LARGEST BATTLESHIP,

TEN MILLION DOLLARS FOR THE CONSTRUCTION OF GIGANTIC "CONSTITUTION."

More Destructive and Terrible than the new Floating Giant, the English "Dreadnaught"-Old "Constitution to be Saved.

One hundred thousand dollars for the preservation of the old frigate Constitution, and \$10,000,000 for the construction of a huge new battleship

The new Constitution is to be the most powerful ship of war afloat. She will excel the British Dreadnaught will recently launched by King Edward by as much as the Dreadnaught will excel anything afloat when she is com-

pleted. Her authorization may be said to be directly the result of Togo's victory in the Sea of Japan. It was where in the neighborhood of \$3,500, the British naval attache on board Togo's flagship who hurried home after that battle and warned the Ad-miralty of the needs of the Britishnavy, and this brought about the construction of the Dreadnaught. Now we are to follow and eclipse the British naval wonder.

The Navy Department has secured full information concerning the plans of the Dreadnaught, and the arrangement of her powerful armament, so that it is known exactly what umst be done to beat her.

In order that the department may not be Limpered in any way in determining upon the plans of the new Constitution the forthcoming bill will provide that the Secretary of the Navy may use the contingent fund to secure information from ship-builders the world over, if he so desires, before finally accepting the design of the tenmillion-dollar pacifier.

Provisions for Ship, This provision for the new American sea fighter is in line with the desire of the President and the earnest, recommendation of Admiral Dewey, who recently appeared before the Naval Committee of the House and gave a spirited talk in support of his views as to the necessity of constructing larger and more powerful battleships for the American Navy At the time the naval estimates were made up last fall, Secretary Bonaparte was opposed to any such increase, but he has since come around to the side of the President, and is now heartily in favor of the committee proposition. The naval experts in Washington have long been convinced that, the 16,000-ton battle ships Michigan and South Carolina, authorized by the last Congress, represent the limit of possi-

necessary to develop high speed, or the greater bunker capacity essential to wider steaming radius. They point out that in the Dreadnaught it was attempted to preserve two of these factors, gun power and speed, but that to do so it was necessary to sacrifice the armor protection, which they believe such a battleship should have.

No Limit to Cost. No sacrifice in armament, speed, or steaming radius will have to be made designing the new Constitution.

The only limitation placed upon the Secretary of the Navy by the Naval Affairs Committee is that her hull and machinery shall not cost more than The provision for the bat-\$6.000.000. tleships Michigan and South Carolina, now the largest ships building for the navy, was \$4,000,000 each, and there is no doubt in the minds of the members of the committee that if the Secretary decides to go to 20,000 tons or beyond, the extra \$2,000,000 now

provided will easily accomplish it. It is estimated that the armor and armament for the ship will cost some 000 in addition to the hull and machinery, and that other fittings will bring the total for the new Constitution up approximately to \$10,000,000. The Dreadnaught is planned to carry ten 12-inch rifles. The Michigan and South Carolina are to carry eight 12-inch guns. The Dreadnaught will be able to concentrate six guns for bow or stern fire, with eight on either broadside, while the American

ships can use four guns dead ahead or dead astern, and all eight ahead or astern on a quartering fire, with all eight on either broadside. So that in point of fire they are nearly as efficient as the Dreadnaught, which ex-

cels materially only in the single point of speed. To counterbalance this the American ships have the de cided advantage in armor protection. The Advantage of Guns.

The Constitution will have as high speed as the Dreadnaught, and the louble advantage over the British hip of greater gun power and more complete armor protection. She will be more able to inflict blows and better able to, withstand them. She will carry twelve 12-inch rifles, so arranged that she can concentrate eight of them in firing dead ahead or dead astern, or off the bow or quarter, and ten on either broadside.

Chaving Gum vs. Missons.

The twenty-seventh annual meeting of the Women's Foreign Missionary Society of the Presbytery of Washingon, held recently, disclosed the fact that three and a half million dollars a year more is spent for chewing gum than for foreign missions. In other words \$11,000,000 is spent for gum

and only \$7,500,000 for missions. stally compiled data show that \$17,5000,000 a year goes for candy, bility on a displacement not decidedly \$700,000,000 for jewels, and tobacco

Planned the Buildings Personally. The St. Louis and St. John schools at Pawhuska, both founded by Mother Katherine a number of years ago, are good examples of the work she is doing for the education of the Indians. Both have handsome and commodious buildings, planned personally by Mother Katherine, and have given hundreds of Osage children their first knowledge of the white man's learning. Many of the teachers are themselves Indians, graduates of these or similar schools, who have entered with enthusiasm into the education of their fellow tribesmen. The Osage schools receive some assistance from the government, and their scope is greatly widened by the orders now in effect from the agent's office that every Osage child of school age must be in school in order to draw its share at the annuity payments.

Used Indian Labor.

While Mother Katherine's benefactions have always been liberal, it is her plan to let the Indians do the work whenever possible, in the construction of buildings and work of a similar character. When the Sacred Heart school burned five years ago, and was rebuilt Pottawatomie and Kickapoo Indians made the brick for the new structure, and did much of the work towards its construction, working, of course, under the direction of a white of New Yorkers or Parisians in the contractor. Much of the maintenance of this school, which is claimed to be the oldest west of the Mississippi river, was by her visits to this school that trust as to be entertained by her is borne by Mother Katherine, and it she discovered Albert Negahnquet, the fullblood Pottawatomie boy educated by her, and who is now the only full-and Austin, Texas, and Oklahom blood Indian Catholic priest in the world. BERNHARDT OUTWITS TRUST.

Denied Playhouses by Theatre Combine, She Flays to Vast Audience in Tent.

Mme, Sarah Bernhardt, the celebrated actress has entered the arena as a "trust buster." When she made preparations for bookings in Texas, she found the playhouses of the state closed to her on account of her refusal to appear under the patronage of the theatre syndicate. In Texas, therefore, she was compelled to appear in a tent. A week or two ago, a novel method of producing a play was in-augurated at Dallas, when Sarah played "Camille" in a big circus tent, with an audience of 5,000 persons.

During the performance fully 10,000 persons crowded around the tent and would have paid to get in if it had been big enough. As it was the tent only seated 4,200 and 800 had to stand or sit on the ground. It was the most novel wild west show ever seen. The tent was a huge affair, and from the outside looked big enough to house a three-ringed circus.

The novelty of playing in a circus tent appealed to the actress and she gave her interpretation of the character of "Camille" as naturally, as cleverly, and with as much force and power as if confronted by an audience most modern of theatres. The thousands who greeted Mme. Bernhardt at Dallas desired as much to show their indorsement of her fight against the matchless talent as an actress.

Mme. Bernhardt made arrangen Wace City, Oklahoma Territory. In other
