How to Keep Ice.

A very simple but little known method of keeping ice is to draw a piece of thick flannel tightly over some deep vessel, like a bowl, for instance, and fasten there. The ice is placed on top of this drumhead and covered loosely by another piece of flannel. This method serves particularly well in a sick room as a small piece can be kept near the patient all night. To break the ice a sharp needle is the best thing. By forcing it into the ice a division is easily made.

Some women are so very particular that they would like to demand a receipt when they pay a call.
