THE FUTURE OF IRON.

Leading Manufacturers and Experts Review the Situation.

STEEL IS GROWING IN FAVOR,

But as Yet the Other Product Is Fairly Keeping Pace With It.

FIGURES THAT ARE OF INTEREST NOW

While it may be true that "there is nothing like leather," yet it would seem that, for some purposes, iron is also equally in-dispensable, notwithstanding the alarming intimations lately thrown out that some 5,000 or 6,000 puddlers and as many helpers would soon find their occupation gone on account of the encroachment of steel making. It does not seem that any rhapsody is necessary to prove that iron is the most useful of all minerals, as, notwithstanding the intrusion of its partially decarbonized relative, there was more iron made in the United States last year than ever before.

Many people in the business were asked during the past week what they thought of the tuture, but most of them evaded with maiden coyness an answer, and actually some manufacturers didn't seem to know anything about the matter, and more than one affirmed positively that he knew not the extent to which steel had taken the place of iron. Now there is some excuse for this ignorance on the part of some whose sole object is to get product sold, as it appeared on full investigation that while steel had invaded iron manufacture to more than half its volume, yet the manufacture and consumption of the latter during late years has been so great that iron makers have had all they could do anyhow.

The Increase of Furnaces

Mr. Joseph D. Weeks states that if the puddler's occupation is vanishing the decadence must be quite recent, and cites figures to prove his position. Thus in November, 1887, there were 4,882 puddling furnaces in operation; in November, 1889, 4.914, and in January of this year 5,120, so that while the abolition of several score within a week or two may be a significant symptom of future readjustment it has not yet made any material difference.

It is quite evident that for many pur-poses steel will displace iron, and of course make inroads on the puddling industry to an extent that will injure it materially if the growing volume of trade in wrought iron shall be arrested. To make steel requires a better quality of pig iron than for making muck bar, and of course costs mo but the difference in cost of making steel and muck bar is great. The conversion of pig iron into steel ingots cos's, say \$2 to \$2 25 per ton, and this includes cost of

keeping furnaces in repair, while the cost of puddling alone is \$5 50 per ton. M. K. Moorhead, President of the Moorhead-McLeane Iron and Steel Company, stated that he did not expect to see iron displaced to an extent to injure workers materially, as it is probable that the demand for gas pipe and wrought iron pipe for other uses will grow rather than diminfor other uses will grow rather than diminish, and in this connection it might be stated that while the wrought iron pipe industry may receive checks from time to time, the demand for such pipe is constantly spreading over a wide area, and manufactured gas will be the fuel of the intermediate future—between the time when electeric heating shall come or scientists discover a way to store solar heat.

Effect of the Use of Gas.

The utilization of natural gas goes far to explain, in the absence of satisfactory statistics, why it is that while steel working has grown from a comparatively insig-ficant part of metal working to 6 per cent of its entire volume in the United States, the iron output has grown also to proportions greater than known in times past. Old people can remember a time when the entire iron manufacture of the world could not have suppled the wrought iron pipe used in the past eight years. It was thought a few months ago that these hundreds of miles of wrought iron pipe would be junk in a short time, but that opinion is not entertained at present, even though the expectations of fuel gas manufacturers may not be so sanguine at present as they were

There are still many cases to which iron is put and probably will continue to be put for generations to come. Assistant President Garland, of the Amalgamated Association of Iron and Steel Workers, states that while he cannot tell the present relation between the iron and steel output, statistics taken prior to July last showed that 39 per cent of the business of the country was iron and 61 per cent steel, and yet the iron output of last year was the greatest to date in the United States, so that steel mak-ing does not seem to be displacing iron making, though the growth of steel manu-

facture is much greater than that of iron.

Between the reticence of some who should be authority and the contradictions of others it is difficult to get satisfactory figures as to displacement. Structural work is largely made of steel, and hoops are now rolled out of steel to a large extent, but it is said that blacksmiths cannot be induced to use steel shoes for horses, and a horse fancier states that he would not allow a horse to be shod with steel shoes, as he says steel will not conform with motion as iron does.

One Feature for Consideration He urges the same objection that is made to metal railway ties. Wooden ties accom-modate themselves better to the swaying motion of heavily laden trains than do metal ties. In the latter case the mother of invention will come to the rescue after the earth has become bald. It is also said that steel shoes polish and become slippery. It is said by some that owing to the oxida-tion of steel being greater than iron, it is not good for rails in coal mines, but others say the difference in corrosion is inappreciable. Since steel rails can be put on the market 25 per cent cheaper than iron, it

would seem strange that any iron rails would be made, unless there were some special adaptability in them to certain ex-igences not found in steel. Not exactly in the same line, but pertinent, are the observations of George H. Thurston on the policy Pittsburg iron makers should pursue in order to make this city the seat of the iron industry, rather than the nursery thereof, sending out colonies from time to time to subsist at the expense of the parent hive. Mr. Thurston regards the policy of Pittsburg iron makers in the past as one of cutting their own noses off. He says they once controlled the nail manufacture of this country, but rather than yield to once controlled the nail manufacture of this country, but rather than yield to the inevitable allowed factories to be built in other places until competition has run
the mother out of business. Mr. Thurston
argues that smaller profits, though it were
necessary to double or trebble the output to make business pay, would have been good policy. He held this doctrine a quarter of a century ago, but more manufacturers be-lieve him to-day than did then.

