NEWS, FACTS AND SUGGESTIONS

THE TEST OF THE NATIONAL WELFARE IS THE INTELLI-GENCE AND PROSPERITY OF THE FARMER.

discovers something of value. Write i send it to the "Agricultural Editor of Democrat, Bellefonte, Penn'a," that farmers may have the benefit of it. mmunications be timely, and be sure that they are brief and well pointed. WE rather suspect that "Mrs. Annie S. Carr's" Incubator letter, from which we make a short extract in our "Clippings and Comments" column,

is intended as a cheap mode of ad-

vertising an incubator. If so, it is

ingenious but brazen. THE National Tobacco Associa tion memoralizes Congress not to allow growers to sell leaf tobacco to consumers, or, in other words to continue the restriction of the grow ers' market to the comparatively small gang of manufacturers and dealers. That's right gentlemen Keep the screws tightened down or the farmer at every possible point.

Speaking of the present dullness time to figure out what else you can raise to the best advantage."

SENATOR DAVIS, of West Virginia, is one of the few men in the National Legislative body who take an active interest in furthering the agricultural interests of the country. A couple of weeks ago he made a speech in the Senate in advocacy of the bill to enlarge the powers and duties of the Department of agriculture which bristled with interesting statistics, and tables. Among others was one showing that in 1881 the total farm products of the country amounted to about \$3,500,000,000. a sum greater, as everyone knows, than our entire national indebtedness. Another showed that the value of the three leading crops, corn, cotton and hay, for the same year was over \$1,400,000,000. Still others show that over 80 per cent. of the value of the total exports is furnished by the agriculture of the country, and that the average duty paid upon articles used most largely by the farmer is near 40 cent. In addition to these tables Mr. Davis gave the following figures which cannot fail to be of interest to every

"Russia is our great rival in agricultural products, and she expends branding iron." more money, as I have before said, in a single year than the United States does in ten. Let me state some of the amounts expended by best things that could be done to save States does in ten. Let me state European governments in aid of agreed, for it is true that stock in a warm stable will eat less and require less to come possessed of a practical knowless. \$5,012,350; Prussia, \$4,054,875; Aus \$5,012,350; Prussia, \$4,054,875; Auscald wind is allowed to blow into it.
tria, \$5,006,767; France, \$7,271,375;
The 21,589,900, and the Vision the cracks and make stables several de-Italy, \$1,589,900; and the United States for the last ten years has ex.

States for the last ten years has ex. pended \$2,747,496, and for the past year, 1882, \$366,280. These figures show clearly that any one of the leading powers of Europe expends more annually for the care of agri
more than farmers imagine. As barris are usually constructed the foundation walls consist of loose stones more or less tumbled down, through which the wind penetrates, making the Goor as cold as the matters little whether the proof. culture than we have in the last ten

fifty-two lawyers-fifteen or sixteen to one. In the British Parliament there are one hundred and eight lawthree farmers to represent 12,000,000

EVERY crop that the farmer to from his land is so much profit & capital from continually decreasing, cution. he must return to it as much as he John M. Stahl.

Steaming Fodder

important as a matter of economy that it will pay, even though done with little regard to the saving of to cook the feed for meat cattle with profit, not only should there be ani a saving may be effected in that way. Besides, the object for which the cattle are kept is an important factor to be considered in the feeding. The flow of milk is increased by steaming the fodder; the color of the butter s, however, injured. The same ration will prove more fattening, while, it the same time, there will be little ir no waste if the steaming is well managed. It is best to have the and uncertainty in the tobacco leaf steamed ration composed of a variety trade, on account of the tardy action of feed, such as cornfodder, roots, thousands of acres gather thousands of Congress regarding the tariff, the nay or oats straw, with bran and corn of bushels, and when these acres are Connecticut Farmer gives a line or meal, or cotton seed, or linseed oil two of excellent advice: "Don't place cake or meal. The substitution of your whole dependence upon a single one kind of fodder or meal for an. from the soil he cultivates derives a speculative crop. It is an excellent other gives variety and relish. The coarse fodder is cooked soft, and the flavor of the roots and of the meal pervades the mass.

Clippings and Comments.

An incubator is real easy to manage, An incubator is real easy to manage, and takes but little time, one hour a day being sufficient. You can hatch all the fertile eggs and hatch them early, before you get hens to set. I have now five incubators made, and I expect to hatch 5.000 next year, and I know can clear 50 cents on each chick.—Mrs

they are hatched."

The Tempering of the Cream.

Taking the word "fodder" in the The tempering of cream is one of broadest sense, as any kind of food the most important operations in for graminivorous animals, we may butter making. This is especially say that it will always pay to steam true in cold weather. The different or cook feed for swine, and often for parts of cream are affected different cows in stables containing twenty- ly by heat. A can of cream may be five head or more, while for sheep placed in a kettle of hot water and and horses it will be of doubtful ex. heated till the thermometer indicates pediency, and usually not advisable 62 to 65 degrees without having under any circumstances. The cook. heated the butter globules in the ing of feed for fattening swine is so cream at all. This will not ordinarily be the case, it is true, but it is liable to be, and it is approximately so in all cases where the heating is labor and fuel. On the other hand, rapid. Cream should be kept warm for several hours before churning that it may become warmed through. mals enough to make it pay but the Or, if it is necessary to temper it rations should be so carefully plan. hastily, it should be raised considerned that by mingling of palatable ably above the churning temperature with less relished and coarse fodder and suffered to fall back, which it will do in a short time.

Successful Farming.

A. W. P. in Philadelphia Frees. Successful farmers are a curiosity, and agricultural editors pay them visits of inspection, and "write them ap" for the instruction and emulation of the agricultural fraternity. By a "successful farmer" is meant one who from his farm makes a living for himself and for his posterity. Not exhausted abandons them for fresh fields and pastures new, but one who subsistence constantly augmenting, and finally leaves his capital unimpared, and possibly increased to his successor.

Preventing Garget.

Garget or caked bag is not by any means an uncommon trouble with new milch cows, and those which are best fed and best cared for are not liable to meet with it. Now that the cows are soon to "come in," the fol-"Don't count your chickens before lowing advice upon the subject from the Breeder's Gazette will prove a "word in season": "If there is a An English paper asserts that it costs large accumulation of milk before calving, it will be well to relieve the cow of some of the milk, twice a day, but without taking away all. But If that be true how far can the immediately after calving, the udder tumefaction should be detected on any part of the udder, it would be well to also liberally anoint the udder twice a day with hog's lard."

Help Your Paper.

or, of Home and Farm Everybody should help the agricultural press. All farmers should take a farmer's paper. Everybody ments and suggestions that other people can profit by. Whoever wishes for information should be willing and ready to impart it.

edge of farming than for the farmers of a neighborhood to form themselves into a club and hold weekly, or at least fortnightly, meetings, for

It matters little whether the meetings are formal or informal in their character, provided the one object is kept constantly in view-that of giving and imparting knowledge. Those who put the most labor and thought into the business of the club will be the most benefited by the meetings. -John Dimon.

As it is almost impossible to make a horse unlearn any thing he learns, very great pains should here be taken to guard against error. For this future to try and repeat.

THE farm is the chief support of human life; the laboratory that compounds and supplies the materials of which men are made. - Hugh T.

As an absorbent dry coal ashes are:
