

THE PRISONERS DETAINED.

A Depositor in the Suspended Bank at Irwin Secures Their Arrest.

BOTH BROTHERS BAILED.

They Claim They Felt Safe After Getting Dewalt's Cash.

A \$200,000 SALE OF COAL LANDS.

Bowler, the Second Degree Murderer, Recommended for Pardon.

NEWS NOTES FROM NEARBY TOWNS

SPECIAL TELEGRAM TO THE DISPATCH.

GREENSBURG, Dec. 22.—Upon an information made by James Dewalt, a merchant of Manor, County Detective Alvin this afternoon arrested Bankers P. S. Pool and Elmer Pool at Irwin.

The arrests were accomplished without any excitement. The officer simply read the warrants and then awaited the Pools at the office of Justice Eli McCormick, where they appeared a few minutes later, and gave bail in \$1,000 for their appearance before Justice Keener, of Greensburg, next Monday at 9 o'clock.

Both of them took it coolly, and did not appear to be concerned as to the outcome. Dewalt was seen this evening, and he tells the following:

"On Monday about noon I went to the bank for the purpose of depositing some money. I found a plan of the bank. I asked him as to the condition of the bank, and he replied that it was all right, and that they had lots of money. He said that they had more money than was needed in their business. I was looking for a job, and he said he would give me one if I would deposit the surplus to the Fort Pitt Bank, of Pittsburgh. I saw a large lot of bank bills, which he said they were about sending away, and upon questioning him some further, he said that the bank was in a bank of another city was just the same as a depositor in a home bank. The money was subject to check, and could be drawn when needed."

The arrest of the parties caused considerable commotion in Irwin. The general impression is that there is something radically wrong in the business of the bank. Peter S. Pool, the senior member of the firm and father of Webster and Elmer Pool, enjoys the confidence of the people, and great sympathy is expressed for him. All eyes turn to the sons, who, it is now claimed, involved the bank into its present misfortune.

The Pools emphatically deny any crookedness and have employed able attorneys to defend them. Touching the Dewalt matter, they say that they were depositors at that time that they would have been as efficient as the amount deposited in the bank by Dewalt was \$4,000.

Opinions are divided as to the wisdom of Dewalt's course. A good many of the depositors think the money was not the money of the depositor, but of the bank. Whether other information was made is a matter of conjecture.

A special telegram to THE DISPATCH from Hillsbury says: James F. Riddle, a heavy depositor in the suspended Tyrone Bank, moved suit in the Tyrone court, charging Caleb Guyer, A. B. Hoover, Claude Jones and Patrick Flynn, the stockholders of the institution, to receive the money of the depositors. Other suits are in prospect. Deeds of Tyrone of certain real estate of Caleb Guyer and A. B. Hoover, and other stockholders, were entered on record today.

A special telegram from Altoona says: Recent developments concerning the defunct Tyrone Bank are of a rather startling nature. It was learned that the bank's officers were at Altoona, where they are farmers, who have just learned of their losses, and are crowding the lawyers' offices hoping for some news to their accounts. The liabilities are accumulating rapidly, and are now known to be much greater than at first reported. The present business men supposed to be stockholders are now shown to be not connected with the bank, and it is probable that they will make a statement in a few days, but will say nothing concerning now.

A BUDGET FROM BRADDOCK.

Edgar Thomson: Employers Will Spend A Very Merry Christmas.

BRADDOCK, Dec. 22.—(Special.)—At least \$150,000 will be paid out to the workmen in this immediate vicinity during the present week. The men were paid off in full at the Edgar Thomson today, when \$50,000 were distributed, and it is known that the workmen will receive their pay amounting to \$200,000. All these concerns have hurried matters in order to give their men the benefit of the holidays.

Albert Marshall, a young man working on repairs at the steel railway company has just been closed. The Fort Pitt Glass Company has just been closed. The trouble arose over a strip of land between the farms of Henderson and Orlando Graham. Graham claimed the property, but the court ruled it was a public highway, and insisted on driving frequently over the disputed territory. Last night the court was renewed, resulting in the tragedy. Graham is still at large.

Prospects of a Rival Pipe Line.

