

places on the pike. I am innocent of the shooting, which was done by Elmer, while I held the horse and the boy stood guard. Elmer, I believe, will not be easily captured, as he is no security. I didn't. I swear to be a true statement."

NEW METALS MADE.

A Process Discovered for Manufacturing a Manganese Bronze Which Defies Acids and IS STRONGER THAN ALL OTHERS.

A Pittsburger Develops a Material Which Astonishes Those Who Made Tests of It.

NICKEL-STEEL, QUITE HOMOGENEOUS, Also Being Made in an Experimental Plant at Lawrenceville.

A series of experiments into the properties and uses of nickel-steel and manganese bronze, extending over several years, has just been brought to a head, with some astonishing results. A new bronze of extraordinary durability is given to the world, and more light is thrown upon the "nickel-steel" question than at any time previous.

Mr. Harrington's process for making nickel-steel is no less interesting than his manganese bronze, and he exhibited a razor yesterday made from a piece of nickel-steel. It has been used by a barber in the Anderson on a customer. The barber stropped it before beginning operations, and he finished off the man without again using the stop.

The process used by Harrington in the alloy of nickel and steel is the only one, so far as is known, in which refined nickel is used. The metal is also American. All other manufacturers use either nickel matte or nickel oxide. In nickel matte there is copper, iron, and nearly always cobalt. Where the mat is used these minerals are present, and consequently the percentage of nickel used must necessarily fluctuate and remain an unknown quantity until an analysis has been made.

According to Mr. Harrington, the secret of making nickel-steel is to overcome the porosity. It is in nickel matte that the difficulty in the manufacture arises from the fact that nickel and steel are to a certain extent incompatible. They have an affinity and may be mixed, but owing to the nickel being so liable to porosity, in casting it is difficult to combine the two metals and produce a homogeneous material.

Mr. Harrington is well known as the patentee of carbon bronze. He has devoted years of study to the compounds possible from the combination of various metals, and as a result he has at length discovered a metal which is entirely new in development. To this he has given the name of the "Harrington manganese bronze."

Mr. Harrington says that its constituents include copper, zinc, tin, etc., but he refuses to disclose them. He says that the metal is so strong that it is used in the manufacture of boiler tubes, and that it is used in the manufacture of boiler tubes, and that it is used in the manufacture of boiler tubes.

James L. Morgan & Co., manufacturers of machinery, in New York, placed a sample of the metal in boiling oil for six weeks without losing weight or changing structure.

The telephone is a great convenience—sometimes—but it is not often that it is used in preference to face-to-face communication, as was the case in an office in the 61st. Nichols building the other day.

At the Twelfth ward police station yesterday morning 49 prisoners were given a hearing before Judge L. A. Ligon.

Police Magistrate Supt. held the usual Sunday morning hearings for both the West End and Southside. At the Twenty-eighth street station, there were 20 cases.

spikes, like iron or steel. It should be very suitable for submarine uses, as it will not corrode. With all these advantages it is no more expensive than the ordinary commercial bronze, and there is no special selection of materials used in the compound.

MANY USES FOR THE AMALGAM. It is difficult to say what services this new compound may not be requisitioned to perform. Its resistance to acids and its corrosion will make it useful for propellers which, made of steel or brass, are corroded by the sea water, rotting, finally breaking.

There Were No Arrests in Allegheny and Very Few in Pittsburg.

DISPOSITION OF SATURDAY DRUNKS. A spirit of morality seemed to pervade the very air yesterday. The epidemic "struck Allegheny the harder of the twin cities and as a result a clean docket was shown at 11 o'clock last night.

Mr. Harrington's process for making nickel-steel is no less interesting than his manganese bronze, and he exhibited a razor yesterday made from a piece of nickel-steel. It has been used by a barber in the Anderson on a customer.

The delightful weather wooed people to parks and suburbs and it proved too pleasant to tempt men to quit large supplies of the amber fluid to the extent of depriving them of their liberties. There was indeed very little drunkenness all day and police officers had, but little to do, except enjoy themselves.

The police officials at Central station discussed the quietness of yesterday as something of a phenomenon. There was some fear on their part that they might lose their jobs if they kept up, but their minds will probably be disabused on that score.

