

LOST IN THE BUSH.

A YOUNG GIRL'S TERRIBLE EXPERIENCE IN AUSTRALIA.

Graphic Account of the Finding of a Child Who Had Been Lost in the Wilderness for Three Weeks.

[Melbourne Arxus.]

A special correspondent gives the following graphic account of the finding of a young girl, Clara Crosbie, who had been lost in the bush for three weeks: "It was on the twentieth day after the girl left Mrs. Haines' house that a couple of friends started out to look for a horse which had strayed in the ranges. J. G. Curwan, a farmer and contractor of Warburton, who has been fourteen years in the district and knows his way about, was accompanied in this quest by William Smith, a piano-forte tuner of Kew, who was on a tour through the district. They struck the Cockatoo creek, and as they watched the turbid stream flowing through the oozy bed of a large morass, Mr. Curwan began to expatiate upon the advantages of canals for drainage purposes with as much fervor as the late Hugh McColl used to praise canals for irrigation purposes. The friends grew so interested in the subject that they got off their horses to discuss it, and they were soon deep in the history of the Suez canal and that of its engineer, De Lesseps. Then remounting and skirting the swamp, they were riding rapidly away, when Mr. Smith found the head of a starved domestic cat, which had vainly sought succor in a hole in a tree. Mr. Curwan obliged his "town chum," as he calls him, by waiting till Mr. Smith once more left his saddle, and with a stick fully dismounted the feline victim of misplaced confidence in the nutritive resources of the Lylidale bush.

He was just mounting again when a low sound like a young blackbird's whistle caught the acute ear of the experienced bushman by his side. "Hist," said Mr. Curwan. "What's that?" Again the wailing, plaintive note was born softly on the breeze. It was enough this time. Mr. Curwan was sure it was a coo-e-e. I never, he says, hear a coo-e-e twice in the bush without answering it. I answered it and the soft, weak voice came to me again, yet a little louder. I was sure something was wrong, but I could not say where the sound came from because of the echo of the hills. I galloped up the rise in front of us and coo-e-ed now and again. Every time we coo-e-ed—indeed, oftener—we got the response of that low yet piercing note of distress. When we got on to the hill I was sure the voice came from the swamp we had left. As fast as logs, bogs and ravines would let us we advanced toward the spot where we had been talking about canals. I heard some one speaking, but could not make out the words, and the scrub was so thick I could not see anyone.

At last I caught sight of a little girl, and it went to my heart to see her so thin and woe-begone, but I could not believe it was Clara Crosbie, or that she could have lived so long. The little creature was tottering toward us in her ulster, without shoes or stockings on, but quite sensible. She said, "I want to go home to my mother. I have been lost three weeks." She was so weak that she could scarcely stand. I jumped off my horse, but my coat around her and took her up in my arms. She said she wanted a drink, but I wished to hasten back to the camp with her, as I was afraid she might go off. It would have been terrible for her to have died in my arms after all she had suffered and I had found her. She said she had lived in a tree, and used to go for water, but that she had been too weak to go for any for two days, and I could quite believe it. She said her clothes were in the tree, but we did not stay to look for them, but started home at once.

Mr. Smith went on to bring some tea, and, although he can't ride, I never saw a man go across country in better style, as if there was such a thing as breaking his neck in such a tangle. He met me half way, but I had given the little thing a drink out of my hat before that. Didn't she lap it up eagerly, and then talked all the more about how she wandered away and crossed the creek and found the hollow tree, and got too frightened and too tired to travel any more. We gave her some tea and toast, and when we got to the camp the cook said he saw a man who was lost in New Zealand, and the doctor gave him some oatmeal with some brandy in it. But Clara smelt some pork and potatoes and she did beg hard for some of that dinner. I believe she thinks me hard to this day.

After she had eaten a little and now that she felt quite safe and the excitement was over, she began to look worse than when we first found her. We could see the ravages which hunger and exposure had made, but, considering what she had gone through, she was wonderfully chirpy. She kept asking to be taken to her mother. She was taken there in the blankets of six of the boys, for every man wanted to have a share in wrapping her up, and then she was washed and put to bed by Mrs. Claxton at the hotel, which was nearer than her mother's house. She has been improving ever since, but you will see for yourself by and by, and get her to talk to you. In a week she will be as right as ever, but it was a close shave. I don't think she would have lasted another night, as the next night a stiff frost was on and she had got too weak to go to the creek for the water upon which she had lived. How she lived God knows. I have seen men used to hardship knock under in a fourth of the time. And then think of the loneliness and the wildness of the place where she was found. It was enough to drive a child like her mad. She's a living wonder."

A Russian City's Growth.

[Exchange.]

Cities of marvelous growth are not confined altogether to the New World. Baku, the center of the petroleum district on the Caspian sea, twelve years ago had 12,000 inhabitants, and now boasts a population of nearly 60,000.

Varieties of Fruit.

There are 1,900 kinds of pears, 1,200 sorts of apples, 150 plums, more than 150 varieties of gooseberries, and about 125 of strawberries.

For Rheumatism.

There seems to be trustworthy evidence to the fact that boiled cereal—not the raw stems—is a preventive of rheumatism.

The Grasses of the United States.

According to Dr. Vasey, number 120 genera, embracing 675 species.

Pittsburg Chronicle-Telegraph.

