Mosquito Air-Raid—The Burma Road, artery of much-needed supplies for China, is under constant attack by bomb-loaded airplanes, and malaria-carrying mosquitoes.

Is Shell Shock a Wound?—Observations in England are leading to revision of the idea that "shell shock" is only a functional nervous disorder.

More Trouble for Mussolini—It is reported that a typhus epidemic is raging among the Italian troops in Albania.

Keeping Culture Alive—The Polish government in exile has accepted from the University of Edinburgh an offer of facilities for the establishment of a Polish school of medicine.

Calling All Spooks—Several years ago, The Universal Council for Psychic Research announced an award of \$10,000 to be given to any medium who can produce any effect in spiritism, or any super-natural manifestation, which its chairman cannot duplicate or explain through natural or scientific means.

Life-Saving Simplified—Underwater rescue work, until now a hit-or-miss, long drawn-out diving ordeal, has been simplified by an apparatus which permits a diver to stay under water for 18 to 25 minutes, in depths up to 60 feet.

At Last—The Dunlop Motor Company, in England, has realized the dream of many a motorist—rubber fenders. They have been overwhelmingly accepted by motorists.

Here's What President Roosevelt's National Emergency Decree Means

Under the powers of unlimited national emergency which President Roosevelt proclaimed in his radio address Tuesday night, the chief executive may close or commandeer radio stations, demand preference for troops and war materials on any transportation system, suspend trading on securities exchanges, and take over power-houses, dams and conduits used in munitions and manufacture.

These are but a few of the broad powers available to him. Any step he may choose to take, aside from actual declaration of war, must be done by individual proclamation. Only Congress has authority to declare war.

President Roosevelt proclaimed an emergency in 1939, which he described as "limited." Government legal experts said, however, that there was no clear distinction between a "limited" and an "unlimited" emergency, and that technically the President could call into force his full powers in either case.

Some of the emergency powers may be brought into use only after a declaration of war, but the majority are operative in various degrees of peril or concern as determined by the President.

The President may do these things: Forbid Federal Reserve banks to do business except under treasury regulations.

Investigate, regulate or prohibit transactions in foreign exchange. Place the coast guard under the Navy (Mr. Roosevelt already has transferred part of it to the Navy).

Refuse clearance of vessels of a belligerent country which discriminate against American vessels or citizens. Empower the federal power commission to require temporary connections for the transmission of electric energy.

Require any vessels to leave the United States waters or prohibit any vessel from entering them. Remove duties from imported food, clothing and medical supplies needed in emergency relief work.

Waive or modify the monthly apportionment of federal appropriations. Order the national guard and army and navy reserves to active duty (this already has been done).

Wheat Growers Vote Saturday (Continued from page one) and must have a normal output of 200 bushels. Before a change in eligibility was made recently all those farmers raising 200 bushels yearly were designated as eligible to vote.

Six polling places will be set up this Saturday to give farmers an opportunity to vote on the act affecting wheat marketing. The balloting will be in charge of the Centre County Wheat Referendum Committee.

Polling places will be open from 9 a. m. to 9 p. m. (EST). Voters are permitted to vote at any of the polling places but are asked to cast their ballots at the voting place designated for their district.

Following are the six polling places and the districts they represent: Howard, Election House, Millheim, Municipal building; Penn. Haines, and Miles townships; Spring Mills, C. H. Eungard implement shop; Gregg and Potter townships.

Grange Hall, Boalsburg; Harris, College, and Ferguson townships. Port Matilda, Community Bank; Worth, Union, Huston, Burnside, Taylor, Rush and Halfmoon townships.

Members of the Wheat Referendum Committee who are in charge of the voting in Centre county are Paul Thompson, Millheim; Henry Stover, Aaronsburg; Frank Stover, Millheim; R. D. Willard Hettinger, Spring Mills; Wallace Bohn and Ralph Grysing, Centre Hill; S. A. Homan, Pennsylvania Furnace; Edgar Hess, John Stover, State College; M. G. Walker and John Keiler, Port Matilda; Edward Flick, Pioming; George Weight, Bellefonte; R. D. Charles Schenck, Howard; Joseph Nymann, Schenck, R. D.; George Wilson, Bellefonte; R. D.; Tom Dunkle, Mifflinville; H. Malcolm Musser, Bellefonte, R. D.

A recent change in the voting regulations of the referendum, the committee announces, permits an eligible farmer to vote by mail in case he is unable to go to the voting place. The farmer may obtain a ballot from the conservation office at Bellefonte.

The voter should mark his ballot and mail it to the office in the post office building so that it reaches the office not later than June 2 at 8:30 a. m. (EST). The voter's name and "wheat ballot" should be placed on the outside of the envelope.

Lightning Hits Bellefonte Man

(Continued from page one) burned about one side and hip. He quickly recovered, however and no serious injury resulted.

