

STUCK BY A SNAG.

Difficulties in the Way of Enforcing the Ordinance Enacted to Abolish Surface Drainage.

CASES WHERE IT IS PREFERABLE

To Making Connection With City Sewers, on Account of Danger of Disease From a Family System.

SOME TREATS OF SUING THE CITY

If the Immense Sewage of Certain Districts Cannot Be Safely Carried Away.

The city is likely to find some trouble in store when it comes to a question of enforcing the ordinance, lately passed, making it obligatory on property holders to make proper sewer connection between their houses and the main sewer in the East End, where in one district, so far from desiring any connection with the main sewer, the inhabitants have found it necessary to cut off all means of communication as a necessary safeguard against disease.

According to the statement of Dr. A. J. Davis, of the East End, who from his lengthy residence in the district may claim to know a little about the matters whereof he speaks, the sewers in Beatty street, Kirkwood and Broad streets, which drain a pretty considerable area, are entirely inadequate to carry away the sewage, and in rainy seasons become so flooded as to fill the cellars and cesspools of the neighboring houses with refuse matter, to the imminent danger to health of the inhabitants.

NOT ALL SMOOTH SAILING.

When the enforcement of the ordinance is directed against these people, there are likely to be "ings on the green." They have paid for sewer accommodation, which only accommodates them with threatened disease, and they are not prepared to return to a system by which they incur danger instead of benefit, without a vigorous fight.

The ordinance referred to, and which went into effect this month, was passed by Councils partly as a sanitary measure and partly as a matter of expediency. But to quote Superintendent of Highways and Sewers James P. Andrews, who was called upon yesterday in reference to this subject: "The ordinance referred to, said he, is a gentlemanly one in the line of dealing with the paving of sidewalks. If an inspector orders a sidewalk in such a condition as to warrant repair or construction, it became his duty to serve notice of the fact on the property holder. If, after 20 days, the work had not been done, the city could then appoint a man to do the work, authorizing him to call upon the property holder for payment. If the latter refused to pay, the contractor could, at the instance of the city, obtain a lien on the property. Similarly with this new ordinance, the inspectors will ascertain what houses are unconnected by pipes with the main sewers and will serve 20 days' notice on the property holder, making proper connections. After that time, if the work is not done, it will be performed as in the case of sidewalks. The inspectors, of whom there are eight, are now serving notices in such cases as come under their notice. They are not, however, making any efforts to find out where surface drainage exists, but do so in the routine of their duty.

THE ORDINANCE NEEDED.

"It was necessary," Mr. Andrews continued, "to pass this ordinance. The custom of throwing slops and refuse into the yards and back alleys, and the consequent danger to the public health. In winter time these accumulations would freeze into hard cakes and it costs the city between \$1,000 and \$2,000 each month to remove the same."

Asked to indicate some particular district where surface drainage was much in vogue, Mr. Andrews mentioned the Point "Beatty street," said he, "is nothing more than a mound of cinders. From Penn avenue to Duquesne way the property on the east side has several inches by one inch of drainage. It could not be paved, because the ordinance provides that one-third of the property holders should petition before any work could be done. Here there was but one owner, and Mrs. Wheeler, I understand, refused to petition, and of course nothing could be done. For the same reason there is no sewer in the street, and necessarily surface drainage must exist with all its evils. The East End, too, cannot have adequate house connection with the sewers, because the latter have not been laid long enough to reach the houses. There is no doubt as to the desirability of underground as against surface drainage, and as soon as the inspectors report, measures will be taken to enforce the ordinance."

It was in the neighborhood of the flourishing locality of Highland avenue that the conditions of affairs referred to above were discovered. Mention of the ordinance and its conditions was made to a gentleman who has resided for some time in the district. "Although unacquainted with the ordinance," said the resident, "I have no doubt that many of the houses heretofore are unconnected with the sewers. Judging from the number of notices about it, I should say they were not. You all observe that the pipes carrying the rain water from the roofs discharge into the sidewalk, and so into the streets."

THE PROPER COURSE.

"Well, it is very evident that if the city authorities pursued the right course they would utilize this great flow of water to flush the sewers and help carry away the stagnant refuse rather than have it wasted in this manner. Of course, it ultimately finds its way into the main sewers, but it should be discharged directly into the house sewers, where it would do no harm. Besides, the ramps, being connected with the sewer, it would carry away the gas above the roof where it would be innocuous. The very greatest dissatisfaction exists in this neighborhood regarding the faulty construction of the sewers. In some streets, where the water runs up and down, because when a fresh occurs, the pipes being too small to carry away the pressure, allow of the deposit being driven back into the cesspools, where it engenders sickness."