Competition From the South. As to Alabama competition, Mr. Thurston says it will not hurt Pittsburg if the manusays it will not hurt Pittsburg if the manufacturers have the nerve to compete. A poor quality of iron can be made very cheaply in Alabama, but the manufacturers there have learned by experience that they cannot at present get the ores necessary for mixing in order to put out a product that will compete with that of this city, but if the letter be content to stand on patters and the stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter be content to stand on patters and the letter becomes the stand on patters and the letter becomes the stand on patters and the letter because the letter the letter because the letter be the latter be content to stand on natural adthe latter be content to stand on natural advantages, as in the case of rail-making competition, there may be further loss. Mr. Thurston observes that the law that regulates the rise of water controls manufacture as well and that advantages and disadvantages are generally associated, but a trade firmly established in a section furnished with its just medicate of advantage can only be arrested. modicum of advantage can only be arrested by superior pluck and skill. It is better to bend a little and do more work for the same

money, just as farmers must do about every alternate year.

Some people imagine that to be a successful farmer all that is necessary is the possession of physical power and industry, but the only successful farmers are students. A potato raiser on the shore of Lake Erie was asked how he became rich when his fellow potato raisers could barely keep out of the claws of the sheriff. He replied that he kept his ground in such shape that he got a full return from it; had 40 acres of potatoes when they were 60 cents a bushel and only 20 acres when they were 60 cents a bushel and only 20 acres when they were 30 cents, but always took care to have enough to supply the people who depended upon him therefor. He said he had during 40 years' observation learned that a year of low prices discouraged growers, and in consequence he put out all his energy to have a good crop the year following low prices, "but," said he in conclusion, "there is no good comes of repining. Potatoes are my crop, and when I needed a certain amount of money during a year prices were certain to be low, I planted sufficient acreage to make it. I'd rather borrow money from my farm than from the money lender." rather borrow money from my farm than from the money lender."

DEATHS HERE AND BLSEWHERE.

Ex-Alderman Wilson.

Henry Wilson died Monday afternoon at his residence. Elwood, Castle Shannon Railroad, aged 68 years. Some years ago the deceased was a resident of the Eighth ward, this city, where his great popularity led to his election to the office of Alderman by an immense majority. Many of our old citizens will remember him when he occupied an office on Fulton street, where his administration of justice was characterized by the strictest integrity and impartiality. As a private citizen also, he was greatly esteemed by the entire community, and dearly loved by an extensive circle of close Friends. The death of so good a man as Henry Wilson is no ordinary loss, and the thousands of our people who knew and admired his goodness of heart and his keen sense of right and justice, will sincerely regret his demise. He leaves a heart stricken widow, who has the profoundest sympathies of many friends in her sad affliction. Henry Wilson died Monday afternoon a

Elizabeth O'Neil Christy.

Elizabeth O'Neil, wife of Harry L. Christy, the well-known young attorney, died yesterday at her home in Oakland on the 20th annivery of her birth. Mrs. Christy was a daughter of the late John W. O'Neil, the great coal man, and Harriet R. O'Neil. Mrs. Christy was a daughter of the late John W. O'Neil, the great coal man, and barriet R. O'Neil. Mrs. Christy was well known both in church and social circles and had a large number of friends. The funeral services will be at her late residence, Darrah and Terrace streets, at 10:30 to-morrow morning. The interment will be private.

Captain M. H. Butler, Lecturer. died in Boston Monday. He was well-known in Knights of Labor and Nationalist circles as a writer and a lecturer. During the war he served in the United States Engineers and left the service with a Lieutenant's commission. Afterward he accumulated a large fortune in the oil regions, which was partially lost in warfare with the Standard Oil Company. Captain M. H. Butler, of Tidioute, Pa.

Hop. C. W. Clancy.

Dr. C. W. Clancy died at his home at Smithfield, O., Monday evening of an apoplectic fit, superinduced by long and severe illness. He was born in Morgan county, O., and served in the liste war, reaching the rank of colonel at the time the war ended, when he resumed practice as a physician. He was elected Representative on the Republican ticket twice by large majorities.

Obituary Notes. JAMES H. BUSELL, inventor of shoe manufacturing machinery, died in East Boston, Monday, aged 50.

HENRY MULLIN, for many years past a promi-nent citizen of Monongahela City, died there yes-terday, aged 91 years.

ferday, aged #1 years.

GENERAL JESUS TOLEDGO died in the city of
Mexico Monday morning. Forty-seven Mexican
Generals have died since February 7. MRS. ANNIE E. SEMMES, the widow of the late Admiral Raphiel Semmes, commander of the Con-federate cruiser Alabama, is dead at her home in Mobile in her 74th year.

DINAH HOGAN, aged 115, died at Otterville, Mo., Tuesday. She could remember being brought from Africa when very young. She was a slave of Gen-eral Hogan, of Peters county, Mo. AUGUSTUS HICKS died at his home in Ashland, South Scitante, Mass., Sunday, aged 101 years and Il months. He had been fairly active until within a few months, but had been failing for the last three months.

LOUIS W. SINSABAUGH died at his residence in Washington Monday. He was formerly a resident of Zanesville, O., and was appointed to a place in the Patent Office several years ago. He recently resigned and has practiced patent laws. DUCHESSE DE VALMY died Monday at Paris, aged 50. She married a son of the famous General Kellermann, and by her second marriage with Cointe de Caux she had a sen, the Marquis de Caux, who was the first husband of Mine, Patti.

on Saturday of animis at his home, Brooklyn, aged 64 years. He was born in England, but came to America when a boy with his father. He published "Ashcroft's Hallway Directory" and was the inventor of 60 patented mechanisms.

An Honest Statement.

The following is self explanatory and is but one of many unsolicited testimonials re-ceived: "After examining the sample of Klein's Silver Age Rye Whisky, I most unhesitatingly pronounce it a first-class arti-cle, and consequently a most desirable stimulant for medical purposes."