James Kelley was stunned but otherwise unhurt. Others in the building were not affected.

A stunning electrical strike hit the upper portion of the G. Edwin Moore home on W. Beaver avenue, office building, during the height of the storm. Alpha Fire Company was called out at 4:30 by frightened members of the Bower Moore family who rent an upper floor of the house, but no fire was discovered.

Mr. and Mrs. Bower Moore and an uncle, W. L. Bower, were sitting in an upstairs room when the flash struck. A ball of fire was reported to have rolled into the room, leaving small holes in the wall and burned marks near wiring.

Narrowly missing expensive weather and radio equipment, a chimney on the southeast corner of the Mineral Industries building, at Penn State. Most of the bricks on the chimney were loosened.

Marjory and Kaye Ulmer, 11 and 8-year-old children of Mr. and Mrs. Floyd Ulmer of the Pine Grove Mills road went into the fields near their home to bring in their pony just as the storm was beginning to break. Lightning struck the tree under which they took shelter when rain and heavy winds started. Both were badly frightened, but uninjured.

Weather authorities said the western end of the county was hardest hit by the tempest. Heavy, but brief, hailstorms were recorded near Pine Grove Mills and at Rattlesnake Fire Tower.

Severity of the storm apparently decreased beyond Pleasant Gap. In Bellefonte the storm was comparatively light.

2 Injured In Crossing Crash

(Continued from page one) lacerations of the face and cuts of the left hand and right knee. He underwent treatment at the Hospital dispensary.

The accident happened about 1:50 p. m., while Mr. McMullin and Miss Siegal were returning to their homes from a district American Legion meeting at Osceola Mills. Miss Siegal, a nurse during the World War, is an active member of the American Legion.

According to a report by T. J. Kelleher, of Bellefonte, conductor on the train, the train was motionless on the crossing when the car, traveling east, struck it. The two victims were taken to the hospital by a motorist from Altoona. Pvt. John Amick, of the Pleasant Gap sub-station State Motor Police investigated the mishap.

Only One Civil War Veteran in County

(Continued from page one) County, on November 23, 1943, and on November 13 this year will observe his 99th birthday.

As a youth of 18 he became a member of Co. E, Pennsylvania Cavalry, and was with the Army of Tennessee during most of the war. He fought in the battles of Murfreesboro, Chickamauga and Chattanooga.

After the war Mr. Walker returned to his area and was united in marriage with Miss Lucretia DeHaas, of Beech Creek. For many years he engaged in farming in the Clintonville area, tilling some of the lands which had been in the original vast holdings of the Walker family since the settling of this part of Pennsylvania. He retired from active life, some years ago and now makes his home with his son-in-law and daughter, Mr. and Mrs. Fred G. Merkle, of Sunset Road, State College.

Surviving children, in addition to Mrs. Merkle, are two other daughters, Mrs. John Wolfe, of Jersey Shore, and Mrs. Guy E. Swartz, of Detroit, Mich. Mrs. Walker passed away some years ago. There are two grandchildren.

Despite the fact that he is only 19 months under 100 years of age Mr. Walker is unusually alert, mentally and physically. His eyesight and hearing have begun to fail, but aside from that the years have touched him lightly. He performs light tasks about the merkins and occasionally walks downtown, a distance of more than a mile each way.

Although the aged veteran is not able to read newspaper print, or hear the radio, he reads the headlines regularly and in this way and through conversation with friends he keeps well informed about the present war in Europe.

"We'll get in no war," he predicts, but will not hazard a guess as to the final outcome of the conflict.

Mr. Walker is the last member of the Centre County Grand Army Republic which, in former years held much the same position in social and community life. Thus the American Legion and Veterans of Foreign Wars do today. He is a member of the State College Evangelical church.

Memorial Concert By Legion Band

(Continued from page 1) was featured at all football games last fall with the Blue Band, and after the Philadelphia trip he was referred to by the Philadelphia papers as the National Scholastic Batm Twirling Champion. Along with his expert twirling, his acrobatic stunts are something that are acclaimed as marvelous where ever he has appeared.

Federal Civil Service Examinations Announced

Civil service examinations for the positions described below have been announced by the U. S. Civil Service Commission. Applications will be accepted at the Commission's Washington office not later than the closing dates specified. The salaries are subject to the usual 3 1/2 percent retirement deduction.

Landscape architect, various grades with salaries from \$2,000 to \$5,000 a year. Applicants must have completed a 4-year college course with major study in landscape architecture, engineering, or design. For the junior grade, a 4-year general college course plus the completion of the work leading to an advanced degree in the field listed above or in city planning will be accepted, for all but the junior grade professional experience in landscape architecture is required. Applications must be filed not later than June 26, 1941.

