-Huckleberries have been so plenty in some of the Penns valley mountain districts that dealers buy them at five cents per quart. The berries are fine in quality. On this side of the county the crop is a fair one and pickers get a few cents more per quart. Blackberries, wild and cultivated, have also been plenty. the first named selling at 5 cents per quart from first hands, and the latter at 8 and 10 cents. Many poor families make good wages picking berries, the day's pick runnning from 15 to 60 quarts, according as patches are found in the mountains well laden with berries. We know of one person who picked 12 quarts of blackberries from the close of his day's work until a little before dark. What are called the late buckleberries, are about ready for the pickers; these grow on the high bushes, 12 to 24 inches in height, are less juicy than the low stalked early ones, but much sweeter, and have a much harder seed. In the Bear Meadows, in the mountains about two miles south of Boalsburg, huckleberries grow on small trees, 20 to 30 feet in height. These are the most delicious of all, are a size larger, slightly tartish, and are easily picked by bending to the ground the pliable stems that are well laden with berries. So far as we are able to learn, this is the only district, covering several hundred acres, in this country, where a superior quality of huckleberries grows on trees.
