# If You Can't See the Tread--SEE US!

When your tire has the first sign of a smooth appearance, when the tread has worn off—that is the time to see us for recapping service. Every mile you drive beyond that point endangers the life of that tire. As the casing rubber wears off you get near the cord fabric, which means that continued driving could very likely ruin it altogether so it could not be recapped. Further, it heightens the possibility of a blow-out.

## Just a Little Care Will Save Your Tire

All you have to do is use normal care. Drive within today's speed limits. Don't make jump starts or stop too suddenly. Don't bump over curves. Check wheel alignment. Have tires inspected regularly. Maintain proper air inflation. Occasionally change wheels from front to rear. The rear right tire wears out faster than the others. Best of all, look to us for tire guidance. We'll keep you rolling!

## Every Turn of the Wheel Means That Much Added Wear

# Repair and Recap Now!

A small stone bruise or cut may not seem very important to you. But every time your wheel turns you aggravate it that much more. Tires flex when your car runs. That is a constant expanding and contracting. A minor repair may save your tire, and possibly your life. Let us attend to it promptly when it is time to recap. Don't wait—do it then.

## Don't Gamble on New Tires - They Will Be Very Scarce

The more people who become eligible for new tires the less chance you have. New tire production will be far less than the original 30,000,000 estimate, and that was only slightly more than one tire for every passenger car. Actually, LESS than one tire per car will be made this year. That leaves at least three tires to depend on the best of service promptly—efficiently—carefully. Heed our good and sincere advice and you'll drive through the emergency. Truck tires will be scarcer yet.