A call was made on Dr. A. J. Davis for a confirmation of the statement regarding sickness being brought about through standing sewage. Conversing on this point and the state of the sewers in the locality, the Doctor said: "I cannot say that I am aware of any sickness existing at present traceable to family sewage. But there is no doubt at all about the wretched condition of the sewers. To live in this neighborhood is to be made amply aware of it, both from experience and from one's neighbors. The main sewer here is the Beatty street, and the sewers in Broad and Kirkwood discharge into it. If my memory serves me right, the Beatty street sewer is

NOT A LABOR UNION.

A Convict's Mistake Caused by Labels Used on Prison-Made Goods.

AN OLD PATRIOTIC TRADEMARK

Clung to, Not for Deception, but for its Good Influence.

HOW PEN INMATES ARE TREATED

A convict in the Western Penitentiary having made a complaint against the management of the institution, including an allegation that convict-made brooms were being marked "Union," a DISPATCH reporter was assigned to investigate the matter. A call was first made at the home of Mr. George A. Kelly, President of the Board of Inspectors. Mr. Kelly was not well enough posted on the arrangements between Lang & Shepard and Warden Wright to light about the features of the prisoner's complaint, but he answered some of the charges of partiality and neglect. "Many of the charges," began Mr. Kelly, "are absolutely false—without any foundation whatever. The prisoners in the Western Penitentiary are served with a greater variety of food than those in any other prison in the country. Our prisoners are all working people, and they are given good, healthy food. Of course we cannot print a bill of fare, but we do everything possible to provide nutritious food, and to serve it in a way that will prevent sickness."

In regard to a statement of the disgruntled convict that where men take sick during the night and the physician has already made his morning rounds, the sick man has the alternative of continuing at work or languishing in a cell until the next day, Mr. Kelly said the hospital situated at the Western Penitentiary is not a cell for sick prisoners between the visits of the regular physician. "As for prisoners working on the new wing," continued Mr. Kelly, "of course they have been put to work there. There is nothing else for them to do, and if we can save money by not working the men, I cannot see why we are not justified in doing so. We have more men now than we have cells, but when the new wing is completed we will be able to adopt Warden Wright's plan, and enter upon a system that will make it a matter of impossibility for a prisoner to deserve the best grade, and the one with which all crowded prisons are troubled will be made a thing of the past."

Mr. Kelly laughed at the idea of Warden Wright discharging a prisoner on his own responsibility, and then proceeded to state how carefully each man's record is considered before he is released. "No man can be discharged," he said, "except upon the recommendation of our Board and the approval of the Governor. The Board of Inspectors holds a special meeting every month previous to its regular meeting. The names of all prisoners whose time is about to expire are placed in my hands, and their records, covering the entire period of their imprisonment, are placed in the hands of the Secretary. These records include a memorandum of all infractions of the rules, such as refusal to obey orders, disobedience to officers, spoiling work intentionally, or fighting, that have been reported to the Warden or Deputy Warden, and the names of all prisoners who have been arrested in the last six months. As President of the Board I call out No. 3607. By referring to the records, the Secretary finds the name of the man who has been discharged. We make a diligent inquiry into all the conditions and circumstances of the case and the general character of the man. We are not satisfied with the man's record unless he has been in prison 10 or 12 years, and the light may have happened five or six years ago. If the man has behaved himself since that time, the chances are favorable that we would not take more than five days from him, although the law would require greater severity. We always take the most lenient view of the law possible."

THE WORK OF PRISONERS.

