

WIRING QUIZ

What's the young lady in the picture doing? She's resetting the switch on a circuit breaker panel to restore service after some disturbance. She flips a switch and on go the lights again. These panels are used in many modern home wiring systems.

Demonstration Home To Open Saturday

(Continued from Page 1) hardwood and the walls are of tinted plaster suitable for papering some future date. The kitchen features a judicious use of space, with appliance built-

in and with most of the wall space taken up with built-in closets, shelves and drawers.

All of the bedrooms, while comparatively small, have ample cupboards, each of which is equipped with its individual electric light. The bathroom is fitted with a built-in tub with shower, and a built-in electric heater to remove the chill

MODEL HOME CONTAINS MANY MODERN ELECTRICAL FEATURES

The Bellefonte Chamber of Commerce, sponsor of the Demonstration Home on East Linn Street, has provided the latest type of illumination for the fortunate family that will occupy the dwelling. And to the many visitors who will throng to the house during the next ten days, no single feature of the home will add more to the beauty of the rooms than the light from the modern indirect and semi-indirect fixtures that have been installed.

Many persons are expected to visit the home from April 29 until the closing day, May 7. The daily visiting period is from 2 p. m. to 10 p. m. and there will be a hostess on hand to answer your questions and explain the special features of the home. The home is located on East Linn Street—directional signs have been placed to guide visitors.

"Red Seal" wiring has been installed. This provides plenty of electrical outlets throughout the house, enabling the occupants to enjoy the benefits from the use of port-

able lamps that furnish good lighting for your protection, and further beautify the rooms.

The importance of eyesight protection to individual health and well-being has been considerably publicized during the past three or four years, due to discoveries made in various scientific laboratories—so that the Bellefonte Demonstration Home, by its emphasis on good lighting, is decidedly up-to-date in that respect, just as it is in many others.

There is, for instance, an electric kitchen in the home—making possible the automatic cooking of meals on the electric range, with its consequent saving of time and work. The electric refrigerator guarantees every possible saving in food preservation, in addition to the enjoyment of frozen desserts and salads and the use of an ample supply of ice cubes.

The appliances and equipment above mentioned are included in the purchase price of the home.

in the room during cool weather.

The basement contains a paneled game room; a laundry with built-in tub; a garage with car washing facilities, and a furnace room. The heating system consists of a Holland steel hot air furnace, with warm air under pressure being distributed to each room through individual air ducts. Each room also has a return pipe to carry cool air back through the furnace. Heat control is fully automatic.

The lighting system is one of the most complete and modern to be installed in any local home. All fixtures are of the indirect lighting type, with switches so located that steps do not have to be retraced in turning off lights while passing from room to room.

Outside floodlights located at each of the four corners of the house and controlled by central switches at several strategic points on both floors of the building, provide a unique type of burglar and prowler insurance. A flip of a switch will cast a brilliant light around the

entire property.

Access to the garage in the basement is gained through a driveway around the east side of the house, and the roof of a portion of the garage is used as a sundeck.

