controlled by the brain and spinal H. Homan. cord just like striated muscles, which Terms of sale, cash. E. M. Smith, execute conscious movements, according to a paper read by Dr. Othello R. Langworthy and prepared in collaboration with Dr. Frederick H. Hesser at Johns Hopkins university, Baltimore. The two doctors experimented with cats by cutting out the portion of the cat's brain which controls movements. Cats so treated promptly developed ravenous appetites. A balloon was placed in the test cat's stornach and air pumped into it to measure the muscular reaction. Instead of relaxing to accommodate the extra volume, as happened in the case of the normal cat, the muscles of hens, gander, 200 bushels of oats, the test cat tensed contracting the some hay. the test cat tensed, contracting the stomach. From this the doctors deduced that no other nerve center to direct the operation of the stomach muscles existed in the cat's body than the two which had been removed from the brain, and that the muscles were controlled by reflex