GOOD RESOLUTIONS IN EFFECT. Saturday night's list of "old-timers" and other unfortunate was not long and as a result the hearings were very short. It seems as though there was a general wave of good resolutions going into effect.

Magistrate Gripp had only 35 cases to dispose of at the Central station, the majority being for drunkenness. The fact that the list was so short was due to the fact that the list was so short was due to the fact that the list was so short.

Speaking of nickel-steel the other day L. C. Burwell, the well-known expert on metals, said he would like to see the alloy used in boiler-making. He thinks it is especially suited for the purpose, because it oxidizes slowly and shows the minimum in porosity. The chief characteristics of the new metal are that it obtains a very high tensile strength, is indestructible by corrosion, being impervious to acids, and that it is used in the manufacture of boiler tubes.

THE FIRES OF A FIRE. Glass Factories That Were Destroyed During the Past Year.

ABOUT HALF A MILLION IN SMOKE.

Pittsburg Came In For a Good Share of the Heavy Losses.

MISCELLANEOUS INDUSTRIAL ITEMS. As the time approaches for the beginning of the new fire in glass houses it is interesting to glance over the record of the past year and note the loss sustained by the various manufacturers as the result of destructive fires.

Name of Plant. Loss. United Glass Co., Findlay, O., \$4,000. Findlay Window Glass Co., Findlay, O., 20,000. Lippencott Chimney Wks., Findlay, O., 33,000. Findlay Flint Glass Co., Findlay, O., 30,000. Jones Cavity Glass Co., Pittsburg, Pa., 20,000. Phillips & Co., Pittsburg, Pa., 20,000. Wolfe, Howard & Co., Pittsburg, Pa., 20,000. Illinois Glass Co., Alton, Ill., 127,000. Lerner Globe Works, Bellair, O., 40,000. Soudell Glass Co., Wheeling, W. Va., 40,000. Warren Glass Works, Uniontown, Pa., 5,000. Malcom Window Glass Co., Fostoria, O., 30,000. Hagerstown Window Glass Co., Hagerstown, Md., 20,000. J. D. Newman, New York, N. Y., 2,000. J. D. Newman & Sons, Royersford, Pa., 4,000. Fairton Glass Co., Fairton, N. J., 4,000. Fairton Glass Co., Fairton, N. J., 4,000. Many Ind., 10,000. Ellwood Plate Glass Works, Ellwood, Ind., 20,000. Craven Bros., Salem, N. J., 8,000. Total, \$467,000.

It will be seen that Findlay, O., lost four factories and Pittsburg came in a good second with three. The first one here was that of Jones Cavity Glass Co., which was destroyed by the cause of the firm going out of business permanently. This indirect loss caused by this fire will be greater than any of the others that have occurred.

The only fire of the year where loss of life accompanied the destruction of the plant was at Wolfe, Howard & Co.'s works, where the master tongs was killed. Besides saying that the next lot victims, have begun to rebuild their factory with the tank system and artificial gas producers.

Of the window glass factories, four—there were eight flint factories, four window houses, three plate and four green bottle-houses. The most destructive fire was at Alton, Ill., where the works of the Illinois Glass company were burned early in the season. It not only caused a heavy loss, but put the firm in a bad shape, as it occurred in the midst of their busiest season, and it required considerable hustling to replace the orders with firms who could get the work out.

Some remarkable work was done in rebuilding the factories, and all those who intend to resume at all will be ready to begin with the coming fall.

FIG IRON ON THE DECLINE. Condition of the Various Blast Furnaces in This District. The production of pig iron during July has just been announced. The principal feature noticeable is the marked decline over the output of June. On August 1 there were 290 furnaces in blast, and the capacity per week was 109,576, as compared with 171,115 on the 1st of June. The coke furnaces have apparently settled down to production at a rate closely approximating full capacity under normal conditions. The increase during the past month has been chiefly among the blast furnaces. From a few sources come to us reports that plants will be kept idle until the market shows a notable improvement.

In the Youngwood district there have been no changes to record. In the Shenango Valley Etna Furnace has gone out, and Keel Ridge will remain idle until the price of pig iron reaches a reasonable level. In the Juniata and Conemaugh Valleys the two Blair furnaces of the Cambria Iron Company have gone out of blast. In the Youngwood district Dunbar started its second furnace on the 14th inst. The Maryland Steel Company have blown in a second furnace at their Sparrows Point plant. In the Hocking Valley Furnace has started after retreating, while in the Hocking Valley production has narrowed down to the output of the Bessemer and Glasgow furnaces, built in blast, and the Akron and Winona. In the Hanging Rock region Belmont ran during a part of July.

