

## Barrenness.

### Cutting Fodder for Stock.

That cutting fodder for stock, especially the coarse kinds, is a subject worthy of attention among farmers, will, I believe, be admitted by all who have given it anything like a fair trial. Cut fodder, every description, is of more value for stock than hoot. I have known persons to be of opinion that a horse would thrive as well upon hay, as he would without it being cut, and a moderate allowance of oatmeal.

This may be claiming too much for it, but yet there is a stronger argument in its favor.

Horses as well as other stock, appear to relish the same fodder better for it being cut; besides the advantage of eating it in half the time, allowing more for rest. It has also a tendency to obviate the difficulty of getting cattle and horses to eat in the winter season, when they are kept upon dry fodder, such as wheat and oat straw, corn fodder, poor hay, &c. which will be much better eaten by being cut than without. I have repeatedly seen fodder offered to cattle and refused, and the same fodder passed through the cutter, returned to them apparently to their satisfaction, from the disposition they made of it. Hay that is mucky, is much improved by cutting as the dust becomes liberated by the operation. There is one other benefit to be derived, which is in mixing straw, poor hay, &c. with that which is good, by which means all will be eaten. Some, however, may object, that straw and poor hay are in a manner worthless, therefore nothing is gained. But we may recognize that the time has not long since gone by, when very many doubted there being any advantage in grinding corn and cobs together for provender; but experience have established the fact that there is economy in it; and from some experience in mixing fodder, I think the advantage fully equal to mixing cobs with corn provender.—Miss Farmer.

**TOIT vs. OPEN FARNS.**—There is great diversity of theory as well as practice among farmers in regard to open and tight barns. One class will keep all their barn doors open during day and night, and for some time after, to let the air circulate through, and carry off the warm vapor or steam from their mows of hay or grain. Another class will make their barns tight, and keep all the doors shut as closely, to keep the cold air from condensing the warm vapor or steam before it can escape from their mows of hay and grain—knowing, as they say, that if the continued air is kept confined it will become quite warm, and the vapor from their hay and grain will rise in it, and find its way out at the top of the barn; whereas, if the cold air is allowed to come in contact with their mows it will condense the vapor at or within the surface, thereby producing ruinous consequences.

Now, which of these two classes is most correct in theory and practice? In my opinion, the former class could not adopt a better way than their own, to defend their object. It is well known among farmers that it is necessary to have hay dried more for stacking, than for putting it into barns; but the little reason why it is so, is not so well known. I will attempt to give a reason, in part. Every load of hay or grain, when taken from the field, contains a proportion, perhaps one-eighth of its weight of moisture or water—unless it is dried till nearly equalled—all of which moisture should pass off by evaporation or sweating. But if it is put into a stack or mow exposed to the air, the vapor will be likely to be condensed before it escapes, which would be about equivalent to throwing out so much water—not a small amount either—one hundred pounds, or twelve and one half gallons to every twelve or fifteen hundred pounds of hay, &c. I am inclined to believe that grass might be cut in the afternoon of a dry day, in the latter part of the haying season, and put immediately into a tight barn, without danger of spoiling.—Rural New Yorker.

**CHARCOAL FOR SWINE.**—It is not, perhaps, generally known, that one of the best articles that can be given to swine while in preparation for the lard is common charcoal. The nutritive properties of this substance are great and animals have submitted to it, without any other food, for weeks together.—Grease confined, so as to be deprived of motion, and led with three grains of corn per day, and as much charcoal as they could devour, have become fat in eight days, though they were poor and thin in flesh when confined. The hog eats it voraciously after a little time, and is never sick while he has a full supply. It should always be kept in the sty, and fed to the inmates regularly every day, like other food.—Penn. Tel.

**FARMERS' DWELLINGS.**—We need a great improvement in this respect.—We need a distinctive rural style of building—comfort and convenience combined with neat and simple elegance. Nothing expensive, gaudy or obtrusive, but graceful in form, clear in ornament, with quiet, neutral colors, sweetly blending with the surrounding green, all breathing the air of peaceful calm repose on which the eye may rest with pleasure. I would gladly enlarge upon this, did time permit. The houses should not only be sheltered, but adorned with trees, none more beautiful than those of our own forests.

