

The Spatch. ESTABLISHED FEBRUARY 8, 1846. Vol. 44, No. 216. Entered at Pittsburgh Postoffice, November 14, 1885, as second-class matter.

flourished under the very shadow and countenance of the law. Perhaps the inquiry into this celebrated case, which seems likely to occur now, may lead to a change in the law, not only in New York, but in other States, not excepting Pennsylvania, where the same changes are liable to be born of an evil system.

THE TOPICAL TALKER. The Preacher of the Dress Reform—A Denial of Contrivance to Foster Peace. Mrs. JENNIFER MILLER, who is to tell Pittsburghers on Tuesday evening, is not only a fashionable, well known city-to-day, but she is likely to have a large and appreciative audience this afternoon because the subject of dress reform is one of the most interesting to most women, because she has the reputation of being a good talker, who dresses richly and in good taste, and because in Pittsburgh there are multitudes of women who are well and are willing to learn how to dress better.

THE SEPTEMBER SKIES. Old Sol Approaching Libra and Luna Nearing the Earth—The Autumnal Equinox—Why the Sun Appears Elliptical in Shape—The Planets' Phases. The sun is now rapidly making his way toward Southern climes, and the days grow shorter and shorter. On the 22nd of the month, at 3:38 P. M., he crosses the equator, and enters the zodiacal sign Libra, which marks the beginning of autumn. This is called the autumnal equinox—quinox from the Latin equus, equal, and nox, night, because then the days and nights are considered equal in length. As a matter of fact, the days are still longer than the nights at that time. Twilight, of course, prolongs the daylight for an hour or two in the morning and evening, but even if we consider the day's length as the time between the sun's rising and setting, the day is several minutes longer than 12 hours, on account of the refraction of the sun's rays by the earth's atmosphere.

CURIOS CONDENSATIONS. "A Little Girl in Dayton, O., found a pocketbook containing \$3,000 and restored it to its owner." "Upward of 28 large bales of human hair were brought to France in the last steamer that arrived from the Orient."

30,045 Average net circulation of the daily edition of THE DISPATCH for six months ending August 31, 1890. 55,643 Average net circulation of the Sunday edition of THE DISPATCH for three months ending August 31, 1890.

THE EXPOSITION'S OPENING. The large attendance, considering the threatening weather, at the opening of the Exposition last evening testified to the interest of our citizens in that enterprise, and the abundance of local pride which will insure it a liberal home support. The latter spirit was much gratified by the size and adequacy of the buildings which fortunately made up for shortcomings due to the general lack of time for preparation.

THE HARVEST MOON. The moon is now rapidly making his way toward Southern climes, and the days grow shorter and shorter. On the 22nd of the month, at 3:38 P. M., he crosses the equator, and enters the zodiacal sign Libra, which marks the beginning of autumn. This is called the autumnal equinox—quinox from the Latin equus, equal, and nox, night, because then the days and nights are considered equal in length.
