PROGRESS IN JAPAN.

1 243

HOW THE PEOPLE BEGAN FARMING ON THE AMERICAN PLAN.

Manufacturing Agricultural Implements Under Difficulties-Trial of the First Plow-The Natives Greatly Astonished. Watching a Mowing Machine at Work.

In a few days I received the somewhat startling notice that the government had de-termined to adopt say advice, and that in a few days a force of mative mechanics would be ready to work under my directions manufacturing the implements. As I was no mechanic, and as I had always thought I had no mechanical ingenuity, I was in a very serions dilemma. To say that I could not do it was to lose all prestige. On the other hand, an attempt to do it would almost surely end in failure. I consulted with my American friends and they all encouraged me to go micaul and do the best I sould. If there had been models to work from the insitative capacity of the Japanese would have been equal to the emergency, but we had no models for tae more complex and difficult implements. Lowever, I concluded that an American could do anything that anybody else had ever done and I accepted the responsibility, though with many misgivings. A small wooden Laliding was put up and divided, one-half for a blacksmith shop and the other half for wood workers. I started in on plows. We h... to take the Japanese ingots of steel, the sime as they had made their oldswords from, and presumably the same as had been used to make the old Damascus blades. It is the best seel now made in the world. With these L. lo ingots these patient workers hammered away day after day as I had directed until f's first plowshare was finished. In the mean time the wood workers had made the learn and handles from the old oak in the Yeldo castie gate. When it had been put t rgether the plow had a very respectable appearance.

TRIAL OF THE FIRST PLOW. This experiment had excited a great deal of attention from the Japanese officials, and I had received notice that in a few days two or three cabinet officials would be present to see the plow work. At the appointed time they came, with a good deal of ceremony, and the plow was successfully tried. The astonishment and delight of the officials were very great. They invited me to a dinner and sent presents to the mechanics who had made the st foreign plow ever constructed in Japan, Our little shop gradually grew until it became quite a factory. We made everything used on a farm except mowing and threshing ma-chines. We even made thimble skein wagons, the thimble being cast at the foundry of the navy department. I had to guess at the width of the track, having forgotten the width of the track of our wagons. When finished they looked well and worked well, but I now know that they were four inches wider than even the old Illinois wide track wagons. Tue most difficult task was to make spring s.cel fork times and spring steel teeth for hay rakes, but we did both.

HEITEN HARNESS.

In the hurry of this work some oversights were bound to be made. One was in making harness. When all ready for that, we found that there was very little harness leather in Japan, and there was no time to import it. Wint was to be done was a very serious question. My mental resources were nearly exhauste. when I remembered having seen the negroes down south during the war plowing with rope harness. Acting upon that, I had made 200 sets of hemp harness, every piece in the same shape as in leather harness, and they answered a very useful purpose. There was not a piece of leather about them, as we used canvas for the collars. When I arrived on the ground selected for the farm I found that I had not done with the plow question. Some portions of the pasture were with chestnut bushes, and the ground was full of large roots, so much so that no ordinary plow could cut them. In order to prepare this ground for plowing, men were put to grubbing out these roots. At even the extremely low price at which labor is paid there I soon saw that to grub out these therefore had a plow made that could not be broken. It was made of wrought steel, cut a twenty-six inch furrow, and was strong enough to go through any obstacle. To this how we attached nine horses, three abreast, and with it we went through the chestnut bushes as though they had been rushes. When the horses were thoroughly broken and the plowmen had gained experience, one man could plow from three to three and one-half acres per day with this big plow, THE NATIVES ASTONISHED. Near to our operations were large old farm-ing districts with a numerous population. By the time our plows and harrows were successfully running the fame of the foreign farm had spread to these people, and they came flocking in, whole villages making journeys to see the wonderful foreign imple-ments work. With their mode of digging up ments work. With their mode of digging up the soil with a mattock an eighth of an acre is a good day's work for a man. When the farmers, who had never seen any other than mattock tillage, saw this great plow turning its twenty-six inch furrow at the rate of three acres per day, they held up their bands and crivit, "Wonderful!" Through the whole of the first year our labor saving machinery drew crowds of native farmers, some from a distance of more than 100 miles, and these journeys were mostly made on foot. A greater wonder than the plow, even, were the mowing machines. Some of the pasture divisions wers clear of brush, smooth as a divisions were clear of brush, smooth as a house floor, with fine grass for hay. A pair of Japanese ponies, with a fifty-four inch sickle bar mower, could easily cut from twelve to fifteen acress per day, while with a Japanese grass knife a quarter of an acre was a go xl day's work. The sight of these mowers cutting a swath fifty-four inches wide, as fast as houses could walk, took the breath away from these simple from these simple people. DANGEROUS CURIOSITY. How the machine did it was the mystery, as the sickle and har when work was being done was hidden in the grass. Their curiosity would lead them directly in front of the machine, in spite of the warnings of the driver, and it was found necessary to have a mounted attendant with each machine to save the limits of the curious. A corn sheller was a wother marvel, taking in the ears of corn and discharging the shelled corn at one open-ing and the cobs at another. But what struck Us in dumb was a self raking harvester. The e nstruction of that could be explained to their minds only on the grounds that the in-ventor was a wizard and dealt in the super-natural.—H. Latham in San Francisco Caronicle.