A choice fruit trees, of various kinds, with grapes and smaller fruits which need but little care, with ornamental shrubs and climbers should be there. None of the adornments of beauty are more graceful or attractive than fragrant and blooming vines around the rustic porch. And let there be a garden, too; it need not be a large one—not a showy, neglected patch, sometimes so misallied, intended for potatoes and cabbages, but filled with border and garden, but a neatly arranged plot for shrubs and flowers, laid out with taste, and kept with care. Cultivate a taste for flowers and teach your children to love them. In doing so you will give them new sources of pleasure—new faculties for enjoyment. And do not deem the time they bestow upon their lost time; it is well bestowed and will yield a rich return, in pure and simple joys, and the cheerful love of home.

**TO FATTEN FOWLS.**—Fowls may be fattened in four or five days, by the following process: Set some rice over the fire with skimmed milk, as much only as will serve one day. Let it boil till the rice is swelled out; add a teaspoonful of sugar. Feed them four times a day at pump, and give them as much each time as will fill them. Great care must be taken that they have nothing sour given them, as that prevents their fattening. Give them clean water, or the milk from the cow to drink. By this method the flesh will have a clear white color, and as rice goes farther than barley meal, it will be found more economical.

## Academy.

### TROY ACADEMY.

I. H. KELLUM, A. M., Principal.  
Mrs. H. KELLUM, Teacher of Music, Dancing, &c.  
Miss FRIGILLA M. SHERWOOD, Teacher in Primary Department.

The Fall and Winter session will commence on Tuesday August 23rd, and continue without interruption till Christmas when there will be a vacation during the Holy Days.

Particular attention will be paid to those preparing to teach during the Winter.

After scholars can be accommodated with board in the family of the Principal.

TERMS FOR QUARTERS.

Principals Department, \$2 to \$300  
Common English, 3 50  
High English, 4 00  
Latin, Greek and Higher Mathematics, 5 00

BY THE VOTING.

French, Painting and Drawing each, \$2 00  
Incidentals, 25

FRANCIS SMITH, President.

SETH PAINE, Sec'y.

Troy, Bradford county, Pa., Aug. 1850.

The following causes are on the list for trial at December Term 1850, as follows to wit:

ROBERTS vs. WESTMORE, app'l.

Charles Whipple, app'l.

W. C. Canfield, app'l.

Benj. M. Keen and John Moore ad. in W. Tracy.

A. O. Hart at ad. A. H. Bridge Co.

W. Wood Jr. & Co. vs. J. J. N. D. Warfield.

M. C. Mercut vs. Samuel Morton.

## Store News For the Week.

Certificates and testimonials, sufficient to fill every column of this paper, can be produced selling forth the wonderful virtues of Dr. Swayne's celebrated Family Medicine.

DR. SWAYNE'S Celebrated Compound Syrup of Wild Cherry.

THE MOST SURE REMEDY.

It would not give one bottle of Dr. Swayne's Compound Syrup of Wild Cherry, for half a dozen of any other preparations. I have tried it.

It is a simple, reliable, and safe remedy for the following diseases, viz: Influenza, Coughs, Colds, Consumption, Spitting of Blood, Palpitation of the Heart, Whooping Cough, Tickling or rising sensation in the Throat, Bronchitis, Asthma or weakness of the Nervous System, or impaired constitution from any cause, and for general debility, and for falling into a Decline, &c.

## Afflicted do not Despair!

### Another yellow fever rescued from Death by Schenck's Pulmonic Syrup.

The following case is one of the greatest triumphs of medicine over disease ever published in medical history. Read it!

Prostrated by nothing but the feeling of benevolence, and for the benefit of my afflicted fellow beings, I desire to make known a short description of my disease and the cure thereof, obtained from SCHENCK'S PULMONIC SYRUP.

Albany, August 1850. About three years ago I was afflicted with a violent cold, which settled on my chest and side, and every day I would raise considerable blood; my sleep was light and distressing. Every day I had violent fever, creeping chills, and profuse sweats at night, with great difficulty of breathing, and great loss of appetite; my system was entirely prostrated, and I was unable to get out of bed.

For the first time I had heard of the existence of this city, and I had been told that it was a good remedy for my disease. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it.

I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it.

I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it. I had heard of it from a friend who had been cured of his disease by it.
