THE CHOOLEEA.

This disease, at the present, is recarded with intense interest, as it is acknowledged to be to our immediate vicinity. Here, as in Europe, simost every physician has an infallibile remedy for the disease, yet all are different in their effects and results. And it will prove here as in Europe, that at least two thirds of all confirmed cases diremed that it is a fact that cannot be controverted, that there is no known remedy for this fatal scourge. One physician way, that it nearly cured, by mild evacuents: another says that it requires poweredly; ethers maintain blood-letting is certain to kill, some physician as, to cure: which the Quacks declared ther Pille to caire the Cholera in any of its singen—which would, if taken as physicipled, be cartain to kill any man or heast. The Cholera is now to be seen by Providence to torce the people of the earth to be cleanly and retrieval. Those are the only great PREVENTIVES.
