

The editor of this department desires to keep in touch with the active members of Civic and Local Improvement Associations, and every one interested in the improvement, protection and upbuilding of rural village life.

What is being done in your town to encourage small industries and for home employment? What is doing along the line of street improvement and the beautifying of private lawns, roadways and public parks? Are your local merchants receiving the support of the local trade? Experience, plans, suggestions and photographs will be welcomed by editor of this department and so far as possible given place in these

#### The Local Handicap.

The Prophet is without honor in his own country. So the village and small town are without confidence in their own resources. We get so familiar with the things about us that we re apt to underrate their value. It is often necessary for a total stranger to come along and show us the neglected opportunities that have been under our

nose unseen for years. The writer while pursuing some industrial investigations had occasion to visit a thrifty little city in the Southwest. It is an old town that has literally been forced to the front by the pressure of development and northern energy. The place has five railroads, a population of 30,000 and a number of modern buildings. Still the natives

have not yet fully realized the solutions of many of the problems of change-they still are doubtful and modern city life ever attempted in this suspicious. About four years ago, be country. It is in line with the best fore the tide of immigration and capital set in toward the Southwest, a stranger from the North drifted into this particular city. He was just "looking around" with no special purpose in view. A curbstone real estate broker had on his list a tract of bottom. broker had on his list a tract of bottom land, timbered, but worthless on account of the annual floods. This land he had hawked about the street for 75c per acre, but found no takers among the home speculators. The tract was "no good." It was offered to this stranger for \$1.00 per acre. Would he look at it? Yes. He looked it over, examined every acre of it—came back to town and handed over \$10.000 for the worthless tract. Great count of the annual floods. This land \$10,000 for the worthless tract. Great from absence of doctors' bills and from was the joy of the natives who were lixed up at the various bars, to drink to the health of the "sucker." But the sucker returned in about a month with another capitalist from the North and sold this worthless tract for \$30,-000. But this was not all. Within ninety days the second sucker brought a third and sold him the timber alone for \$50,000. And then the local bankers and conservative capitalists. kicked themselves for not thinking of

finding money on every bush. The new-comers are simply developing the resources which the natives failed to recognize.

This principle holds true of a mafority of individuals in every community. We are too near to see the opportunities at our feet. We pass them over and leave them for someone to pick up.

The twentieth century for the United States at least will be a time of concentration rather than expansion. century of rural development and home-building. As has been indicated the people must get back to the land, industrial institutions to reach their best development must give the worker a chance for a home.

# The Value of a Good Garden.

Many people fail to realize the garden. Even an inferior one is much better than none. Vegetables are indispensable to a family, so far as health is concerned, to say nothing of the money saved by not having to buy so much flour and so many groceries.

It would seem that every man should manage to obtain a piece of ground and see that it becomes well fertilized and enriched and then put under a thorough state of cultivation before trying to plant the seeds. It only costs a little to buy enough seeds for quite a good-sized garden.

enterprises for solving the questions of

work and craftsmanship as a substitute for the street corner, the cheap a direct return in the way of commodities for use in the home or for

The founder and main supporter of the movement is Mr. George H. Maxwell, editor of Maxwell's Talisman and founder of the National Irrigation Movement. As a student of social conditions, Mr. Maxwell has concluded that college settlements and similar movements merely scratch the upper surface of the problem and fail utterly to get under it and crowd it out with Arkansas and Missouri—going west "Every child in a garden, every mother looking for opportunities. To-day in a homegraft and individual strangers are taking their places and dustrial independence for every worker

#### in a home of his own on the land." MEANING OF HOMECROFT.

The word "Homecroft" has been coined by Mr. Maxwell to fit the thing he has in mind. The Scotch word 'croft' means a very small piece of land farmed intensively by its occupant but not large enough to yield him a living and constitute him a farmer. The Homecrofter, therefore, under the conditions being developed, is a laboring man, clerk, skilled artisan or what not, who supplements his regular income by, and spends his spare time in, work on the land. His children may likewise be employed out of school hours and at other times when they would otherwise be on the street or forced into some one of the street trades to help maintain the home. For the children the advantages are obvious. Healthy exercise in the open air for a purpose, fresh vegetables and great value of a thrifty, well-kept) other products, and occupation, are substituted for spasmodie exercise under bad conditions, stale vegetables or none at all, and the gang.

> It can be demonstrated that the ordinary factory worker on from one -half acre to an acre of land can card actually more in the odd time given to his garden than he does from his regular work, taking it hour for hour. The other advantages are evident.

THE GILDHALL AND SHOPS. As a foundation for the Gild the Wilson estate at 143 Main St. Water-

verted into a Gildhall and shops for handleraft work. The land around the house has practically all been appropriated to the use of a garden school and laid out in children's gardens. The director of the gardens is Miss Elizabeth S. Hill of Groton, who last year conducted the school gardens in Brookline and Groton. Over a hundred children are already at work and many more, almost two hundred in all, have applied for space. It is an interesting sight, and a poor commentary on our public school system, to see the wistful look of the children "not in it" as they watch the fortunate ones and inquire of the instructors as to how long they will have to wait. Many children not connected with the school watch the workers and play on the grounds, so that it has become a children's center for the town. The opening of the garden school has

aroused an interest among other pri vate organizations in the neighborhood and the Women's Club of Watertown has established another garden school also under Miss Hill's supervision, as Is still another opened by the Women's Social Science Club of Newton, whose

the old Emerson Place has been pur chased and set aside as a garde school for boys and even men who de sire to do practical work. The plots in this garden are large enough to permit of practical experiments and to even supply quite a quantity of vegetables which each gardener is allowed to ap propriate to his own use. The only requirement is that each gardener pro vide his own tools and seed and pay sufficient attention to the instruction and to his work to keep his plot in fair condition and in harmony with the garden as a whole. There is in this garden plenty of space not taken and it offers a unique and valuable opportunity for any one desiring such work. The garden is supervised by a young man with practical experience in market gardening. WEAVE BEAUTIFUL THINGS.