The contemptuous way of treating men is fast going out of date.

The tomato is being introduced into Turkish gardens.

where it goes as the red egg plant.

THE MILLER AND THE MAID.

[F. N. Scott.]

Across the heath and down the hill, A-back of patient Dobbin, The farmer's daughter rides to mill, And mocks the thrush and robin.

For saddle she's a sack of grain, She sidwies sits and chirrup; A finger in old Dobbin's mane Is good as forty stirrups.

The miller comes—a merry blade— And doffs his hat and greets her— "What wish you here, my pretty maid? "I've brought a sack of wheat, sir."

"And have you gold to give for grist? "Not I, we're poor, alack! sir; But take your toll—a tenth, I wist— From what is in my sack, sir."

He lifts her lightly from her seat, And laughs—a merry miller!—"I cannot take my toll in wheat, I must have gold or silver."

"But since you've brought no coin nor scrip, He smiles and fondly eyes her— "I'll ask no toll, but from your lip— One kiss!—who'll be the wiser?"

The maiden blushed and bowed her head, And with her apron fingered, And pouted out her lips of red, Where countless kisses lingered.

"A single kiss!" (She smiled in glee, As who would say "I've caught you,") "My father said your toll would be A tenth of what I brought you."

The mill-stream shouted to the sands: "He kissed the farmer's daughter;" But the grim old wheel stretched out its hands, And spanked the saucy water.

He Was Paralyzed. [New York Herald.]

Curiosity was on tiptoe, and yet there was no need for the police. The place was Twenty-second street and Broadway; the hour half past 11. The horse cars, packed by muscular conductors, came to a standstill, for wagons, coupes, and hansoms blocked the track, while the drivers wildly waved their hats and shouted. Men laughed, women smiled, the policeman on the corner grinned officially, and two dudes stretched their long, thin necks above their collars to see what was going on.

This is what occurred: A drunken man staggered through a lane left for him by the passers-by, who got out of his way, a blind cripple sat on the pavement grinding out bad music with one hand, while his other arm and his leg hung helplessly; about his neck was a string and to the string was a sign, "I am paralyzed." Two well known members of a certain fashionable club saw the drunken man and the beggar. In an instant one of the club men stepped up to the beggar, saying: "I will give you \$2 for the sign."

"It is yours," said the blind beggar, taking it off. Before his friends knew what he was about the buyer of the sign had stepped hastily forward and had neatly thrown the string over the almost unconscious drunken man's head, attaching the sign to him.

The drunken man reeled along his way bearing on his back the unnecessary notification to the public in great white letters, "I am paralyzed," to the intense delight of a small army of boys who hastily congregated and saw him safely into the hands of one of "the finest."

Limitation of Yellow Fever.

[Medical Exchange.]

The limitation of yellow fever to restricted areas is one of the characteristics of this disease, even when epidemic, and it takes some curious phases. The specific gravity of the poison is great, and it clings to surfaces. "Frequently its rate of progress may be mathematically defined," says Dr. F. W. Reilly, "so many feet per day independent of any recognized influence, except a perpendicular obstacle." In Mobile a board fence held it at bay for weeks in Memphis. Hence the value of removal and the sanitary line when this disease appears.

Alarmed Hawaiians.

[Chicago Times.]

Hawaiians are becoming alarmed at the rapid change taking place in the population of the islands. During the month of June there arrived at Honolulu 144 white persons, three Hawaiians, 224 Asiatics, and there departed during the same time 62 whites and only 215 Asiatics, showing a total change in favor of the Chinese of 867 persons. By the census of 1884 there were 1,955 Chinese on the island, which is known to have since increased 11 per cent., while during the past year the English speaking race has fallen off about 8 per cent.

Pine Needles for Stuffing Cushions.

[Chicago Herald.]

A new industry in the southern forests is the utilization of the needles of the long-leaved pine—Pinus palustris. The leaves are soaked in a bath to remove the glazing, then "crinkled" for stuffing cushions and other upholstering purposes. They are especially valuable on shipboard and other places where furniture is in danger of becoming infested with insects. The turpentine which remains in the leaves makes a most inopportune abode for these annoying insects.

Japan's Patent Law.

[Exchange.]

The Japanese have at last promulgated a patent law. The new law appears like many other recent Japanese laws, to be compiled from similar laws of other countries—a clause from England here, from France there, from Germany in another place, as seemed advisable in the circumstances. The term of protection is fifteen years; articles that tend to disturb social tranquility, or demoralize customs and fashions, or are injurious to health, and medicines, can not be patented.

The Station-Master's Garden.

[London Letter.]

The poetry of the English railroad is the station-master's garden on a narrow strip behind the platform, and "nothing has been more welcomed," says a writer on railways, "in American railroad management than the imitation of our English brethren in their treatment of their stations, and nothing is regarded with a more lively or sympathetic interest than the horticultural ambitions and struggles of the station-masters on some of our leading lines."

A Barbarous Brazilian Custom.

In Rio Janeiro is a large and gloomy convent in which the wives of soldiers are confined during their husbands' absence. The barbarous custom is sanctioned by age, and one woman has been confined twenty-five long and dreary years.

Latest in Sunflowers.

The latest fancy in sunflowers is the using of the stalks for bean poles. The seeds are planted at proper distances, and as the stalks grow the leaves are removed, thus forming an excellent pole for the beans.
