DIETING SHOULD BE DONE UNDER THE ADVICE OF YOUR DOCTOR If you are overweight you are probably eating too much. You are daily putting into your stomach more food than the system needs to keep a proper balance. There are two ways

to prevent, stop or reduce this overweight and they are - reduce the amount of food or increase the amount of exercise. Overweight taxes the kidneys, because they

have to carry away the excess poison from the

fat tissues, and from the over-burdened di-

gestive tract of the average fat person, as well as perform their normal duties. Overweight also taxes the arteries by making them work 'overtime" carrying off excess poisons and wearing them out before their time. Overweight works the heart "overtime" in the same way, because it must meet the burden of pump-

ing blood to all this useless and superfluous tissue. Dieting to get thin demands scientific judgment. Violent exercise can be injurious; medicines strong enough to remove fat are strong enough to produce dangerous changes in the bodily functions, and often permanently undermine health. If you are overweight, talk it over with your doctor - - and

then follow his advice.