The weaving department, the only handicraft department as yet de veloped in the Gild, is supervised by Miss J. A. Turner, formerly with the experiment station for the blind in Cambridge. Miss Turner, assisted by her sister, has several looms alread in working order and instruction ha been taken up. The aim of the wor in weaving, as it will be in other home craft work, is not to have a weav ing establishment for the production of goods, but to conduct a school in weaving and design where women in the community may learn to do work which may be carried on in their homes. This, as in the case of the croft work, will enable them to occupy spare time, which would be otherwise wasted or improperly spent, in congenial, healthy and remunerative em ployment. It is hoped and believed that such work will enable many women who have to supplement their income to do it in their homes and not be forced into factories and other unsatisfactory conditions. A system will be developed whereby looms will be supplied by and the product sold through the Gild. By this method expenses will be kept at a minimum and the highest profits accrue to the

#### HOME LANDS IN SMALL PARCELS.

The more far-reaching and substan-al feature of the movement is the acquisition and subdivision of land into small tracts for actual croft purpose as outlined above. This closeresembles the schemes developed in

Cadbury, from long observation and practical way to solve the problem was to take the factory worker out on the land where he might pursue the natural and healthy recreation of gardening. Says Mr. W. Alexander Harvey in his book on Bournville, "It was imspent their evenings in an institute, club room or public-house. age of their moral life that they should land. These plans are being prepared be brought into contact with nature. by Mr. Allen W. Jackson, the archi-

Something over fifty acres of land have already been purchased for subdivision, and improvement. This will be sold to workingmen for homes for pracically what it cost in large tracts, plus the cost of division and improvement. A special plan is to sell homes to industrious working men on a long time, on the monthly instalment plan, at a rate which will be no more than is usually paid in rent, but which will create a sinking fund that will pay the purchase price and in the mean time carry what will amount to an in surance policy covering the amount of the purchase price remaining due, so that if the purchaser should die the property would go to his family without further payment.

movement if it is to succeed. Here dustrious and ambitious new comers again the scheme resembles that of to their farms and smaller towns. Bournville. There, though practically Il the houses have been built by the nanagement, only forty-one and twoenths per cent. of the occupants work n the village. Eighteen and six-tenths er cent, work in villages within a nile and forty and two-tenths per cent. work in Birmingham. Fifty and seven-tenths per cent. of them are employed at indoor work in factories, thirteen and three-tenths per cent, are clerks and travellers, and thirty-six per cent, are skilled workers and professional men. By this arrangement a normal community life is main tained. The Homecroft Gild is being developed along the same lines.

#### OVERCOMING PHYSICAL DEGENERACY.

The Gild is not making the mistake of trying to make farmers pure and simple out of city workers. Such a hard and fast line between city and country will always lead to failure Mr. Maxwell says: "Give the city worker a home in the suburbs, where he can have a garden and a poultry yard, and where his children can have sunshine and fresh air without stint, and you have largely done away with the terrible evils that are cursing the denizens of the congested quarters of our great cities-physical degeneracy tuberculosis, and social, moral, and political dangers too numerous to be enumerated." Henry W. Grady described the antithesis when he said, 'The citizen standing in the doorway of his home-contented on this threshold-his family gathered about his hearthstone-while the evening of a well-spent day closes in scenes and sounds that are dearest-he shall save the republic when the drum tap is futile and the barracks are exhausted."

The Homecroft Gild has other plans immediate contemplation.

tables and is under one of the best To return to the Homecrofters Gild, water-rights in the region. Five-acre

what can be done in any community in the country. Japan, with sixty seven per cent, of her total population working in part or entirely on the land, has become a land of gardens where opeless poverty is almost unknown and where tuberculosis is a negligable quantity. America can take care of ts hopeless thousands in the same way, first by putting hope into them and then by putting them where they may attain it. It is to the promoters of our great industries that we must look for help in great part, but public sentiment and sympathy will move the promoters and reach the problem. The Homecrofters Gild promises a start which ought to weld together the country and the city into one indestructible whole and, supplemented by proper charity administration and sane vagrancy laws, remove entirely the possibility even of a "submerged

#### Parking for the Town. The town parks, or the town of village square are the lungs of its

If the town is growing, it is none too soon to start, a movement to provide for the securing of ample town parkng. The land is increasing; when the town has doubled and has become a small city, it will not be so easy to secure sites, readily accessible to the people, without paying an exorbitant price. Secure first the land; it is not important that a large amount of money should be at once expended its beautification, possibly it needs but little, since nature may have made it more beautiful than can man. It is not necessary that it should be transformed into carpet bids of flowers and trimly kept lawns. If it affords sunlight and a green relie of grass and trees for the eye, it becomes a civilizer and an equalizer, for the opor as well as the wealthy, a resting lace where a man may forget, for the time, some of his struggles and his anxieties in a contemplation of what God has made.

The park should be kept, in fact, as natural as is consistent with its use as such. It is never too early, however, to secure its site, with a view to the building up of the community, when land values will necessarily increase.

### Distribution of Immigrants the Solution.

If there were only some practicable way of distributing immigration more equally among all the ports of the country the congestion and segra-gation phases of this problem would be nearer solution. It can be accomplished in but a small degree, since it will only be done if answering an economic demand, as in the case of the Galveston-Bremen service. FOLLOWS SUCCESSFUL ENGLISH and well organized effort to induce The movement is not intended to be an isolated one as the shops and employment in the interior and by fagardens are open to any one who will forming them of opportunities elseuse them in the right way.