CONTROL OF THE EYES.

Something That Is Particularly Necessary in the City of New York.

sary in the City of New York. The greatest secret of enjoying existence in New York is that one must be absolutely the master of his own eyes. Hungry Joe, the arch confidence operator, used to say that he could distinguish a stranger by his hat or shoes. The idea that these betray men is so deep rooted that many strangers always buy New York hats and shoes as soon as they arrive, while others who expect to come often to town order these wearables from city shops. But you can get correct hats and shoes in any large city, and off styles in the Bowery.

But whatever one looks like he must control his eyes or life will be a perpetual torment to him. Our dudes and Anglomaniac society carry the thing too far. They go about forever looking over every one's head, or else staring with a dead and live glassy look, insulting alike to whomsoever they glance at and to their own intelligence. This they thisk "the grand air" and their admirers dub it aristocratic. A ward politician the other day said to me that the leader of a certain political faction was "gitting 'ristocratic." I asked him how he was showing this.

"Oh," said the heeler, "he has a tired look, and he don't seem to see you less he wanta." But by eye control I mean the seeing of everything without being seen to do so. This necessity is bred by the borde of street bandits that prey upon every man out of doors. Their number is legion and their ways are the ways of brigands. If a man lets his eyes fall on a boy who utters a peculiar street cry he is apt to have from two to six newsboys leap for him like so many human catapults. As he steps from a hotel, theatre, depot or club, if he allows his eyes to wander an instant he will be at once surrounded and hemmed in by cabmen, each seeking his custom, even by violence. If he turns his head to look at the mendicant who addresses him he may not be able to get rid of the fellow for a block. Resting the eye for an instant on a group of well dressed men (who may be interested in a "quiet game"), or on a boisterous drunkard or a voluble crank, may prove to have very annoying results. I was talking the other day to a lady whose receptions are very popular, and I remarked that people commented very curi-ously on the difference between her manner in doors and her carriage on the street. In doors she was all affability and unconscious

ease, and out of doors she was a poker. "It's all put on out of doors," she said; "it goes on with my bonnet and wrap. I was in endless trouble as long as I yielded to my in-clination to be natural and careless. Some adventures that I had were quite alarming, I can tell you. But now I am on my guard as long as I am out of doors .- Minneapolis Tri-

Elopers Sure Enough.

