Mention Boal Tract for Camp

(Continued from page one)
transportation facilities, elevation, and good water supply were some of the reasons for seeking the camp.

While the Boal tract was not specifically mentioned in the resolution, it is believed that the tract was among the sites intended since the late Col. Boal and other prominent Centre countians in the past have made efforts at various times to have an army reservation of some nature established in "The Barrens."

Representations of this district in Congress have been asked to present the petition to the War Department.

Farmers Asked To Sell Metal

Unused Scrap Iron Should Be Collected and Sold Immediately

The estimated million to a million-and-a-half tons of scrap iron lying useless on American farms, if combined with other necessary materials, would be sufficient to build 139 modern 35,000-ton battleships for the United States Navy, according to advice transmitted by OPM to the Department of Agriculture.

Through its farmer-committee organization, the USDA State and County War Boards have taken the responsibility of collecting the scrap metal from the nation's 6,000,000 farms.

Scrap iron, Mr. Rishel, chairman of the USDA County War Board for Centre county, pointed out, is an essential ingredient in the production of steel.

"That 125 pounds or so of rusty scrap iron, when mixed with other materials is enough to make a 500-pound aerial bomb. And if you pile it up with that of all the farmers in your county, 26,000 pounds of it will make one 27-ton medium tank."

The total amount of scrap available on American farms is estimated to make possible the manufacture of 50 million machine guns of 50 calibre, or 150,250 light tanks of the type which the British have used so effectively in the Libyan campaign.

To the USDA County War Boards goes the task of helping to move the metal off the farms into the smelters and mills in the greatest production drive in the nation's history.

The immediate need for scrap iron is indicated by the fact that many small steel plants throughout the country have been slowed down or have had to suspend operations.