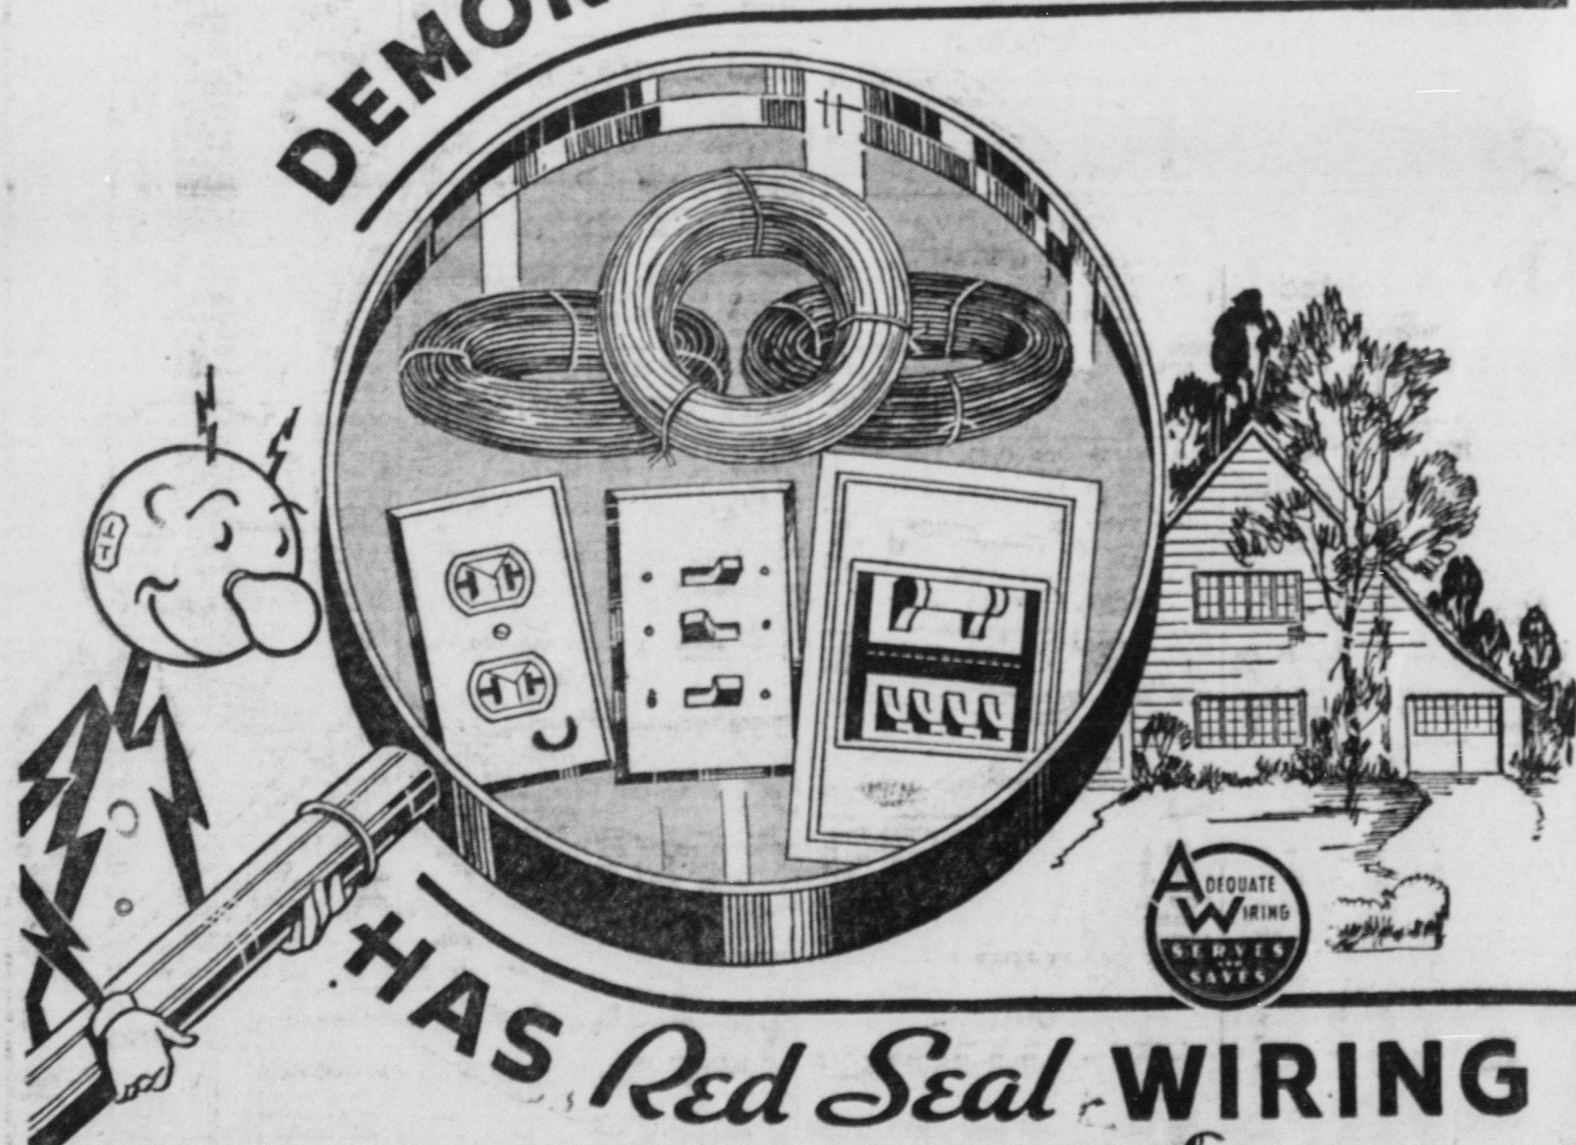

The exterior color scheme is white with brilliant red shutters. The shutters blend with mottled composition roof shingles.

The Wolf Furniture Company is now engaged in completely furnishing the home, under the direction of an interior decorator from the John Wanamaker store, Philadelphia. All the furnishings will be new and of modern design.

The sponsors and owner of the building extend a hearty invitation to the public to visit the demonstration home during the next week. In it will be found many of the most modern developments in home building and furnishing. It is largely to stimulate local interest in low-cost home building that the Bellefonte Chamber of Commerce entered the movement to act as sponsors in the opening of the Stewart house.

Sponsored by the Chamber of Commerce

The Bellefonte DEMONSTRATION HOME

"RED SEAL" WIRING has been installed in the Demonstration Home, with adequate circuits, properly located convenience outlets and step-saving switches—so that the occupants may at once enjoy the full benefits from the use of lamps and appliances—and new additional electric devices in the years to come. ADEQUATE WIRING SERVES AND SAVES!

Four Other Big Features That are Also Included in the Purchase Price . . .

ELECTRIC KITCHEN—Contains an electric refrigerator, an electric range and plenty of cupboard space—all arranged for convenience, time-saving, step-saving, work-saving.

WINTER AIR CONDITIONING—Filtered and humidified warm air from the furnace is forced by a fan through ducts to all rooms. This heating system, with its thermostatic control, assures good circulation, even temperature and greater cleanliness throughout the house.

SIGHT-SAVING LIGHT—Modern lighting fixtures provide an abundance of light, free from annoying shadows and glare—good light that helps protect eyesight and further beautifies the rooms.

ELECTRIC WATER HEATER—Located in basement. Serves abundant hot water to kitchen, bathrooms and laundry. Operates automatically.

LOCATED ON EAST LINN ST. BELLEFONTE, PA. FOLLOW THE DIRECTIONAL SIGNS OPEN EVERY DAY APRIL 29 - MAY 7 (Inclusive) 2 P. M. to 10 P. M.