CARLEIGH, Dec. 22.—(Special.)—The Crescent Oil Company, which will run a continuous pipe line from Pittsburg to Philadelphia, has just been approved by the Federal Reserve Bank of Philadelphia. The line will run through Cumberland county, and has purchased numerous rights of way. A rival corporation now offers \$5 cash and \$4 per foot for the right of way for another pipeline.

Responsibility for Runaway Damages.

ZANESVILLE, Dec. 22.—(Special.)—Suit was brought against a street railway company here for damages sustained by a runaway. The Court held that the company was not liable for injuries or damages sustained in runaways caused by horses becoming unbridled at the noise of cars running through the streets for which they had secured rights of way.

A \$200,000 Coal Land Deal.

TARENUM, Dec. 22.—(Special.)—One of the largest coal deals ever made in this section has just been closed. The Fort Pitt Glass Company has just been closed. The trouble arose over a strip of land between the farms of Henderson and Orlando Graham. Graham claimed the property, but the court ruled it was a public highway, and insisted on driving frequently over the disputed territory. Last night the court was renewed, resulting in the tragedy. Graham is still at large.

Purchasing a Piano.

A Difficult Task.

A difficult task, when there are so many makes on the market, some good, some bad. But, do you know one from the other? When you want a piano, it is best to go to an old and reliable firm, of worth and standing. We are such a firm; have been in the business for over 50 years, and know something about a piano. A. J. Harnish, Krakauer or Vose piano would suit you exactly. And the price will be right, too. Come and see.

OUT FOR THE STUFF.

Mitchell and Corbett Will Box Six Rounds for Points.

THERE WILL BE A VERY BIG GATE.

The Backers of John I. Sullivan and Slavin to Meet Next Week.

THE PRINTERS ARE AGAIN ON DECK

New York, Dec. 22.—After a vast amount of talk, Charles Mitchell, of England, and James J. Corbett, of California, have signed articles of agreement to meet in a six-round glove contest in Madison Square Garden within seven weeks from to-day. The men met in the office of a sporting paper this afternoon.

Corbett opened the negotiations. The men soon found a common basis for the fight, as Mitchell stuck to London prize rules. It was then agreed that there should be a scientific contest for points, with ordinary sized gloves. The following articles were drawn and signed: "We, the undersigned, agree to box scientifically for six rounds, Marquis of Queensberry rules, at Madison Square Garden within seven weeks of this date."

No money was posted. There will be no stake. Both men seemed agreed to meet the meeting one in which to simply decide who is the more clever of the two men. Among those present besides the Slavins were W. J. Gilmore, Colonel Harding, Arthur Lumley, Ed Earl Brown, Mike Donovan and Karl Brown.

YOUNGSTOWN HAPPENINGS.

Young Hamey Slaking—The Elsteddoff—Some Mysterious Shooting.

YOUNGSTOWN, Dec. 22.—William Hamey, who was shot by the slaking, is being held in a hotel at Middlesex, and his condition is such that death at any hour would not be unexpected. After trephining a blood clot was removed, but the bullet was not found, and it is believed that the brain tissues in the back of the head. The meeting between the mother, Mrs. Paul Nick, and her wayward son was very affectionate. He made numerous promises of reformation should his life be spared.

The twenty-seventh annual Elsteddoff of the Western Reserve Association will be held at the Opera House on Christmas, with Hon. T. R. Morgan, of Alliance, as President of the day. The sessions will be held at the Opera House, with Hon. T. R. Morgan, of Alliance, as President of the day. The sessions will be held at the Opera House, with Hon. T. R. Morgan, of Alliance, as President of the day.

William Oliver, of Niles, came here to marry the daughter of a prominent family. The time arranged for the ceremony the police were attracted to the place by several pistol shots. The bridegroom was shot in the arm, while in an exhilarated condition, drew his revolver and then skipped. The wedding has been postponed until the present and the police are investigating.

THREE M'KEESPOT ITEMS.

An Important Local Extension of the Pennsylvania Lines Probable.

M'KEESPOT, Dec. 22.—(Special.)—The M'Keesport and Reynolds Electric Railway was tested this evening and found to work satisfactorily, with eight new cars, in every way. The Mayor and Council were on hand. Cars will run regularly, beginning to-morrow.

Two special officers from Charleston, W. Va., came here to-day looking for one, Jack Harwin, alias "Harry Halden," who was wanted for several burglaries. They failed to find their man.