Lions as Pets. The late General Stone while in the Egyptian service had a couple of young lions, and his children played with them. They would with pet canines until the beasts had grown to the size of Newfoundland dogs. Even then the great cats continued to romp with the children, but for fear that they might injure some stray natives, bringing about complex diplomatic problems the General had the lions sent away, much to the grief of the young folks.

Prospects for an Early Start at the New Monongahela Plant. Work has progressed so far on the new plant of the Monongahela Iron and Steel Company at Hays station that it is thought operations can be commenced early in the fall. The mill will include 20 single water-steam puddling furnaces, built in two rows, with a 15-foot race and 22 feet between each furnace.

Cal. Stewart, of Sligo, is building the furnaces, and William Reddy is putting down the foundations for the engine and squeezer. The building is entirely of iron, with a high roof and good ventilation. The company has its own coal lands within a short distance of the mill.

Another Government Order. In view of the exhaustive trials made by the Navy Department with the result of demonstrating the superiority and greater tensile strength of nickel steel as a resistant armor for naval vessels, the Secretary of the Navy has contracted with Carnegie, Phipps & Co. for 19 three-inch protective deck plates, upper layers.

The relative cost of these plates, as compared with pure steel, will be studied, and if satisfactory terms can be made this kind of armor will be adopted for the armored cruiser New York and Cruiser No. 12.

No Conference in Sight. Gloomy Prospects for a Settlement of the Window Glass Trouble. There is no change in the window glass situation and the prospects for another conference on the scale are no brighter than they were when the last one adjourned. The manufacturers seem indifferent as to when they come to an understanding, and the men apparently enjoying the prolonged vacation. The workmen, however, say they have little fear as to the results. When the manufacturers are pushed for stock they say they will start, regardless of the scale.

Type-Writers Organizing. A report was received yesterday that the type-writers of this city were to form a union, but no one could be found to verify the rumor. It is known, however, that the type-writers and stenographers of the East and West are organized, and they have in contemplation the formation of a national union.

Engines for Local Firms. Dravo & Black, the local representatives of the Bell Engine Company, Erie, Pa., have sold the Bradrock Street Engine Company a 100-horse power engine. They have also sold two 150-horse power engines to the Pittsburg Plate Glass Company.

Effects of the New Duty. The first shipment of Welsh tin plate imported under the new tariff schedule has just arrived in Chicago. It amounted to 623,380 pounds, and the difference in the duty was \$7,500.

NOT A MARKETER. Why a Pittsburg Lady Buys Her Produce at the Groceries and Butcher Shop—Her Father No More "Economical Than She Was."

Two Ladies met at the corner of Market street and Fifth avenue Saturday afternoon. They were both pretty and stylish, and with the liberties pretty and stylish women are prone to take they usurped the entire corner, for a short period of time, and discussed many things of common interest, as pretty and stylish women always do. The market basket of the younger one afforded a theme for some breezy talk.

"Oh, do you go to market?" queried the one minus the tangible evidence of anything so earthy as marketing.

"Yes, indeed," the maiden replied. "I have done the marketing for the family ever since I left school."

"Well, I purchase the supplies for the house," continued the other, "but I don't go to the market. I was once, when I had an economical streak and wished to become thrifty, like other house wives, but they imposed upon me so that I never have ventured a second time. They know a greasy dealer as soon as they see them, and they have no mercy on them, while the regular dealers have some regard for the future trade of the customer. Besides saying dearly for everything I purchased, and getting the very poorest on hand, a little boy came up and wanted to carry my basket to the car for me. He was a little fellow, but I carried it, for it was getting quite heavy, but the way he sprang the sudden kind of a self-father-no-mother story on me, and when I was ready to pay, he said, 'I don't feel in duty bound to give him four times as much. As a result the marketing trip cost me twice as much as if I had bought my things at the market, and I boycotted the market then and there.'"

