In society Oakland bears the soft impeachment of being the most popular place for an eligible maiden to live. She need not reside there very long before she has many a chance to change her name and often her place of residence. Where to lay blame for this lavorable condition of affairs is a mystery. The girls are not any prettier nor richer, though their wealth and beauty is not to be scalled at, than they are elsewhere. It is even said that so important has this plea-ant fact grown that house agents have mentioned it to house-hunting papas with numerous daughters.

The vacation season is over now for the churches; for the Oakland Methodist Episcopal will be the scene of the first wedding of the season-that of Miss Elizabeth Frew and Mr. Phinips.

A few weeks ago not a summer resort in the constry but was preaching of its merits as a retreat from warm weather. Now ap-plication of the same truth is being made with the word autumn introduced. This is the consistency of inconsistence. There was a man who used to drink whisky in the winter to make him word, and whisky in the winter to make him word, and doubtless he and the summer resorts are blood relations. Dr. Ring, of New York City, is visiting Mr. Max Becker's tamily at their Ells the country but was preaching of its merits

week one of the great successes of last sea son. "The Struggle of Life," with all its scenic spiendor, was then voted one of the

strongest and most interesting comedy-dumms that has been produced in recent years, and Manager Gulick was compelled to book the attraction a ain in response to reprated demands of those who had already seen it and many more who had not. Since reprinted many more who ind not. Since it was here last Walter Santord, the well-known manager, has taken charge of the piece, and with the ass stance of William Haworth, the dramatist, worked it into stron er and better shape than ever. The result is that "The Strug, leot Li e," with its added comedy episodes is brighter and more attract we thin ever. It is a great scenio production, two large cars being required to carry the scenery. Among the stage pict-ures that are novelties and have created a decided sensation are lattery Park in win-ter, Rut er's slip in a snowstorm, exterior of St. Patrick's tathedral, a dive scene in Water street, New York, and the recue from a sewer, with real water and solid brick wa is. A very strong company has been en-gaged and Mr. Haworth has rehear-ed them carefully. There is every indication that the production of "The Strugge or Life" at the Bijon will be a notable one.

HEIGHT OF ADAM AND EVE.

Carlous Speculation as to the Proportions of Our 'nestors.

"I have often wondered where M. Henrion, the French savant, got his data for the curious speculations he gives as to the height and other proportions of Adam and Eve," says a writer in the Philadelphia

Press. "In his remarkable work. "The Degeneration of the Human Race,' published in 1718, the learned academician gravely in-forms his readers that Adam was 123 feet and 9 inches in height, while his disobedi-ent consort was but a paltry 118 fret from the sole of the foot to the crown of the head. "The Talmud has this to say of Adam's height: 'He was so tall that he stood wit feet on earth and head in heaven until after God pressed him down at the time of the fall.' Rabbi Jhudi says that when he lay on the earth his body completely covered it. "Another Talmudie story says: To judge how long he was, understand that his body stretched from one end of the earth to the stretched from one end of the carth to the other, and it takes a man 500 years to walk that distance. * * * The angels were awed with wonder when they saw that gi-gantic human being, and bowed before him erying: 'Holy, boly, holy,' Then God re-duced his size by cutting off great chunks of flesh.' These are all absurd legendary stories of course but where did Henrion ne-h. These are all absurd legendary stories, of course, but where did Henrion get his figures for the 123-foot calculation mentioned in the opening of

Some of the Southern Waters There is a plant growing in the Southern

waters of the United States which possesses the singular property of being able to render the most impure standing water perfeatly healthy, says a writer in the St. Louis Giobe-Democrat. The people of Louisiana

and Mississippi call it the water lotus. It consists of leaves about the size of the head of a pin, and roots so fine as to escape notice save under a microscopic inspection. Where it grows at all, it covers the water, and to the casual observer looks like a coating of green scum. The flowers and seeds are micro copic, so that its appearance in any given locality is not readily accounted tor, but wherever it does appear the water beneath is always fit to drink.

So marked is this property that families using the water from bayous where the lotus is abundant are known to have better general health than those taking their drinking water from places where the lotus is not found. It is often transplanted into ponds, bayons and lakes, spreads with wonthe purpose.