"There had been an account of an elopement in the morning papers," said the com-mercial traveler, "and I was thinking of it when a couple drove up to the country hotel and registered, 'Mr. and Mrs. So-and-So,' I winked at the boys and said: 'Here's for a joke.' The old hotel keeper was a very dear friend of mine and took my word for gospel truth, so when I said: 'Look out for 'em! I think I know 'em, and they are eloping and they are not married,' etc., you ought to have seen the old fellow. He scowled and lifted his chin, and wagged it up and down half a dozen time, sort of as though he was thinking it over, and then he walked off. All the other boys in the house were put on to the joke and we agreed to watch the old man and see what he did

"Supper rang, and the party of traveling men took seats at one table and left the new arrivals to the sole occupancy of another. The hotel proprietor, who helped serve at the table, took his station as much as possible be-hind the young couple, his eye all the time

watching their every movement, "'Will you have some sugar in your tea? at

FANNING THE HAMMER.

A QUICK WAY OF FILLING YOUR STORY OF THE DISCOVERY OF THE ENEMY WITH LEAD.

Hitting the Dead Center of an Opponent in Mortal Contest-Self Cockers and Single Acting Pistols-The "Fanning" Movement Explained.

Harry H. Whitehill, ex-sheriff of Grant county and formerly of New York city, was in Santa Fe during much of the legislative session just closed, and in conversation with a reporter he remarked:

"It's funny, but every tenderfoot thinks that all cowboys carry double acting, or, as some call them, self cocking revolvers. There was a time when those weapons were in high favor, but the cowboys soon found that they were positively unhandy, instead of being a help to a man in a harry. Now self cocking pistols are boycotted. I'll bet that four-fifths of the cowboys in this territory have gone back to the old style single acting pistol. Two years ago everybody had a double acting 'gun,' and wouldn't have any other."

"Why? Don't they like the new style?" "No. They discovered that, try as they would, they could not avoid deflecting the muzzle of the pistol to the right while pulling the trigger to raise the hammer. You see, all the power is applied from the right hand side of the trigger, where you put your finger in. Now, when you pull the trigger for the comparatively long period necessary to get the double acting hammer up to the point where the spring is released, and it falls, you insensibly put a heavy pressure on the right hand side, and can't help slightly swaying the muzzle in that direction. When the double acting guns were in style here we used to notice that five out of every six men who got abot were wounded in the left side. Of these, about one half were shot so far to the left that the ball simply grazed their ribs. Another large percentage were shot on the innerside of the left arm. HITTING THE DEAD CENTER.

"Now the cowboy prides himself on hitting the dead center of his opponent. It is always his wish to put the ball right at the juncture of the ribs above the stomach. This is not merely because they want to put on style; the placing of a forty-eight caliber ball right there prevents your man from 'coming back at you.' Now, as soon as the cowboy began to note this queer feature of the shooting, it became a matter of serious moment to them. They quickly found the fault to be in the self cocker, which, by deflecting their muzzles, of course inclined the balls toward the left side of the man facing them in front. That settled the self cocker. The fact that the cowboys were right is proven by the simultaneous disappearance of the new style pistol and the reappearance of the old style

"But can't one shoot faster with the new style weapon?" asked the tenderfoot. "Did you ever see a cowboy shoot?" asked

the ex-sheriff with a quizzical smile. "Why, see here, this is a single acting, old style pis-Watch that tree.

Before the words were well uttered the handsome sheriff had got the drop on the growing timber, and six shots rang out in such rapid succession that they sounded like the explosion of a small pack of very large firecrackers. During the shooting Mr. Whitehill's left forefinger vibrated along the top of the pistol barrel from muzzle to breech. The six balls entered the tree about three inches apart.

"Now, I carry my pistol fixed this way, and it's all ready for use," he continued, exhibit-ing the weapon. It was of 48 caliber, about eighteen inches long and handsomely mounted. The trigger was tied firmly back against the inner side of the guard with a rawhide

JOB MOSES' MILLIONS.

BRADFORD OIL FIELDS.

How a Rochester Pill Man Found Financial Success-Pushing the Drill in the Valley-Going 200 Feet Deeper. The Flood.