Warden Wright was seen at the penitentiary. He had seen the convict's complaint. No firm, he said, has the contract for making brooms in the prison. The plant is owned by the institution, and the brooms are sold, not to one firm, but to several firms. Warden Wright described the manner in which the institution is conducted, as follows: "The State puts up our buildings and appropriates a certain insufficient sum for salaries of officers. The various departments are run on a profit basis. The money necessary to maintain the institution, against which is credited the earnings of the prisoners, is made up by the State. The State pays for the food, fuel, and other necessities. The prisoners are given a certain amount of money for their own use. We have always endeavored to find labor least complained of by the public. We have secured the industries, and have appropriated the earnings to plants. As a result, instead of letting out the contract to one firm, we own our own plants and sell the product. "The idea that we hoodwink the public on the broom is most absurd. We stamp all our goods 'convict made,' and the labels placed on them by Lang & Shepard are used to deceive the public. Many years ago, before labor organizations were known, William Marford started a broom factory. He adopted the Union shield as a trademark, and christened his factory after his trademark. The oldest housewife will remember the 'Union' brooms. Some years later Lang & Shepard secured the trademark, and continued to make 'Union' brooms. Lang & Shepard were the only broom makers in the city. They cling to the old name and trademark, and stamp all their goods with both. There is no attempt at an evasion of the law. Although no one intended to deceive, they intended to convey the idea that the goods are made by organized labor."

TASKS OF THE CONVICTS.

The prisoner complained about the tasks in the broom factory being too great. Warden Wright says the day's work is based on what the average man will do in six hours. It takes some of the men seven hours to do the work, but the Warden thinks if there was enough work on hand to make overtime possible, many of them would complete their tasks in much less time. The food complained about was shown to THE DISPATCH representative. It looked clean and wholesome. The cheese which was said to possess great pedestrian abilities was of American make and was fresh. The Warden went to the kitchen to see the man who was making the cheese. He showed no signs of decay, but, on the other hand, were large and toothsome in appearance.

Speaking in a general way about the food served to the prisoners, Warden Wright said: "The food is prepared with the greatest care. In fact, we have recently been considered too particular. Such charges as are made by this prisoner are reflections on the honesty and integrity of the firms supplying us with provisions—as such as to say they supply us with an inferior quality of goods."

THE WARDEN SHOWS THE REPORTER

the plan of the International Prison Convention, held last month in St. Petersburg. The resolution was as follows: "SUGGESTED FROM EXPERIENCE. "Prisoners ought to work, and that work ought to be as much as possible useful and productive, and ought to bear relation to the reform of the prisoners and the betterment of the community. Secondly, as work is chief part of the reforming process of punishment, it ought to rest with the State, and not with private contractors, whose only desire is to obtain as much as possible, irrespective of the benefit it may produce on the character of the prisoner himself. Thirdly, in some cases, owing to the difficulty of the State's organizing

NO SECRET TO LOSE.

Mr. John A. Brashear Says a Telescope Made With Lenses That

COULD BE USED AT ANY DISTANCE

Would be Considered by Scientists as of No Value Whatever.

HOW TO TELL A PERFECT TELESCOPE

"What a blessing it would be to mankind if some inventors could be induced to reverse the time and energy that they waste in trying to accomplish the impossible," was the philanthropic remark made by an astronomical expert, and one of the best posted in the business, Mr. John A. Brashear, to a DISPATCH reporter, yesterday afternoon. "Instances are multiplying of men expending their efforts in useless endeavors; every day one sees from observation that invariably turns out to be nothing," and, leaning back in his chair on the balcony of his handsome residence overlooking Perryville avenue, Mr. Brashear gazed thoughtfully in front of him. The perfumed zephyrs blew sweetly through the suburban air. "My attention was called to a telegram in today's DISPATCH," continued Mr. Brashear, "announcing the death in Syracuse of William Malcolin, who was thought to have in his possession a scientific secret of inestimable value. It is reported that he discovered a method of making telescopes which would give some one rises from observation to proclaim a wonderful discovery, and, leaning back in his chair on the balcony of his handsome residence overlooking Perryville avenue, Mr. Brashear gazed thoughtfully in front of him. The perfumed zephyrs blew sweetly through the suburban air. "My attention was called to a telegram in today's DISPATCH," continued Mr. Brashear, "announcing the death in Syracuse of William Malcolin, who was thought to have in his possession a scientific secret of inestimable value. It is reported that he discovered a method of making telescopes which would give some one rises from observation to proclaim a wonderful discovery, and, leaning back in his chair on the balcony of his handsome residence overlooking Perryville avenue, Mr. Brashear gazed thoughtfully in front of him. The perfumed zephyrs blew sweetly through the suburban air. "My attention was called to a telegram in today's DISPATCH," continued Mr. Brashear, "announcing the death in Syracuse of William Malcolin, who was thought to have in his possession a scientific secret of inestimable value.
