Yarnel scribe, keep your coat on; you are not in it. Never play Yankee, in answering a question by asking three or four more. I will answer yours first. You said you would like to know why the poor brother didn't pray when the minister called him to pray. It is easy. When the minister comes you kill the fatted hen, and take up a collection for him, and perhaps you turn a cold shoulder to your brother and ask him to pray for you. I am a moral man myself, but I say he did right. Let the minister that eats the chicken do the praying for you. Your other question in regard to the lady that set the hen in the morning and took the hen and chicks off in the evening. That is correct but it took 21 morning to hatch them. When you find a cuckoo nest I will buy the eggs.

FILLMORE.

Farmers are busy plowing to get their spring seeding done.

Hello Rock Forge, I would like to see that new parlor suit you purchased several weeks ago. Will it be all right if I come over some evening and call? I would be delighted to do so.

What do you think of a fellow who went one night last week with his wife and son to a neighbor for a pair of pigs, and when they were going home one of the pigs got out of the rig and started to run, and the man after it. He captured the pig and his watch was gone. He supposed he had lost it when chasing the pig. He took his lantern and walked about a mile to get his brother to go along to look for the watch. When he got there he discovered his watch was still hanging to the inside of his trousers, safe as ever.

Last Sunday night there were five young fellows from State College came to our town to attend meeting, and tried to take some of our girls in and couldn't. They all got in one buggy and began to sing songs and sing guard the girls. If the young fellows had acted like gentlemen they would have gone along quietly. We think the girls had good sense in not associating with them.

Your Soil Is Alive

O all intents and purposes, soil is alive. It breathes, works, rests; it drinks, and, most important of all, it feeds. It responds to good or bad treatment. It pays its debts with interest many times compounded. Being alive, to work it must be fed. During the non-growing seasons certain chemical changes take place which make the fertility in the soil available for next season's crop. But this process adds no plant food to the soil. Unless plant food is added to soil on which crops are grown, in time it starves. There is one best way to feed your soil. Stable manure, which contains all the essentials of plant life, should be spread evenly and in the proper quantity with an

I H C Manure Spreader

I H C manure spreaders are made in all styles and sizes. There are low machines which are not too low, but can be used in mud and deep snow, or in sloppy barnyards. They are made with either endless or reverse aprons. Frames are made of steel, braced and trussed like a steel bridge. Sizes run from small, narrow machines to machines of large capacity. The rear axle is placed well under the box, where it carries over 70 per cent of the load, insuring plenty of tractive power. Beaters are of large diameter to prevent winding. The teeth are square and chisel-pointed. The apron drive controls the load, insuring even spreading whether the machine is working up or down hill, or on the level. I H C spreaders have a rear axle differential, enabling them to spread evenly when turning corners.
I H C local dealers handling these machines will show you all their good points. Get literature and full information from them, or write
