Dictionaries, here's a new word - HYDRO-FORMING!

Americans, here's an entirely new way of making gasoline—destined to give a new definition to power!

The word is so new it isn't in the dictionary yet—but you'll hear it a lot from now on. From a revolutionary new refining process—Hydro-forming—comes a new gas that steps up all old ideas of what gas can do—of how much work per drop it can turn out! For Hydro-formed American Gas solves the problem in an entirely new manner, releasing more power because it burns in a different way.

Now Comes Flame Control—Combustion Control! Burning gasoline vapor is the source of engine power. How it burns tells how much will be used, and how much wasted. Old-fashioned gasolines burn with an explosive, violent shock, and much of the power is lost in wasteful detonation. But if that flame—combustion—can be controlled, we achieve power with less violent shock—usable driving power, not wasted power. This is exactly what FLAME CONTROL accomplishes—now attained in Hydro-formed American Gas! Combustion IS controlled. We have power—sustained, increasing, e-x-p-a-n-d-i-n-g pressure on the pistons—dynamic thrust that reaches for more of the potential energy in every atom of gasoline. But shock is greatly reduced. Flame Control Means Cushioned Power! As violent, detonating shock is cut down, Cushioned Power replaces it. We retain all the energy of the combustion, yet we have a soft, sustained, cushioned surge of power. Motors are s-m-o-o-t-h, obedient, yet thoroughly alive with action. Destructive blows on bearings and other delicate motor parts are hushed, and in their place comes a satin-soft f-l-o-w of power.

Increased Volatility Makes Better Road Octane! Hydro-formed American Gas is more volatile, more aromatic, more easily vaporized. Its anti-knock constituents do not remain in a liquid state as in the average conventional gasolines, but become vaporized—distributed more evenly and impartially to all cylinders alike. Official results of road tests by Industry Committees show that conventional gasolines, on the average, lose octane on the road. Hydro-formed American Gas actually gains them—surpassing laboratory figures. And it's road octane that counts, not laboratory ratings!

Hydro-formed AMERICAN GAS Still At Regular Gas Price! You don't have to be a chemist to realize the tremendous importance of this discovery, pioneered by the American Oil Company. Yet in spite of all these amazing improvements—in spite of the new power now available, this latest discovery of gasoline chemistry still sells at regular gas price! Famous AMOCO-GAS Now Hydro-formed, too! The new Hydro-forming process has also been applied to Amoco-Gas, the original special motor fuel, which likewise moves forward and upward to an all-time high in quality and efficiency. A new and greater source of power—a new and greater motoring pleasure—a thrilling experience—all these await you in Hydro-formed American Gas and Amoco-Gas.
