last decade, and this building and its ex-hibits may be declared a monument to men

T, one portion being 500 feet long and the other portion 200 feet. The building cost \$618,000 and is so planned in its details as to give all the acdations desired by the farmers. It is a single story structure and of a design designated as the heroic by the architects. The main entrance to the Agricultural build. ing is 64 feet wide and the rotunda is 100 feet in diameter and surmounted by a class dome that sheds a daylight clearness on all exhibits. Waiting rooms, committee rooms and the bureau of information are located on the first floor, and broad stairs lead from this floor into an assembly room, having a capacity of 1,500, which is intended for the congresses of farmers, Farmers' Mut-ual Benefit Associations, Farmers' Al-liances and kindred rural organizations. In the Agricultural building will be exhibited all products of the soil and also agricultural implements and machinery of all kinds. An ogricultural experiment station in operation will be one of the most interesting features of the exhibit, and the products o irrigation and sections will also be awarded a conspicuous place. The Horticultural Building in Taste. The Horticultural building and its enorm ous dimensions of 1,000 feet long and its enorm-ous dimensions of 1,000 feet long and 286 feet wide are only another evidence of the prominence assigned to the kindred indus-tries of the soil. In the list of buildings, all assigned to closely allied occupations, are the Agricultural, Horticultural, For-estry and Dairy buildings, nearly all of which in past world's expositions have been enclosed beneath a single roof. The Horti-cultural building of the World's Columbian Exposition will cost about \$400,000, and its entire floor space is over 614 acres. The ex-terior of the building is of staff or stucco of a warm buff and on the roof of the building, around the central dome, an elaborate display of roof-gardening is seen. In front of the building is a flower ter race for outside exhibits, including tanks for nympheas and victoria-regia. A low parapet in front of this terrace borders the water and at the center affords a commodi-ous boat landing. The plan of this building is a central pavilion with two end pavil-ions, each connected with the central pavilion by front and rear curtains, forming two interior courts, each 88 by 270 feet. These courts are beautifully decorated in color and planted with ornamental shrubs and flowers. The center pavilion is rooted by a crystal dome 187 feet in diameter and 113 feet high, under which are exhibited the tallest palms, bamboos and tree ferns that can be procured.

a separate building. The Agricultural building is an attractive structure 800 feet long and 500 feet wide and has a floor space of nearly 19 acres. It stands quite near the lake shore and in form resembles the letter

The pride of the World's Columbian Ez-position in point of architecture is the Ad-ministration building. It occupies the most prominent position in the park and is exactly square, being 262x262. Its height is even greater than its rectangular dimen-sions, being 277½ feet. This building cost \$435,000, and in proportion to its size is the most expensive structure of the Exposition. It is erected in the form of four pavilions, 84 feet square, one at each of the four angles of the square and connected at the center of the square and connected at the center by the great dome, which is 120 feet in iameter. The architectural design of the Administration building is in the style of the French renaissance

presses to supplement the exposition at will be made of the material progress the world by a portrayal of the achieve ments in science, literature, education, gov ernment, jurisprudence, morals, charity, art, religion and other branches of mental activity. George R. Davis, of Chicago, is director general of the entire Exposition and therefore is chief executive officer. In the Joint Board of Control is of course vested the actual management and from the verdict of this board there is no appeal. The financial situation of the World's Columbian Exposition at the present time is most satisfactory. The recent appropriation of Congress, quickly followed by the sale of \$4,000,000 debenture bonds, place the enterprise in a position to meet any ex-pense to be incurred before the opening of the gutes. The World's Columbian Exposition is to

cost three times as much as any previous exposition in the history of the world; it occupies about four times as many acres. and has about twice as much space under root as the greatest of former expositions No exposition of the past has ever received the support of more tuan one-third the nations of the world, while the Columbian Exposition has received recognition and applications for space from every civilized nation of the globe.

Thirty State Buildings Already There.

The true magnitude of the World's Columbian Exposition can only be realized when it is stated that, the United States not considered, the space already allotted to foreign nations alone exceeds the total space of any previous world's fair. In addi-tion to this will come the space of American exhibitors, which far exceeds the aggregate of all the foreign nations of the world. Nearly every State in the Union has made appropriations for State buildings and State exhibits, and there are already under construction no less than thirty State buildings on the grounds,

The World's Fair site is in Jackson Park and Midway Plaisance, about six miles from the center of the city of Chicago, and 1,037 neves is embraced in the site. This is nearly four times the area of any previous exposition, and the number of square feet under root, over 5,000,000, is nearly twice as much as the greatest exposition of the past. The beauty of the location of the buildings of the World's Columbian Exposition is that nearly every structure fronts on the lake, the entire eastern limits for a mile and a hult being washed by the shores of Lake Michigan. In the northern portions of the park are grouped nearly all the State buildings, the Fine Art Building and the various structures of foreiga nations.