Job Moses was a country boy, born some-where up about Leroy, N. Y., who drifted into Rochester, while still in his teens, to make his fortune. In 1862 he had made it, and a big one, out of a patent pill that he or some one else had invented. About that time Oil Creek was in its glory, and the newspapers teemed with accounts of the fortunes to be made out of oil. The stories fired the imagination of the Rochester pill man, and he determined to try his hand at the new urce of wealth.

Up in the northern part of McKean county, the state, and the southern part of Cattarau-gus county, N. Y., lies a vailey which was then and is yet one of the wildest and most forsaken sections of country to be found east of the Mississippi. Turough this valley, then given up to lumbering, Charles Minot, who sed to conduct the Erie road sometimes for profit, but mostly for pleasure and glory, had for some reason built a branch road which ran through Bradford-which then boasted three houses, a blacksmith shop, a school use and a tavern-and terminated at the little lumber camp of Gilesville.

Job Moses looked over the field, studied the maps and finally made up his mind that the valley through which Minot's little railroad ran was underlaid with one vast sea of oil. As time passed on he became as certain as fate that his conclusions were right. One day he showed up in Bradford, leased some thousands of acres, and soon had a well under way. The simple minded ratives, who had thought him eccentric from the first, set him down as a lunatic when he told them that the earnings of the railroad which ran past their door would soon be increased twenty fold, and to this opinion they clung for many a long year.

PUSHING THE DRILL.

When Moses began pushing the drill in the valley many of the oil kings of to-day were unknown and unheard of, John D. Rockafeller, Oliver H. Payne and Bill Thompso had not yet matured their plans. Dan O'Day and H. L. Taylor would have looked upon \$1,000 as a fortune. Peter Grace and Capt. J. J. Vandergrift had not yet returned from the war. Col. Dyer was on a farm down in Maine. The Nobles, now the Standard Oil company of Russia, were making barrels in Pittsburg. Lem and Ike Willets were cutting logs up in Allegany county, and Charley Young was working for them at \$40 a month. The Fishers and Phillips had their fortunes to make, while Joe Craig was not yet out of the primer, and John McKeown was still dressing tools along the creek.

For twelve years Job Moses, with dogged resolution, sunk hole after hole in his leases, NO. 46, HIGH STREET BELLEFONTE. PA but with no show of oil. Then he woke up one morning to find that the thousands h had made out of pills in Rochester had van-ished into the holes he had been punching in the woods and fields about Bradford, and that he was a poor man. Disappointed, but not discouraged, he went to New York, and with an eloquence born of earnestness suc-ceeded in obtaining from the capitalists who gave him a hearing money with which to tinue his search. This was in 1875. Once back on his field of operations a new idea struck him. Up to that time he had drilled all of his wells only 900 feet deep, the horizon at which oil was found along the creek. Perhaps there might be a producing sand still further down. He sunk one of his wells 200 feet deeper, and was rewarded with thong. "All I have to do with it," explained the ex-peace guardian, "is to brush the hammer back as far as it will go with my left forefinger, been searching. Every well he sunk gave him rich returns. The news of his succes spread abroad and the tide of oildom turned slowly toward Brodford. A year later it had increased to a flood, and the fact was freely admitted that no such field had ever been struck before. Lands which two years before had been almost worthless sold for more than a prince's ransom. But Moses had it all un der lease and was able to make his own terms. His thirteen years of waiting nettedhim millions. He lives in New York now, enjoys life, and always has a spare \$50 to loan to any of the boys who happen to get broke in the metropolis .- Philadelphia Times.

GODEY'S, at the present time is admitted by press and people to be superior to any ladies' magazine in America, having the greatest variety of departments, ably edited.

The literary features are : Serials, Novelettes, Short Stories, Charades, Pomes, etc.

Among the popular suthers who will contribute to GODEY, are; J. V. Phich-are, Miss Emily Reed, John Churchill, William Miller Butler, Emily Lennox

Piutes Snowed Under.

