money out of her two turkey hens to buy herself a first-class sewing machine by Christmas, besides having a nice turkey for Thanksgiving and one for Christmas dinner.—Farm Journal.

This is but a fair sample of what may be done by the younger and weaker members of the farmer's family. There is neither mystery nor hard work about poultry raising. It does require care and attention, but not more than any ordinarily intelligent boy or girl of fourteen can give. And for that matter we know of nothing in which any boy or girl, man or woman, can succeed without care and attention. Perhaps this young lady had parents who were wise enough to encourage her in her laudable ambition, and possibly many more farmers' boys and girls would follow her good example, if they were stimulated by like encouragement.

Renovating Old Orchards.

Wm. Roberts, in Philadelphia Press.

There are many apple orchards containing large old trees that have been neglected, with their dead branches and dilapidated appearance, look as though they were worth more for firewood than for anything else. If the bodies of such trees are sound and a fair proportion of the limbs have life enough to make a little new wood each year, they may be made profitable by vigorous and judicious treatment.

The worst trees, or those past remedy, should be cut out, and one need not be very careful about picking up the chips, bark and twigs; let them lie to rot and be trodden in, if not too much in the way, for when they are decomposed they are the best manure for the trees, as the decomposed matter of any plant is the best manure to apply to it again. The trees left standing should be severely pruned; all dead limbs cut out and boiled linseed oil applied to their stumps with a paint brush; the other limbs should be cut back sufficiently to make them throw out new wood. The bodies should be scraped and washed with a mixture of one pound of soda dissolved in each gallon of water sufficient to make a strong suds. This treatment and an application of wood ashes or manure will soon make a remarkable change in its appearance. The chip dirt that many farmers allow to accumulate around the wood pile is excellent to apply as a top dressing on an orchard.

I had an apple orchard come into my possession forty years ago, with very large trees, and which were said to be seventeen years old. Their dead limbs and mossy sides presented a dreary look for an orchard. The apples were natural fruit. I trimmed it heavily, plowed and planted it with fodder corn for two or three years in succession, manuring it moderately, and as the trees threw out vigorous suckers, I grafted them; then I gradually cut away the old wood as the suckers grew, and so gradually formed new tops of good fruit. I lost a very few trees during the process, but I gathered much good fruit from the orchard for twenty years, and am told that some of the trees are living now.

A neighbor of mine had an apple orchard in a similar condition, and he proceeded to renovate it in the same way. He gave it a liberal manuring with wood ashes, but instead of plowing it he fenced it and used it for a sheep pasture. He grafted the suckers and thrifty limbs as fast as

their appearance would warrant, and as it is well known that sheep will improve the land they run on, the orchard grew thrifty and I saw many good crops grown from it. Grafting suckers is not the nurseryman's approved style of managing an orchard, but in a case like this it is better than cutting it down. Even if the trees are old, they will furnish good fruit sooner than newly-set trees will do; but in the meantime it is advisable to set out young trees to take the place of the old orchard when it fails.

Bread and Butter Business.

From the Philadelphia Record.

Let him drive fast or slow, it is the farmer who makes the pace for the country. The good crops of 1878 and 1879 were the inducing cause of the good times in 1880 and 1881. The short crop of 1881, following upon the great drought that burnt up the life of the fields in the last half of the year, operated to slow up and slacken the development of business in every branch of enterprise. There was no department of trading or manufacturing industry that did not feel the pressure of the brakes. If the yield of cotton and of the earlier grain crops had been as deficient last year as the yield of corn there would probably have been as sudden, general and disastrous a collapse in business operations as there was in 1876. But the cotton and the surplus of more plentiful years pulled us through. We are now, in all human probability, upon the verge of another season of plenty. There will be scores of political philosophers running around the country ascribing the bounty of Providence to the provision of public functionaries or to the operations of the tariff. But the lesson of 1881 should not be forgotten. It is no longer to be reckoned among the impossibilities that some wide reaching calamity may not blight the harvests from the Atlantic to the Pacific coast. When the farmer suffers, the foundations of the structure of society are disturbed. "You take my life," cried Shylock, "when you do take the means whereby I live." Men must eat, and it is high time that the great industry of the country that appears upon its sturdy shoulders all the others should no longer be made a packing-horse to carry unnecessary burdens. The sole bread producer should not be the chief of taxpayers. The farmer asks for no protection. He fearlessly enters into competition with the rest of the world, and takes his chances in the open market. But it is about time that he should have recognition for what he is worth in the federal economy. He will soon demand the freedom and fair play which he readily accords to men of all other occupations at home or abroad. He has the power to enforce his demand. But those who believe that the ox should be muzzled that treadeth out the corn ought not to stand upon the order of their movement in advocating such changes in the revenue laws as are necessary to put the farmers of the country upon an even footing with their fellow-citizens engaged in other occupations.

An Experiment with Fence Posts. Sixteen years ago I experimented with fences, and find seasoned oak posts oiled and then tarred with boiling coal tar makes them last the longest. I took green posts that were sawed five inches square at one end and two by five inches at the other, and seven feet long. I tarred half as many as would build my fence, and the other half I put in ground green without tar. In five years after the tarred posts were nothing but shell under the ground, all the inside being decayed. Some of the other posts were about half rotten. Two years after I built another fence with seasoned oak posts, same size as the first, giving them all a good coat of oil, and in a few days after tarred them as I did before with coal tar, heated in a can made for that purpose, four feet deep and large enough to hold four posts set on end; left them in the boiling tar about ten minutes, then took them and sanded them. And now, after fourteen years, not one in ten needs replacing. I shall never build a fence requiring posts without first thoroughly seasoning, then oiling and then tarring them. If they are tarred when green the tar does not penetrate the wood, and in a short time will all scale off. When the wood is seasoned the oil penetrates the wood, and the coating of coal tar keeps out the moisture, thereby preserving the wood from decay.

THE milk peddler who starts out in the morning with a forty gallon can of milk and another of water, can, by keeping the first replenished from the second as often as a gallon is sold, keep up quite a show of milk. But the attempt to keep up a milk farm by returning to it only the manure made upon it would result in much the same sort of a sliding scale of decreased production.—O. S. Bliss. THERE is no other calling in the success of which the whole community is interested so deeply as that of the farmer, for his success means "good times."—Ohio Farmer.

KIDNEY & WORT IS A SURE CURE for all diseases of the Kidneys and LIVER. It has specific action on this most important organ, enabling it to throw off torpidity and inaction, stimulating the healthy secretion of the bile, and by keeping the bowels in free condition, effecting its regular discharge.

PE-RU-NA For pain in the limbs, back, stomach, head, etc. For cramp of the stomach, colic, diarrhoea, or vomiting, take PE-RU-NA. For cough, asthma, night sweats, shortness of breath, take PE-RU-NA.
