# Preventive Medicine ORTHE SIGNIFICANCE OF Your DOCTOR ANTS'TO *KEEP* YOU WELL

"Your Doctor wants to KEEP you well" is emphatically and literally true, both of the individual physician and of medical scientists in general. The administration of drugs, surgery and treatment of dis-

ease are by no means the sole functions of the modern doctor and scientist. He is just as active in the prevention of disease as in curing it. Spreading the gospel of health rules and hygicnic living is prevention of ill-health; establishment of clinics for the control of infant mortality is prevention of unnecessary death; tuberculosis societies and sanitoria, can-cer institutes, and hundreds of scientific research bureaus all are laboring to prevent as well as cure disease. Prenatal care is to prevent unnecessary suffering and death; school supervision of health is to promote better bodies and minds and prevent disease; all were worked out by doctors in their battle for better health and less sickness. The proper drainage of mosquito-breeding marshland is pre-vention, but back of that piece of public-health engineering. the scientist had to discover that malaria was caused by mosquitoes. Administering vaccines and serums prevents smallpox, diphtheria, typhoid, whooping cough and other diseases, but years of patient work by medical men went into

perfecting these instruments of "preventive" medicine. Telling you over and over to "have a complete examination once a year 'is 'preventive medicine,' in that it locates trouble IN TIME and helps your doctor to keep you well. Every year the physician his daily practice becomes more and more a HEALTH adviser.

"Telling the Public About the Doctor" appears weekly in this paper.
