

## Growing Seeds for Market Good Seeds Are Half the Battle

GUY ELLIOTT MITCHELL

One of the most thriving businesses m the United States today and which seemingly carries on its work regardless of the fluctuations of stocks on the great exchanges, is the growing and selling of seeds. From small beginnings in the colonial period this business has grown so that now its value in measured by the tens of millions. The first beginning of the seed business commenced in small shops where a few boxes of seed shared a corner with codfish or a shelf with calicoes or books. To-day it has come to claim for itself immense warehouses and business establishments, having interests which extend to every portion of the globe.

The Pilgrims probably were the first introducers of seeds into this country, for they brought with them seeds of the plants cultivated by them in their n the United States today and which

English and Dutch homes. These of course were of such plants as were considered necessaries of life—corn barley and peas, while fruit trees

were also set out. Early records show that in 1763, Nathaniel Bird, a book-dealer of New-Nathaniel Bird, a book-dealer of Newport, R. I., advertised garden seeds just arrived from London. The following year an announcement was made by Gideon Welles that he had some choice Connecticut onion seeds for sale. In New York city hemp and flax seeds were advertised for sale as early as 1765. Boston, however, being the commercial center in the early days, was the chief city for the sale of garden seeds. In 1767 out of twenty-six advertisers in the Boston Gazette, six were dealers in seeds. Dur-

A Few Pumpkins For Seed

Since the days of tradition a great deal of attention has been paid to seed testing for quality of germina-tion. Seeds have been floated or have seedman's agent, is a text-book of horticulture. Millions of these books find their way into rural homes and become the basis by which the amateur gardener derives a knowledge of varieties and even methods of growing plants under varied conditions.

Seed Growing a Big Industry.

The seed trade has changed quite as much as has the catalogue, first with its woodcut engravings, to excellent seed laboratory where studies seed laboratory where studies seed laboratory where studies seed laboratory where studies slip by, wait in vain for the young plants to appear, or secure only a half stand.

THE WOODMAN'S STRIDE.

With a Long Swinging Step, He Covers Much Ground and Preserves a Perfect Balance.

grown in this country for at least fifty years. The amount raised, even at the present time, is not sufficient to meet the trade and the greater part of the flower-seed sold is imported from Europe.

Importance of Seed Testing.

Since the days of tradition a-great deal of attention has been paid to seed testing for quality of germination. Seeds have been floated or have

motion, his hips swaying an inch or more to the stepping side, and his pace is correspondingly long. His hip ac-tion may be noticed to an exaggerated degree in the stride of a professional pedestrian, but the latter walks with a heel-and-toe step, whereas an Indian's or sailor's step is more nearly flatfooted. In the latter case the center of gravity is covered by the whole foot. The poise is as secure as that of a rope walker. The toes are pointed straight forward, or even a trifle inward, so that the inside of the heel, the outside of the ball of the foot, and the smaller toes all do their share of work and assist in baltheir share of work and assist in bal-ancing. Walking in the woods in this manner, one is not so likely to trip over projecting roots, stones and other traps as he would be if the feet formed hooks by pointing outward. The ad-vantage is obvious in snowshoeing. If the Indian were turned to stone while in the act of stepping, the statue would probably stand balanced on one foot. His gait gives the limbs great control His gait gives the limbs great control over his movements. He is always poised. If a stick cracks under him it is because of his weight, and not by reason of the impact. He goes silently on, and with great economy of force. His steady balance enables him to put his foot down as gently as you would lay an egg on the table.

American Cheese Production.

Twenty years ago the cheese supply of Great Britain was largely furnished by the United States, but to-day Canada has taken the lead and far outstripped us as an exporter of this commentary. In 1880, the United States modity. In 1880 the United States sent 131.208,776 pounds of cheese to Great Britain, while in 1904 only 25,180,960 pounds were shipped to that 25,180,960 pounds were shipped to that country. Canada, on the other hand, exported over 31,000,000 pounds twenty-five years ago as against 212,862,322 pounds last year. This loss of trade, however, has not been injurious, but on the other hand, is caused through an excess of consumption at home over production, while reverse conditions. prevail with our Canadian neighbor.

Canada was thus forced to seek the
British markets for her plethora and
to fill up the place left vacant in that market by the withdrawal of the Unit-ed States therefrom.

While the United States, 1900, manufactured nearly 282,000,000 pounds of cheese, the per capita factory production was only 3.7 pounds, whereas, on the other hand, in 1901. A CLOVER SEED STORE-HOUSE.
both with regard to their germinative quality and their trueness to name.
There is great opportunity for adulteration, and many farmers are apt to consider they are saving money if they can get seeds at a reduced rate, finding out when it is too late that they have been swindled with false varieties or that perhaps 50 per cent. of

Mulberry Fences.

There are but few fences in Jado well to carry on a little seed testing establishment of his own each stead, the leaves of which furnish food year, and this course is advocated by for silk worms. Nearly 200,000 acres

A CALIFORNIA ONION PATCH.

In 1784, David Landreth commenced operations in Philadelphia; Bernard M'Mahon, in that same city in 1800, while in 1805, Grant Thorburn began to sell seeds in New York. By 1830 the population had increased from about three million in 1790, to ten and a half millions. To meet the growing demand for vegetables and flowers, these ten and a half millions required more than three and a half times as many seeds as were used in

times as many seeds as were used in 1790. Dealers established themselves in the principal cities and crossed the mountains.

Along with the reaching out for trade came the increasing size and prominence of the catalogue. The earliest seed catalogues were mere lists not intended for general distribution. Thorburn probably issued the first seed catalogue as early as 1823. Shortly after the civil war the catalogue became more prominent. Its size was increased and a few illustrations appeared. Novelties were not as numerous twenty years ago as they are today; they were not given so much attention either. Today there is not an important catalogue but gives considerable space to novelties. Seedsmen are on the alert for novelties; they are the money makers. The modern catalogue, with its profusely fillustrated pages while in a sense the Firms with any reputation behind Cane Preferred to Revolver by

Detectives.

"President Roosevelt's epigramseeds, and it a be of of seed is tested and found to be defective in germinative qualities, the seedsmen will probably stand ready to supply a good article in its place. The fault, in fact, may not be the seedman's. Although the seed dealers attempt to convey the idea that they raise their own seeds on their own farms, such a practice is manifestly impossible where vast supplies of seeds are furnished. They raise some of the seeds, but large quantities are contracted for by them with other growers and farmers, and there is always a chance of the seeds, but large quantities are contracted for by them with other growers and farmers, and there is always a chance of the seeds men themselves being imposed upon.

So that it is well for the individual grower to test each batch of farm of garden seeds which he expects to plant. The test which he can make will show him nothing regarding varieties; he may be getting a common cabbage instead of some high-priced at the end of the year; but the government experiments along this line are effectually holding the more irresponsible seedsmen in line, and the farmer himself can check up with his seedsmen on the question of germination.

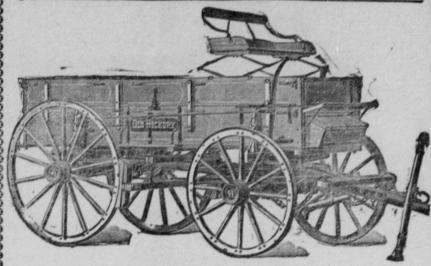

Seeds Germinate Quickly.

Most seeds will germinate in from three to ten days. The apparatus required is very simple—a pan, some cotion flannel or cotton batting, a little 'Speak softly and carry a big stick', has been quoted all over the world',
