

HE era of travel under the Hudson river has come at last. It means much to the country at large as well as New York city and its environs. Manhattan Island is now joined by underground railways with Long Island on the east and the New Jersey shore on the west. Distance is annihilated. Electric trains can whiz through the tubes laid under the waters over which great steamthips ply, and whether the waves run high and the storms rage or fogs endanger navigation it is all the same to the tunnel traveler. One hundred feet beneath the surface of the rushing waters the elements can no longer interfere with the schedules of transporta-

Recognizing the general public interest that would be taken in the opening of the twin tubes from Hoboken to New York on Feb. 25, the officials of the Hudson and Manhattan Railroad company decided to invite President Roosevelt to press the electric button which should furnish the impulse for the starting of the first trains, and they planned by way of further signalizing the event a dramatic meeting between the governors of New York and New Jersey under the bed of the noble Hudson and midway between the opposite shores. Thus the honor of officially declaring the tunnel open fell to these two executives, Charles E. Hughes, representing the Empire State, and Franklin Fort, representing New

The so called McAdoo tunnels pierce the earth beneath the North river to the south of the tunnels which are being bored by the Pennsylvania railroad. The part of the McAdoo route now complete consists of a twin tube tunnel extending from Hoboken to Sixth avenue and Nineteenth street, New York, a distance of nearly three miles. This section of the tunnel system is generally spoken of as the Morton street or uptown tubes. The downtown tubes run from Jersey City to the great terminal station at Cortland and Fulton streets, Manhattan borough. The south or downtown tubes will be completed some time during the coming summer. On the New Jerley side between the terminal at Hoboken and that at Jersey City a transverse tunnel has been constructed. It taps all the trunk and local transportation lines on the Jersey shore and serves as a feeder to the underriver tubes. Passengers on any of the roads. whose stations on the Jersey shore are in proximity to the transverse tunnel may reach New York by the underground route now in readiness. At present they can only go to uptown New York by the McAdoo system, but six months or so hence they will be able to travel under the river to the downtown section also. Besides the routes described, the McAdoo system of railways underground and under river includes a branch running from Jersey City to Newark and a spur running from Sixth avenue, New York, under Ninth street to Astor place, connecting with the Interborough company's subway at that station. The Newark branch is partly underground and partly above the surface. The entire system embraces about eighteen

NOTED IN TWO FIELDS.

8. Weir Mitchell, Author and Physician, and His Ideas.

A new story by Dr. Weir Mitchell, entitled "The Red City," has just begun running as a serial in the Century Magazine. It is a romance of the second administration of President Washington, and the first installments describe the experiences in America of a young Frenchman who flees hither after the murder of his father during the French revolution by a Jacobin mob.

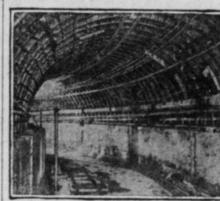

DR. S. WEIR MITCHELL.

Dr. Mitchell was born seventy-eight years ago on the 15th of February, but is by no means past bis usefulness. One of the things he has done in his old age is to furnish aid and encouragement to the new movement combining medical science and Christian faith in the treatment of bodily ills. Indeed, at Emmanuel Episcopal church, Boston, where it originated, the rector a few Sundays ago made an address in which he credited Dr. Mitchell with being the inspiration of the movement. The venerable author was sit-

miles of underriver and underground railways. Five minutes is all the time necessary for the trip under the Hudson, and the trip from Hoboken to the station at Sixth avenue and Nineteenth street, in the heart of upper Manhattan, may be made in less than ten min-

In equipping the new road under the Hudson with facilities for transportation the latest devices for comfort, convenlence and safety have been employed. The cars are of steel, absolutely fireproof, and both tunnel and cars are brilliantly lighted. The stations are built of concrete and metal so as to preclude the possibility of fire in their case; also commestion and crowding have been avoided as far as possible by providing the cars with entrances both, at the ends and in the middle and by arranging the platforms at stations so that passengers enter on one side of the car and leave at the other. In the tubes under the river the atmosphere will be preserved fresh and cool by the system of ventilation adopt-

ENTRANCE TO TUNNEL FROM NEW YORK SIDE

ed. Each train as it proceeds acts as a piston, forcing the air ahead of it and drawing it more as it moves on. Apparatus for artificial ventilation has been installed for use in emergencies like the blowing out of a fuse to clear the tunnel quickly of smoke.