The recent purchase of the Charlestown Railway by the Pennsylvania means the building of the new line of the Pennsylvania Company across the country to Sewickley. This is the result for which the late W. L. Scott labored so long and fruitlessly.

NEWS FROM JOHNSSTOWN.

A Dentist Who Flew When Trouble Came, Returns Too Soon.

JOHNSSTOWN, Pa., Dec. 22.—(Special.)—W. E. Hanna, a prominent dentist of this place, was arrested on a warrant charging him with attempting a criminal operation on Miss Gordon, a daughter of Silas Gordon, a well-known engineer on the Pennsylvania Railway. The dentist was arrested about the information against Hanna, charging him with the offense, but the doctor fled to the West and only returned yesterday, under the impression that the affair was to be settled.

Physicians report an alarming increase in the grip in this city. One week ago there was hardly a case here, but to-day 500 are reported, many of them being serious.

Delamater's Aunt Implicated in a Suit.

New Brighton, Dec. 22.—Burgess James Piper, of Beaver Falls, was arrested this morning on a charge of libel preferred by Mrs. Anna Ferguson, of Chippewa township. Mr. Piper gave bail. During the last two years Mrs. Ferguson has been taking care of a daughter of George D. Andrews, an inmate of the State Prison at Johnstown.

Those Funny Sprinters.

MARIETTA, O., Dec. 22.—(Special.)—There was a spirited sprinting match at the fair grounds here this afternoon. The sprinters gave the names S. B. McMillen, of West Union, W. Va., and J. Whitney of this city, although no such names are known here. The dash was 60 yards, and Whitney won by a foot in six seconds. The stakes were \$400 a side. One of the officials of Pleasant county, W. Va., backed McMillen, dropping his money. Immediately after the race all parties took the southbound train on the Ohio River Railroad for their respective homes. It is no clear here to the identity of the sprinters.

They Lost Money.

ERIE, Dec. 22.—(Special.)—The New York and Pennsylvania Baseball Association held a meeting here this afternoon to discuss the affairs of the season were strengthened up and a loss of \$1,200 on the season was provided for. The Erie club made money in the League, but had to pay out more money at the same time.

The County League.

The committee of the County League whose duty it is to revise the constitution will not meet until next week. Yesterday Mr. Harbour, one of the committee, said that the salary system now in vogue will not be changed, and that East Liverpool will likely not be admitted to the League, as the admission will cost more time and money than the League can afford. The percentage system, he thinks, will not be adopted.

A Challenge to Mr. Robinson.

The following communication was received at this office last evening: "I hereby challenge Mr. Robinson to contest against me in a 100-mile go-as-you-please race for \$100 and his highest run. The race can take place at East Liverpool or Pittsburg. My representative will be at the Ohio River Railroad for this contest at 8 o'clock to make a match."

The Billiard Tournament.

In the morning game of the local billiard tournament yesterday Byemer, scratch, beat Gill, scratch, by seven points. The winner's average was 14.50 and his highest run 11. Gill's average was 7.50 and his highest run 11. The evening game was won by Moreland, 20 points, scratch, who defeated Gilchrist, scratch, by 46 points. Moreland's average was 24.25 and his highest run 15. The loser's average was 16.50 and his highest run 7.

A Noted Horseman Dead.

LEXINGTON, Ky., Dec. 22.—Colonel R. S. Strader, one of the best known horsemen in America, died at his home this afternoon, at 6 o'clock, of pneumonia. Colonel Strader was Vice President of the Trotting Horse

BREADERS' ASSOCIATION.

For Ohio Occasional light showers; winds shifting to north; colder Wednesday night.

THE KITE-SHAPED TRACK.

A Civil Engineer Explains Why It Is Speedier Than Others.

R. L. Blakeman, of Lexington, Ky., a civil engineer who has built a number of trotting tracks, says: "What is the scientific reason why a track with one turn should be faster than one with two turns? Because a body passing round a curve is subject to two motions or forces in conflict with each other, one force acting at right angles to the direction of the other. A portion of a horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course. This is because the horse's energy is used in getting forward, and another portion of his energy is used in turning as he goes round the turn. The same amount of force in the locomotive will pull the train faster when the railroad track is straight than it will when it is curved. If a regulation course, which has two turns, is run on a kite-shaped course, which has one turn, then by parity of reasoning a horse will run the kite-shaped course in less time than he will run the regulation course.