Next comes the Fisheries building, which is situated just north of the legoon, and directly west of the Fisherics building on the opposite side of the park, stands the Woman's building. South of the Woman's building and on the same side of the lagoon, which parallels the lake, are the Horticultural building and the Transportation building. To the southward of of the lagoon and bordering on the lake, is the giant structure of the Fair, the Manufactures and Liberal Arts building. South of this edifice is the great pier, for lake steamers, extending 1,000 leet into the lake and on one wing of which is the Music Hall.

A Pen Sketch of the Whole Affair. All down this grand avenue, encompassing a beautiful sheet of water, stand imposing buildings along the majestic facades of which sweeps the gaze of the visitor until it rests on the Administration building pearly a mile distant. West of the Agricultural building stands Machinery Hall, which is its equal in size and is especially rich in architectural lines and details. To the northward of the Administration building on either side and facing the grand gyenue stand two more immense buildings, one for the electrical and the other for the mining exhibit. Near by is the wooded island-a delightful gem of primitive na-ture-in striking contrast with the elabo-rate productions of human skill which sur-round it. In the southwestern portion of the grounds are the great depots, the numerous railway tracks and the stock fami-lies. The Forestry building fronts the building are built separately of Iron and

prevail, is calculated to harmoniz with the intended use of the building. The interior decorations, moreover, have been designed especially with a view to the artistic lighting, which will be one of the main features of the exhibit. Four hundred and fifty are lamps for the general illumination of the building, or one lamp to every 50 feet square of space, and 10,000 or more incandescent lamps besides all of the special efforts of lighting among the exhibits, will make the building a veritable blaze of light. But electricity, as exemplified in the exhibits and in its power for usefulness, does not end with the electricity building. Its application begins at the mammoth power house situated in the Machinery Hall and extends by means of wires to convey light, heat, power and signals to every part of the grounds and all of the buildings and it then

goes outside the grounds by means of the telegraph and telephone to all parts of the world. This great power plant is to in-clude electrical machinery aggregating 24,-000 horse power. Steam will not be allowed world. in any part of the grounds or in any of the buildings excepting at this central power station. All power at other points will be by electrical transmission. The machinery of exhibitors in all the other departments will

be driven by electric motors, 4,000 to 6,000 electrical horse power being supplied for that purpose. The grounds and buildings will be lighted by electricity, 7,000 arc lamps of 2,000 caudle power each and be-tween 100,000 and 150,000 incandescent lamps. The general illumination in all the buildings will be by arc light excepting in the art galleries, the Woman's building, the Administration building and some of the State and Foreign buildings. In these exceptions the lighting will be by incandescent lamps.

The elevated railway which will traverse the grounds of the Exposition, will be operated by electricity, the boats of the omnibus line, which are to ply the waters of the lagoon and the inner harbor, will be operated by storage batteries, many of the passonger and treight elevators in the larger buildings will be electrically propelled, the great central iountain in front of the Administration building will be operated by electricity, and the two spectacular fountains at either side of this will also be electrical.

> The Art Building a Beauty. The most substantial building of the

World's Fair and the one likely to remain a permanent structure in Jackson Park i the Art Building. It is the only fire-proof building on the grounds and great pains have been taken to notify and assure Euro-

pean art exhibitors that their treasures would be secure from any possible conflagration that might break out during the ex position. Of a Grecian-Ionic style which will receive as much artistic praise as the exhibits on the inside, this building of classic architecture has been constructed at an expense of \$670,300. It is 500 feet long and 320 feet wide and has two annexes each of which is 200 by 120 feet. The floor space the lagoon and bordering on the lake, is one-halt acres. Of oblong structure, the Art building is intersected, north, south east and west by a great nave and transept 100 feet wide and 70 feet high. A coloss winged figure of Victory surmounts the dome, and the corners made by the crossing Extending westward from the pier is a long avenue several hundred fect wide. small picture galleries. Sculpture is to be displayed upon the main floors of the nave

and transept, and paintings and panels in bas relief will be exhibited on the ground floors of both the galieries. Outside gal-leries, 40 feet wide, form a continuous promenade around the classic structure. Machinery Hall and Its Expanse.

The inventive genius of the closing decade of the century is to be displayed in Ma-chinery Hall; and when this building is open to visitors its interior will be one great maze of moving machinery. It is located at the extreme south end of the grounds and in the center of the park from side to side. Over 800 feet long and 500 feet wide, with an annex of 550 feet in length and 490 feet in width, this vast structure cost \$1,200,000, and has a floor space of over 17 acres. One of the features of this building is that the vast arched

Dairy, Forestry and Fisherles.