A Nevada newspaper says that a citizen recently saw two Finte bucks dig a hole in a snow bank, get into it, and wrap thems snow bank, get into it, and wrap themselves in a single blanket, preparatory to a night's rest. In the morning he saw no signs of the ladians, but a mound of snow marked the spot where they went to bed. He was sure that they had frozen during the night, and prepared to dig out the bodies, but the first thrust of the shovel brought the bucks to their feet, with grunts of disgust. Instead of being frozen, they were moist with perspira-tion.--New York Sun.

gth said the young man to his comp as he passed the saccharine for her use. "'No, thank you; I never use sugar in my

tea,' was the sweet response.

"We were watching the old man as he stood near them and heard this answer. He grew about a foot in a second. 'He's got a clew,' said I to myself. And it was a clew such as would make the eye of a Pinkerton detective sparkle. The idea of a husband not knowing whether his wife used sugar in her tea or not The old man didn't linger long about coming to a decision. He leaned over and said: 'Young man, you leave the table. That woman is not your wedded wife.' "The couple never whimpered. They called for their team and drove on. The most sur-

prised party in the affair was ours. We hadn't dreamed that we were so near the truth. The next day the same pair were arrested in a neighboring town and carried back to their homes. If I should tell that landlord now that the Methodist minister that boards with him was Jesse James in disguise he would believe me."-Lewiston (Me.) Journal.

Teapot and Punch BowL

Teapet and Panch Bowl. Afternoon teas are filling up the remaining days of the season at Washington and the teapot and punch bowl still "draw," as theatrical people put it. A lackadaisical youth who was making eyes and saying soulful things in a languid way to a pretty assistant at a reception was handed a glass of punch to change the conversation. Tasting the compound, he rolled his eyes up, and said. "This punch is a symphony." He was only equaled by a Kanass man who was taken to one of Mrs. Cockrell's receptions, and being given her famous punch did not know whether it was a symphony or not. In fact, he did not know what the stuff was that he was drinking, as he was a rigid total abstimence man. He was shy as well, and seeing that every one else had a little glass cup of the harmles looking liquid he took one too. The poor man thought it was some kind of tea, and the bowl seemed more innocent to have the same spot for the same spot for Billy dropped, didd't it! That shows what a good man with a single acting pistol could do," "So you would fust as lieve put your single acting visit to new style" and the bowl seemed more innocent to him than a bottle. He remarked to a friend than a bottom it was very nice, but that he afterward that it was very nice, but that he believed that it made him feel very queerly. One hostess has introduced this winter the fashion so common in Paris of having hot punch. She is an original woman all around, though, and caps the climax by giving her hot punch at her Sunday evening receptions."Ruhamah" in Globe-Democrat.

Farmers in the Senate.

The remark is current that " Judge Reagan The remark is current that "Judge Reagan of Texas will be the only farmer in the sen-ate," but its propriety is most doubtful. There are numerous other senators who have farms. They do not work them personally, nor de-pend upon them for a living, nor yet derive any especial pecuniary profit from them. But then neither does Mr. Reagan. His wife runs the farm and says they lose money on it; for the soil is too sandy to raise any crops, and the sand is too poor to make into glass. -New York Tribures. York Tribune.

The Sewers and Catacombs.

The prefect of the Seine allows 800 excur-onists a day to visit the sewers and cata-ombs in aid of the sufferers from the floods in the south of France.

In Germany during a year are made 540, 000 real meerschnum pipes, 500,000 imitation meerschaums and 560,000,000 wooden pipes.

while I hold the pistol firmly with my right hand. My right forefinger never goes near the trigger, but helps to hold the stock, and this makes my grip more firm and certain. When I push back the hammer I have only to take my finger off to let it fall and dis charge the pistol. You see, the trigger, being tied back, the hammer is always free. One motion is all that is necessary to push back the hammer and fire the shot. The trick is called 'fanning the hammer.' You see, I pushed it back with my left forefinger; it instantly fell when I released it, and the next instant my finger was again pushing it back to a full cock. Doing this little act quickly makes your finger sway back and forth in a way not unlike the fanning motion. That's where it got its name."