"Well," laughed the younger lady, "I have been sort of brought up on the marketing, and I can help you trouble. I can remember when I was a tiny girl, when I went with papa and having to purchase the supplies for the house, and it comes quite fresh to me for a moment with the market people. Mamma thought I was a very extravagant buyer, though, and papa got that idea not long ago, but I soon cured him of it. One morning he said to me, 'Kate, what do you know about the market? Do you know what it is to go to the market with all the money?' I played ill the next day, and requested him to do the buying. When he returned I examined the basket, and he said, 'I don't know what you are doing, I took the first opportunity to say: 'Papa, what in the name of Shakespeare did you do with all the money?' He acknowledged that I was right, and that he had made all my purchases. But I find that provisions are gradually increasing in price, and meat is becoming very much more dear.'"

Learned the Secret. Senator-Governor D. R. Hill Thinks He Has Learned the Secret. Few men know how to take absolute rest, said David B. Hill to St. Louis Globe-Democrat reporter while on the veranda at Normandy-by-the-Sea the other day. I flatter myself I am one of them. Business never has any place in my thoughts when I am in a tent-until resting. I get as far away from State and public affairs as I can, and do not trouble myself to think about anything but how to rest my mind and body. I have always made it a rule not to attend to business while on my vacations, and I think it pays. Of course, important matters demand immediate attention have to be considered, but fortunately there are few such, and my days and nights are spent in getting as much rest as is possible.

It does not require a great amount of effort for a man to learn how to rest. A man doesn't want to learn anything except what interests him aside from business. Some men say as hard on their vacations as they do when actively engaged in business. This is all a mistake. If I did I wouldn't take any vacation at all, because unless a vacation is spent in securing absolute rest, it is a waste of time. I keep the grind without ceasing. I am down here to rest. I don't know anything about politics, and I don't know anything that requires an effort to keep informed about, and I don't want to know, anyway.

The late General Stone while in the Egyptian service had a couple of young lions, and his children played with them. They would with pet canines until the beasts had grown to the size of Newfoundland dogs. Even then the great cats continued to romp with the children, but for fear that they might injure some stray natives, bringing about complex diplomatic problems the General had the lions sent away, much to the grief of the young folks.

Effects of the New Duty. The first shipment of Welsh tin plate imported under the new tariff schedule has just arrived in Chicago. It amounted to 623,380 pounds, and the difference in the duty was \$7,500.

THE WELSH TIN PLATE EXPORTS LAST MONTH amounted to 17,000 tons, as against 46,000 tons in July, 1890. The amount sent to the United States was 4,300 as compared with 37,000 tons a year ago.

A Reduced Export.

The Welsh tin plate exports last month amounted to 17,000 tons, as against 46,000 tons in July, 1890. The amount sent to the United States was 4,300 as compared with 37,000 tons a year ago.

The Lending Dry-Goods House. Pittsburg, Pa., Monday, Aug. 17, 1891.

JOS. HORNE & CO.'S

PENN AVENUE STORES

BLACK and WHITE SALE WOOLEN DRESS GOODS This Morning. Center Table, Middle of Store. GREATEST BLACK AND WHITE BARGAIN DRESS GOODS SALE.

Black and White Checks, Black and White Plaids, Black and White Hair Lines, Black and White Mixtures. All-wool and some are silk and wool mixtures.

1 2 PRICES. All are choice goods. Come to the BLACK AND WHITE SALE.

JOS. HORNE & CO., 607-621 PENN AVENUE.

offered this week:

A 25-piece lot of all-wool FRENCH PLAIDS, good styles and colors, marked from \$1 00 to 25c a Yard.

The finest FRENCH ORGANDIE LAWS were 40c and 45c; all we have now at 25c A YARD.

All-Wool FRENCH CHALLIS, best quality and choice designs, were 55c, reduced now to 25c A YARD.

A 75-piece lot of Dark Ground Chintzes, colored figures, at 8c a yard, were 15c.

A choice line of Fancy Flannels, now 30c a yard, were 50c.

Just a few pieces left of our regular \$1 25 and \$1 50 India Silks, which we are now closing at 75c a yard.

Silk and good Gloria, with slight imperfections, sold at \$3 to \$4.

One lot Corsets at 25c. These are regular 50c Corsets, and are offered at this price this week only. The above lines must be closed. We need the room.

E. P. ROBERTS & SON, FIFTH