The broad acres of the Western farm, the dairies of New England and New York and the centuries of experience of the hereditary dairymen of Switzerland and the Old World are to be brought into close competiworld are to be brought into close competi-tion in the Dairy building, which is 200 feet long and 100 feet wide and has been con-structed at a cost of \$30,000. The most novel of all the World's Fair

buildings in its construction and design is the Forestry building. It is almost incred-ible to conceive that a building 500 feet long and 200 feet wide can be built without a nail or an ounce of metal in its construc-tion, yet this feat has been accomplished in tion, yet this feat has been accomplished in the Forestry building. This is a structure, too, which in point of strength is one of the strongest buildings on the ground and its location on the very verge of the water makes it necessary for it to withstand all the strength of the fierce lake winds that manual all the strength of the fierce lake winds that prevail all the winter. The rustic is nat-urally the idea which has been uppermost

urally the idea which has been uppermost at all times in the construction 'of the For-estry building and the effect accomplished is one certainly difficult to surpass. One of the most unique structures of the World's Fair is the Fisheries building. Erected at a cost of \$224,000, this building with its two annexes has a floor space of over three acres. This building with its annexes is 1,100 feet long and 200 feet wide and is situated on the east side of the large island in the extreme north of the lagoon.

and is situated on the east side of the large island in the extreme north of the lagoon. Of course rocks, mosses and lichens consti-tute a large portion of the decorations and furnishings of this building. The substan-tial structure of the Fisheries building is composed of wood, iron, steel and glass, staff as usual being used for the outside The Woman's Building a Neat One,

The architecture and decorations of the Woman's building have been entirely planned and carried out by women, as the theory is to show their advancement m

ing north and south, there is a preistyle 60 feet wide and 500 feet long, spanning the entrance to the big lagoons. Beneath this pleasure craft can enter from Lake Michigan and sail throughout the . Fair on the waters of the lagoon. The Music Hall, 200 feet long and 140 wide, is at the north end of this preistyle and contains an auditorium capable of seating 2,000 people with room for an orchestra of 75 pieces and a chorus of 300 persons. The finest music of the world will be heard in this building; its mission eing to afford a hall for the fine singer and instrumental musicians who desire to gather here before an audience of their own undred professions. The great public concerts will be held elsewhere in an amphiheater ample to accommodate 15,000. The ost of these structures was over \$200,000. A pier extending 1,000 feet into Lake Mich-igan with a tower 250 feet high at its extremity adds peculiar interest to the whole design. The larges electric search light in the world will be placed at the top of this tower and will afford magnificent displays at night. Among the other World's Fair structures

of interest is a reproduction in staff of the Convent of La Rabida. It was at this convent in Spain that Columbus sought shelter and found willing listener to his dreams in Father De Marchens, the prior of the institution. The latter finally obtained for Columbus a reception at the Court of Ferd-inand and Isabella, and the great western voyage and the discovery of a new world were the results. Multitudes of other buildings of less importance adorn the grounds. Midway Plaisance is given up to a reproduction of Egyptian streets, African villages, Arabian camps and many other con-ceptions emblematic of foreign life and oreign countries.

Various Handsome State Buildings.

In addition to the great structures above described, nearly every State in the Union has in course of construction a separate State building for the exhibition of the characteristic industries and resources of the State.

The Florida building is a representation of oid Fort Marion; the Iowa building is a "blue grass palace;" the Massachusetts de-sign is the historical "Hancock House," of Boston; Maryland reproduces in granite the Soston; Maryland reproduces in granite the State Capitol building; New York's model is the old Van Rensselaer residence of New York City; North Carolina reproduces "Tyron Palace:" Pennsylvania gives us "Independence Hall," even to the old "Liberty bell" in the rotunda and the 25-ford dia shock in the stranks South Dafoot-dial clock in the steeple; South Da-kota's model is an old French farmhouse; Texas follows the design of an old Spanish mission; Wyoming adopts the outline of a French chateau, and the Territory of Utah erects a salt paince from the deposits of the Great Salt Lake,

Up to the present time the total amount appropriated and collected by subscription for separate State buildings and State ex-hibits aggregates \$4,746,000. It is esti-mated that the total expenditures of the World's Columbian Exposition from all sources, national, State and foreign, will aggregate the enormous sum of \$40,000,000. If this estimate be correct, the cost of this exposition will be nearly six times as great as any previous exposition that the world has ever known.

GENERAL MARKETS.

Minnenpolis-Minnenpolis had the distinc-tion of being the only board to hold a ses-sion, but they adjourned an hour ahead of the regular time. There was only a little jackthife trading done in the pit, and of course under the conditions an advance was out of the question. December opened at 6% c and closed at 6% c. May opened at 73% c and closed at 75% c. A here were only two or three trades made. Good business in the cash warket, No. 1 Northern soid principally t 6% c. Di cars going at that price; the next ingest sale was 55 cars at 6% c. Heccepts of wheat here were 525 cars. Hange of prices-May, opening 75% c. highest 75% c. October closed at 6% c. yesterday, 6% c. On track: No. 1 hard, 7% c. 1 Northern, 6%; No. 3 North-ern, 6% c.

WHERE there are children, there Dr. Bull's Cough Syrup should be always handy.