QUICK ON TRIGGER.

"Do all cowboys adopt this plan!" "Oh, no. Most of them cock the pistol with the left forefinger, but some prefer to leave the trigger free and with each shot apply the slight pressure of the right forefinger neces-sary to discharge the weapon. There is no sure to speak of on the trigger, however, the aim is never spoiled. With a hair and the aim is never spoiled. trigger you have only to hold the gun straight

"So you would just as lieve put your single

acting pistol against the new style?" "Why, yes. When I tried to arrest a fellow in Grant one day, he came on me suddenly, and got the drop with a double acting pistol. But his ball went under my left arm without doing more than scratching. Of course I went back at him as quick as the Lord would let me, and got there. Now you see why I have a poor opinion of double act-ing pistols. That feilow never missed a man before, and if he had had his old gun I would have been dead now .- New York Sun.

The Freshmen's Flag.

Yale freshmen, anxious to have their class ag displayed on the stage of the New Haven fing displayed on the stage of the New Haven Opera house and thus excite the sophomores, tried to hire the manager of the performance to display it by buying 200 front seats. He refused. Then one of them engaged as a "supe," and when in the course of the per-formance a boat crossed the stage he man-aged to fasten the fing to the boat, and it was ible for some tan ruinutes, while pande-mium ruled in the auditorium as the fresh-m cheered and the sophomores hissed.— New York Sun.

English capitalists are considering a project for the building of a railroad through the picture-sque lake district from Windermere to Ambleside-a great resort for summer trav-

Getting Rid of a Bedfellow.

There will be an immense crowd assembled in this city on the occasion of the national encampment next September, and there will inquestionably be a large number of people crowded into a single room. For the benefit of such as may find themselves in unpleasant company, I will relate the measures I took to protect myself on the occasion of the Cali-fornia encampment. The notel was crowded, and I was obliged to share my bed with an unknown gentlemen from Petaluma. The clerk introduced us, and I soon perceived that the gentleman had not only looked upon the wine when it was red, but also drank I determined to have my full share of the bed, and in order to obtain this end, upon retiring I strapped a sharp spur to my heel. When my convivial badfellow rolled between the sheets I began to kick about as if sleeping restlesdy. The spur was brought into fre-quent contact with the cuticle of my friend, and must have produced severe laceration. He stood it nobly for some time, but finally arose, got into his clothes as well as he could. and made for the door. At the threshold he turned back and shook me by the shoulder to awaken me. "Sir," he said, "before I go away I want to tell you that if you were a gentleman you would cut your toe naila." -Globe-Democrat.

it.

Science and Sewer Gas.

While sewer gas is not said to have caused the diphiberia which carried off Gov, Deaver's little son, the examination of the executive nansion recently showed that the gas could reach the sleeping apartments. Essence of pepermint placed in one of the soil pipes was readily detected by the odor in the When the Princess Alice lost one of her chil-dren and then died of diptheria hersel/ there were loud complaints in England that the deaths were due to the lack of drainage of the deaths were due to the lack of drainage of the palace she occupied in her German home in Hesse Darmstadt. It was said that many deaths in royal or princely families were due to the had air of costly castles and palaces built in an age when sanitary science was un-known. Sanitary science in the hands of some persons who profess it is only a means of leading into houses the deadly gas which it ought to lead out.—Pittsburg Times.

Treasury Department Deaths. The records of the treasury department show that eleven persons on its pay roll have died since January of this year, a greater number than for a like period of any previous year. It is claimed that several of these deaths resulted from the bad sanitary condi-tion of the building.—Chicago Times

About the latest is a glass bottomed boat, used, according to a correspondent of The Inter Ocean, to gaze down upon the beautien of the bottom of the sea at Nassau.