At the downtown terminus of the tunnel a great structure known as the Hudson Terminal building is almost completed, and beneath it trains coming into lower New York from Jersey City will discharge their passengers. There are two sections of the building, Dey street running between them, and be the largest office building in the world, with thirty-nine fast running elevators, all sorts of conveniences for the public and offices providing room

for 10,000 people, a small city in itself. Looking into the tunnel now open to uptown New York one sees extending out under the river from the vaulted archways of the station itself two brilliantly lighted tubes dwindling as they vanish in perspective until they resemble most the points of polished needles. Though the effect is subterranean, it is not unpleasant, and an impression of mystery is given, which may well be inspired by the sight of a completed work of engineering which has involved an expenditure of \$70,-000,000 and the employment of capital and brains on a scale never before witnessed in the execution of such an en-

ting at the time in one of the pews of this church-"the clearing house for I have but one life to give for my sorrows," as they call it in Boston. The rector, Rev. Dr. Elwood Worcester, acknowledged that he had obtained from Dr. Mitchell many of the ideas which he and his associate have put in practice in Boston and which have now extended to other cities, for besides being a noted author Dr. Mitchell is eminent as a physician

and especially as a neurologist. Though an authority on how to treat other people's nervous troubles, his own nerves once got the best of him. He was in Austria at the time, and he consulted the most eminent nerve specialist in Vienna. The foreign physician noted that he was an American and asked from what city he came. Learning that Dr. Mitchell lived in Philadelphia, he exclaimed, "You come to Vienna to be cured of a nerve trouble when you live in Philadel-

"Why not?" asked the physician-au-

"Because," was the reply, "you have in Philadelphia the greatest and most famous nerve specialist in the world, Dr. S. Weir Mitchell."

His Description. In the English club at Hongkong a white haired old gentleman who, had come down from some northern port was seated at dinner when he suddenly became very excited. He had been brought a letter by a solemn faced Chinese butler, and he saw something on the outside of this letter which sent him downstairs two steps at a time to Interview the hall porter. When he came back he told us what was the matter. The hall porter had inscribed on the envelope in Chinese for the information of the butler:

"This is for the old baboon with white fur." Unfortunately for the hall porter, the old gentleman was a first class scholar the Chinese language.-London

DIFFERENT IDEAS OF A HERO

Nathan Hale as Portrayed by Two

Noted American Sculptors. A short time ago a committee of Yale alumni assembled in the studio of William Ordway Partridge in New York to see the newly completed statue of Nathan Hale by that sculptor which the alumni of the institution propose to offer for the campus of the university. The patriot spy is the chief hero

STATUE OF NATHAN HALE BY MACMONNIES of the famous institution of learning at New Haven. He had the diploma of his alma mater with him on that fateful journey within the enemy's lines on Long Island which ended in his capture by the British and his execution under a warrant by General Howe on Sept. 22, 1776. Near the

STATUE OF NATHAN HALE BY PARTRIDGE. ie of his execution, 67 City man park, New York, a statue of Hale by Frederick MacMonnies now stands. Upon the pedestal are engraved the immortal words spoken by him as the hangman's noose was about to be adjusted to his neck, "I only regret that country."

Yale men have long felt that there should be a statue upon the college

Do You Open Your Mouth

Like a young bird and gulp down whatever food or medicine may be offered you? Or, do you want to know something of the mposition and character of that which you take into your stomach whether as food or medicine?

Most intelligent and sensible people now-a-days insist on knowing what they employ whether as food or as medicine. Dr. Pierce believes they have a perfect right to insist upon such knowledge. So he publishes, broadcast and on each bottle-wrapper, what his medicines are made of and verifies in order east. This he feels he can well afford to do because the more the ingredients of which his medicines are made are studied and understood the ore will their superior curative virtues

are made are studied and understood the more will their superior curative virtues be appreciated.

For the cure of woman's peculiar weaknesses, irregularities and derangements, giving rise to frequent headaches, backache, dragging-down pain or distress in lower abdominal or pelvic region, accompanied, ofttimes, with a debilitating, pelvic, catarrhal drain and kindred symptoms of weakness, Dr. Pierce's Favorite Prescription is a most efficient remedy. It is equally effective in curing painful periods, in giving strength to nursing mothers and in preparing the system of the expectant mother for baby's coming, thus rendering childbirth safe and comparatively painless. The "Favorite Prescription" is a most potent, strengthening tonic to the general system and to the organs distinctly feminine in particular. It is also a soothing and invigorating nervine and cures nervous exhaustion, nervous prostration, neuralgia, hysteria, spasms, chorea or St. Vitus's dance, and other distressing nervous symptoms attendant upon functional and organic diseases of the distinctly feminine organs.

A host of medical authorities of all the several schools of practice, recommend each of the several ingredients of which "Favorite Prescription" is made for the cure of the diseases for which it is claimed to be a cure. You may read what they say for yourself by sending a postal card request for a free booklet of extracts from the leading authorities, to Dr. R. V. Pierce, Invalids' Hotel and Surgical Institute, Buffalo, N. Y., and it will come to you by return post.

movement resulting in the execution of this work. Mr. Partridge has studied the subject for ten years and has written a book about the character of Hale and the story of his great sacrifice for country. His statue presents an interesting contrast to that of Mac-Monnies. Neither had any portrait of Hale upon which to work, for none exists. They had to be guided by the descriptions of the hero which have been handed down and by their own conceptions of his appearance and expression. Each statue has its special admirers. Hale was twenty-one at the time of his cruel death. Perhaps he seems more boyish in the statue by MacMonnies. Partridge has succeeded EXECUTORS NOTICE. well in expressing in the features of his Hale the patriotic fervor of the young enthusiast in the cause of the new nation and his athletic qualities. The hero was about six feet tall and could put his hand on a fence as high as his head and clear it with a bound.
