PLANS OF THE NEW MEDICAL PROJECT

PHILADELPHIA, Feb. 15.—A new battle cry has been raised for medical science in the determination of the authorities of the University of Pennsylvania Veterinary Department to attack the seeds of consumption in the animal creation.

The Undertaking is an exceedingly difficult one, as nothing has ever been done in the line before.

A meeting was held at the veterinary department of the university yesterday to inaugurate the new project.

Zell was appointed chairman of the commission, which includes Drs. Harper, Marshall, Williams, Magill, Ridge, Landis and Forman.

The Greenlanders use the milk of the reinder and are never affected with tuberculosis, and the North American Indians and Africans are in every case free from this awful plague.

"Every nation that has domesticated the cow," said Dr. Zell, "is ravaged by consumption, and the greater the amount of the dairy products used by a community the more terribly prevalent is this disease.

The cow responsible for it. The Greenlanders use the milk of the reinder and are never affected with tuberculosis.

"The old adage, 'an ounce of prevention is worth a pound of cure,' is an explanation of the new idea. The plans and details of the commission have not yet been definitely arranged, but when we are thoroughly organized we will gladly give the public everything in connection with the movement."
