Maricultural.

[From Blackwood's Edinburgh Magazine.] Honor to the Plaugh. Tanton clouds o'creast our native sky, And seem to dim the sun, We will not down in languer lie,

Or deem the day is done : The rural arts we loved before No less we'll cherish now ; And crown the banquet, as of yore, With Honor to the Plough.

In these fair fields, when reaccful spoil To faith and hope are given. We'll seck the prize with honest toil, And leave the rest to Heaven. We'll gird us to our work like men Who own a holy yow.

And if in joy we meet again, Give Honor to the Plough.

Let Art, array'd in magic power, With labor hand in hand, Go forth, and now in peril's hour Sustain a sinking land. Let never Sloth unnerve the arm,

Or Fear the spirit cow ; These words alone should work a charm-

All Honor to the Plough.

The heath redress, the meadow drain, The latent swamp explore, And o'er the long-expecting plain Diffuse the quickening store : Then fearless urge the inrrow deep Up to the mountain's brow, And when the rich results you reap, Give Honor to the Plough.

So still shall Health by pastures green And nodding harvests ror And stitll behind her matic screen Shall Virtug find a home ; And while their bower the muses build Beneath the neighboring bough, Shall many a grateful verse be fiil'd

With Honor to the Ploush.

Work for Beember.

Having arrived at the opening of the last month in the Calender, it may be profitable to take a retrospective view of our farm operations : during the preceding part of the year. By scruunizing what we may have done ; looking closely into all our proceedings connected with our business; by comparing results, by minutely examining into the various modes of culture pursued by us, as well as those adopted by us in our improvement of the soil, and noting the cost and effects produced, we may not only be able to arrive at something like a definite opinion as to the value of our labors, but discover wherein these labors have been fruitful, or barren of reward ; detect errors if any may have double the weig'st. If beets be substated, id been committed, and correct them in fature .--By resorting to this retrospection, if we will long practice qualifies us to make ; we may be enabled to improve upon our former modes, and thus introduce a more judicious system of culture ; one having for its object the melioration of the soil upon those principles of agricultural physiology and enlightened economy, which look alike to the permanent improvements of the arable land, and the securement of the greatest amount of good with the least expen- nutricious food for sheep-so also are corn- (Counterfe diture of labor and means. These objects should color ground fine and moistened. greatest amount of good with the least expenalways be held in active appreciation by all husnandmen who desire to be successful as it is of a truth that there is no class of society more dependent upon the excercise of far sighted economy than they are for the acquisition of meal and 3 lbs. straw. those elements of wealth, which vouchsafe generous hospitality which bring neighbors to straw as the case may be. gether upon the platforn of brotherhood, and What food will produce the most wool ! Peas

of mucus from the nostrils, while many died from no other cause, apparently, than sheer poverty of condition. Since, however, his moment, as the loss has been mostly among diminutive spring tambs-so from bad nursing, and old ewes which, from superiority of fleece or corease, were remained thus long, to breed

> Protection materially increases the weight of the flerce and improves its quality. The comforts of shelters enables the animal the better to retain its flesh, as also to require accessions and a consequence, to increase its flecce, as the serre tions which produce thish and the fluids which imimpart growth to the wool all proceed from the same source.

sure were such as scab, pell, rot, dysentery,

But as facts are more reliable than theory, we will state that the flock of the writer increased in weight of fleece, by shelter, from 21bs. 5 oz., to 2 lbs 9 oz. to 3 lbs. 2 oz., making an aggregate difference in the weight of the wool of his flock of 2000 pounds. The wool to is greatly improved in softness, as also in the soundness and evenness of the fibre, properties which tend mush to chance its value in the market. The superior condition of the ewes, induced by the comforts of shelter, materially increase the num-

ber of the lambs. Shelter Suces Provender, as anima's consome less food when exposed to the incomency of the weather ; under the latter circumstances a large portion of their food, by the law of necessity existent in animal commy, being appropriateb to mapose of heat, which under the former condition would have gape to the production of

Sheep .- As the wool business has become a ualess destroyed by the sucidal poncey of our i dition. hw makers, we shall give a few brief directions with regard to the "winter management" of sheep. And in what we shall say me wish it disunctly understood that we are only presenting a brief abstract of those rules laid down in that published in 1845, by L. A. Morrell, who is bimself one of the most enlightened sheep breeders in the country, and whose book should he in the possession of all agriculturalists in the true philosophy connected with the rearing and ing results arising from practical knowledge, than any other volume ever printed.

Necessity of Protection .- There is nothing, ; augarents the quantity of wool. says the author, appertaining to sheep economy. more generally neglected than the provisions of f accure. It is rapidly practised in Prassia. it. So indispensable is it held, that the author will give in his own works. He says :

These reflections appear opportune to the the sheep is kept in a healthy condition, fed reoccasion, and we have been tempted to present gularly at stated hours, but not in excess. them in the hope that they may serve to set The quality of hay is an object. If coarse, our breathren to thinking; and having made much of it will be rejected by sheep, say to them, we shall proceeded to point out a few of the extent of from 10 to 25 per cent; so, there the many things which should be attended to on the form

very important branch of American husbandry, good hay would carry one hundred head of sheep of its principals constituents, should at once commend and is campotent of being made much more so t through the winter in excellent health and con- it to the public favor.

Importance of green food .- The feeding of green food, such as polatees, apples, turnips, &c., are deemed essential to the health of the sheep. Commement wholly to dry food does not comport with that variety of condiment, which most able work." The American Shepherd," that so frequently been urged ; and consequently is followed by the disorganization of the eruption of the free. directive functions, producing costicenets and Dr. W. H. Miller of N. Y., testifies that many of should once a week be given illem. Besides country, as without doubt, it combines more preventing the occurrence of costreness and the stretches, green food tends to increase the trool management of sheep, and more of these unsers, and yolk secretions, and to import thaticity, LADD.
