

A .- From Above the Schindery.

gabela river, or that the schindery was not source of impurities and disease germs, the agitation for its removal should be discontinued. If the facts were established. otherwise the people and the public authori ties should know it.

No interest other than the public health was at stake, and the result of the investigation is given, regardless of the reflection it may cast on those who may have been derelied in performing their duties as public officers, who are responsible in a measure for the public health. On February 6 the following letter was addressed to Dr. E. A. Mun-dorf, of the Southside:

A REQUEST AND ITS RESPONSE. DEAR SIE-Will 7 + please analyze accom panying samples of water from above, at, and iow the Beck's run schindery, for the benefit the readers of THE DISPATCH." C. C. MODAR, City Editor DISPATCH.

Dr. Mundorf's reply and his report on the analysis follows:

PITTSBURG, February 21, 1890.

suffering for some time past with cancer of the stomach, but had only been confined to his house since Friday last. He was up and going around the house early yesterday morning, and ate a small breakfast. After eating he retired to bed, where he expired in a very short time. * Mr. McCall was 55 years of age, and the

proprietor of the West End Coal and Coke Works, located on Main street.

dent of the Amalgamated Association, was called upon yesterday in reference to the

charges made at the meeting of Trustworthy Lodge, that certain officials of the organiza-tion were alleged to have accepted bribes of money and otherwise acted in collusion with Shoenberger & Co. Mr. Sullivan

C. C. Mooar, Esq.; C. C. Mooar, Esq.: DEAR SIR-In response to your letter of February 6. I send you the results of the analy-sis of the samples, as requested by you. Great care has been taken in this analysis, to arrive at right conclusions; and I trust that it will show more clearly than ever the need of re-form in the manner of choosing our water sapply. Very truly yours, E. A. MUNDORF, M. D. To the Editor of The Disnetch:

of water obtained from Beck's run by you, and streams to the run. It was from placed in my hands with written instructions streams that the sample marked "B" was to analyze it for the benefit of the readers of taken. THE DISPATCH.

These samples, inbeled respectively "A," "B" and "C." were obtained, as you are aware, in the order of their mention, from Beck's run, above the schindery, from the sweepings of Beck's run. But the logical argument These samples, labeled respectively "A," "B" above the schindery, from the sweepings of the schindery Haelf, and from Beck's run below the schindery. WHAT IS IN IT.

WHAT IS IN IT. First-The sample marked "A," gottep from the run above the schindery, contained a con-the run above the schindery, contained a con-should be removed. It is no argument to say that the contribution coming from the say that the sumall in quantity. Science sediment in the bottom of the vial holding the fluid. This sediment, on microscopic analysis,

B .- The Schindery's Contribution to Science.

was found to be made of the following compon ents: Animal excreta in large quantity, cpithe lium from animal tissues, putrefactive ba in swarms, flagellata, vegetable debris, and

Second-Sample "B," taken at the schindery, Second-Sample "B." taken at the schindery, was found to contain: Animal excreta in very large proportion, enithelium from organized tissues, flagellata, vegetable cells, putrefactive bacteria in swarms, ova of probably entozoa, several species of microscopic round worms, one of which bears considerable resemblance to trichina spiralis, and floally bactili, which, so far as we may judge by the auplication of re-liable tests, appear to fill the description of typhoid and of tubercle germs-the whole forming a singularly borrible and daugerous mixture. mixture

mixture. Third-The sample labeled "C," taken from Beck's run, below the schindery, contained a sadiment similar in color and quan-tity to that found in the sample from above the run, and was found upon analysis to be com-posed as follows: Animal excreta in large ex-cess, a part similar in density to that from the schindery, the remainder identical with that found above the schindery in the run; putre-factive bacteria in large numbers, epithelium from animal tissues, bacilli which, under a one-tenth Spenser objective, were found to corre-

from animal tissues, bacilli which, under a one-tentih Spenser objective, were found to corre-opood closely with typhoid and tubercle germs, and to have taken the special stains appropriate to these species: flagellata, vegetable debris, and crystals of organic origin. These three samples of water contained in the bottles placed in the writer's hands, to have an analysis made of them, are faithful representations of the condition of the water in Beck's run, and of the character of the im-purities in solution in that stream, which are purities in solution in that stream, which are carried on to contaminate the Monongabela river. The sample gotten at the schindery affords a telling and horrible illustration of the kind of contaminations that our drink water is polluted with.

GERMS OF DISEASES.

Whether the quantity of foul organic matter at the schindery be great or small, if it is permitted to lie undisturbed, it soon becomes the breeding place of entozoa, the source of poisonous exhalations, and the faithful habitat of those most dangerous of all forms of micro-scopic life, the bacilli of typhoid fever and

It is a matter, therefore, of little moment
