

BEAUTY SPOTS.

A few waving locks about the forehead, temple and ears are becoming a thin face.

If you will apply a little pure white vaseline to your eyelashes every night it will aid their growth and strengthen them.

Don't become too stout. Although plumpness of contour is by no means unbecoming, corpulence is a thing to be avoided.

Onion sandwiches are said to clarify the complexion. The onions must be sliced very fine and salted, then placed between thin slices of bread and butter.

The arrangement of a woman's hair will either enhance or mar her appearance. The wise woman will wear her hair in the style that proves becoming, whether it be fashionable or not.

Don't think that because you are forty and fair you also should be fat and that nature has laid down a law that women shall accumulate layers with years, like a magnolia or any other tree.

Don't wash your face in cold water if you have been weeping. It only makes a bad matter worse. Instead bathe with rosewater and then put a soft cloth saturated with rosewater over the eyes.

Before a Girl Promises.

Whole hearted affection is, in the majority of cases, absolutely essential to married happiness, but it must be combined beforehand with practical common sense, which will enable a girl to gain a clear insight into the character of the man she proposes to marry.

To Avoid Nervousness.

Dr. H. T. Patrick says: "If you wish never to be nervous live with reason, have a purpose in life and work for it; play joyously, strive not for the unattainable, never regret the unalterable, be not annoyed at trifles, aim to attain neither great knowledge nor great riches, but unlimited common sense; be not self centered, but love the good and try neighbor as thyself.

The Linen Closet.

Every housewife takes or should take a lively interest in her household linen, and, unlike her sisters of old, she is not obliged to spin her bedclothes with her own fair hands.

To Make Beds.

The greatest attention is given in hospitals to the proper making of beds. The nurses sometimes spend months chiefly in learning to make a bed.

Women and Advertisers.

How important advertising has become is suggested by the observation of a smart man that there are but two great editors in the country—"one is the American woman and the other is the American advertiser."

Room Lights.

The difference between gas and oil lamps in the matter of vitiating the air of a room is significantly indicated in the fact that florists use lamps in their greenhouses, gas never.

An Animal Story For Little Folks Mary and Her Little Lamb

You have all heard of Mary, haven't you? I mean the Mary that had the little lamb. Of course you have, and I am going to tell you a story about her and her lamb that you have never heard before.

Well, once upon a time Mary thought that she would go into the fields and catch some of the beautiful butterflies that were flitting about from flower to flower. She had a net that her big brother had made for her, and with this she tried to capture the pretty creatures that sailed about in the air among the flowers.

But, mercy me, they were all so shy they never allowed her to get within reach of them. "I do believe that bad lamb is frightening the butterflies away!" cried

RAN AWAY AS FAST AS HE COULD.

Mary, stamping her pretty little foot on the ground. "I shall just punish him severely for it."

But the lamb saw that she was angry and ran away as fast as he could, with Mary right at his heels.

You would never have thought that a little girl could run so fast, and it was unfortunate for her that she did, for suddenly the lamb came to a pool of water, and he stopped right still as suddenly as he could.

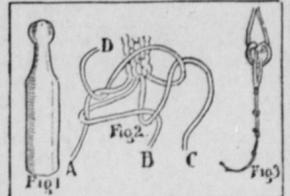

What happened to Mary? She went heels over head over the top of the lamb and plunged up to her waist in

the pool of water. Of course she got wet to the skin. "But it taught me a lesson," she said the next day. "I shouldn't have wanted to punish that dear little lamb of mine." And she gave him a real tight hug and made up.—Pittsburg Dispatch.

If any little boy would like to have a real cowboy whip he need only follow the instructions given herewith, and he will have his whip:

Fig. 2 of the diagram shows the proper way to braid a whip. To make the drawing simple only four strands are used, but by exactly the same method any number of strands from three to fifty may be braided.

It will, however, be better to experiment with four strands until the principle of the work is understood. Take four strands of equal length and knot them together at one end. Separate one of the strands from the rest. We will suppose that it corresponds to A in the diagram. Separate a second string from the rest and lay it across the string A. The second string will correspond to B. Lay a third string across the string B. The third string corresponds to C. Lay the fourth string

HOW TO MAKE THE WHIP. across C, and then run it under the string A. The fourth string corresponds to D. Pull all the strings tight and repeat the process.

It makes no difference how many strings there are in the braid. Lay them in turn one across the other, and then tuck the last one under the first one. A little experimenting will enable any one to understand how the braiding is done. To make the lash gradually diminish begin with a large number of strands and as the whip lengths gradually cut them away until only three are left. Make a loop at the end of the whip and attach a snapper, as shown in Fig. 3.

Fig. 1 shows the handle of the whip, which should not be more than a foot long. Tie or loop the whip around the neck of the handle. A whip braided as described may be perfectly controlled by the hand and will snap like the crack of a pistol.