To fill the needs in various Government agencies for nurses for hospital and public health nursing, medical technicians, and laboratory workers, two new examinations in these fields and a revised type of examination for junior graduate nurse have been announced. They are: Public health nursing consultant, \$2,000 and \$3,200 a year. Completion of a 4-year college course including or including by its health 1 year of study in Public Health Nursing, graduation from an accredited school of nursing and experience as public health nursing supervisor are required. The closing date is July 26, 1941.

Medical technician, \$1,620 to \$2,000 a year; junior laboratory helper, \$1,440 a year. The optional subjects are general and roentgenology and in addition for some of the positions, surgery. Applications must have completed at least 14 units of high-school study, unless they pass a written general test. Appropriate laboratory, clinical or operating room experience is required.

Junior graduate nurse, Veterans' Administration, Public Health Service, and Indian Field Service, \$1,620 a year. Applicants no longer required to take a written test, and the vision requirement has been modified. Applications will be rated as received until further notice.

Applications for the positions of card-punch operators and tabulating machine operators listed below will be rated as received until further notice. Appointments will be made in Washington, D. C., only. A written test will not be given.

Alphabetic card-punch operator; card-punch operator, \$1,260 a year. Applicants must have had at least 2 full months of paid experience in the operation of card-punch machines, or a training course which included 60 hours in actual operation of card-punch machines. Tabulating machine operator, alphabetic tabulating machine operator, \$1,260 to \$1,440 a year. Applicants must have had appropriate experience in the operation of electric tabulating or alphabetic tabulating machines.

Full information as to the requirements of these examinations, and application forms, may be obtained from the Secretary of the Board of U. S. Civil Service Examiners, at the Bellefonte post office or from the Secretary of the Board of U. S. Civil Service Examiners, at any first- or second-class post office.

New stamps in Rome bears portraits of Hitler and Mussolini. We hope they're licked and stuck where they belong.

GROW BEANS FOR BOTH CANNING AND FREEZING

Beans grow best in a warm season with relatively high humidity, according to County Agent R. C. Blaney. They are easily susceptible to frost injury and lima, particularly, are sensitive to extremes of temperature. Low temperatures are unfavorable to leaf growth, while extremely high temperatures may interfere with the setting of pods.

A fairly fertile loam soil, containing a good supply of organic matter and well drained but retentive of moisture, is best for beans. Thorough seedbed preparation kills germinating weeds and reduces the need for later cultivation.

Where the soil is fairly fertile or manure has been applied liberally, 4-12-4 or 4-16-4 at the rate of 400 to 600 pounds per acre usually is sufficient for snap beans. Without manure, 3-12-6 may be applied at the rate of 600 pounds an acre. On Sandy loam soils, especially for the early market crop, 800 to 1000 pounds an acre of a 5-10-5 or 5-10-10 is not too much.

Lima beans are more exacting as to their soil and fertility needs. A mellow soil is necessary for germination and early growth. An application of about 1,000 pounds an acre of 3-12-6 or similar fertilizer is suggested. Side dressings of available nitrogen fertilizer, either about 200 pounds an acre of nitrate soda, or 160 pounds of sulfate of ammonia, or their equivalent, may be applied where the crop is retarded in growth. However, too much vine growth and the dropping of blossoms may occur with excessive applications of nitrogen.

The safest method to apply fertilizer is broadcast before planting and then work it deeply into the ground. Row applications give best results when applied in bands 1 inch from the seed and 2 inches deep. When only a small amount of fertilizer is available, such as 150 to 300 pounds an acre, it is much more effective applied this way than broadcast. Strongly acid soils should be limed before planting.

EARLY THINNING OF PEACHES ADVISABLE

With the present scarcity of farm labor, County Agent points out the advantage of starting peach thinning as early as possible in order to complete the work by the time the fruit reaches the pitting-hardening stage. He reminds that it is more pertinent to ask, "How early may I start peach thinning?" than "How late may I continue?"

Early thinning, just before or soon after the June drop, is much more effective in producing large size than later work continued to mid-July when most of the June drop peaches have fallen. Present prospects indicate that the work should be started the first week in June, particularly with early varieties where early and heavy thinning is most imperative.

Time of thinning often is more important than spacing. Thus, 4-inch spacing with early thinning may give better size than 8-inch spacing with late work. Although all thinning will tend to reduce slightly the total yield in the current season, the reduction is greatly offset by the reduction in insect and late treatments. Early thinning will require more time but will give greater returns. This year's treatment will influence next year's crop, since thinning will conserve the vitality of the tree in proportion to the earliness and number of fruits removed.

Although age and vigor of the tree and the set of fruit influence spacing, 6 to 8 inches between fruits generally is adequate for early peaches, while 4 to 6 inches may be suitable for the later and larger varieties. The larger and more perfect specimens should be saved, even if it necessitates irregular spacing, provided that no two fruits are left close enough to touch before harvest.

We still insist that agriculture is entitled to a larger portion of the national income and we don't care how the matter is arranged.
