Farming More Important Than Court.
Putting in the crops is more important now than the settlement of suits, announced District Judge W. S. Langmade, of Kansas, last week, when he discharged the jury in his court and told the members to go back to their spring planting. "We need more good farmers and good farming," the judge said. "And we need fewer lawsuits. None of the cases on the docket really is important. The planting cannot wait. The suits can."

Must Go Before Smelling Committee.
Employees of the Pennsylvania railroad are to be tested hereafter more carefully as to their sobriety. The latest rules in force are that after a man has "signed up" on all the latest traffic rules his breath is to be smelled by the examiner to detect any trace of liquor or it before he is given a train.

What Three Bushels More to the Acre Means

EIGHT years ago the farmers in a central state averaged crops that ran three bushels less to the acre than they now get. Suppose each acre of farm land in the country were so tended that it produced an increase equal to that of this state. How much more money would you have with which to buy the luxuries of life that you earn and deserve? Your share in this prosperity depends entirely upon yourself. The first step is to fertilize your land properly with manure spread by an

I H C Manure Spreader

The spreader that does its work as it should must have many excellent mechanical features. The apron should move without jerking; the beater should meet the load at exactly the right point to pulverize the manure without too greatly increasing the draft of the machine; the speed changes of the apron should be positive. All these features are provided for in the construction of I H C spreaders.

I H C spreaders are made in low styles which are not too low for use in deep mud or snow, narrow and wide, with both reverse and endless aprons, for use under all conditions. The rear axle is located well under the box, instead of at the rear. Placed in that position (under the box) it carries over 70 per cent of the load and insures ample tractive power.
